# IMPORTANT SERVICE SAFETY PRECAUTION

- Service work should be performed only by qualified service technicians who are thoroughly familiar with all safety checks and the servicing guidelines which follow:

## WARNING

1. For continued safety, no modification of any circuit should be attempted.
2. Disconnect AC power before servicing.

**CAUTION: FOR CONTINUED PROTECTION AGAINST A RISK OF FIRE REPLACE ONLY WITH SAME TYPE FUSE.**  
 AVC SIDE: F701 (T2AL, 250V)  
 LCD SIDE: F1(T3.15AL, 250V), F3 (T2AL, 250V)  
 F6551, F6552, F6553, F6554, F6555, F6556 (T2.5AL, 250V)

- Connect the resistor connection to all exposed metal parts having a return to the chassis (antenna, metal cabinet, screw heads, knobs and control shafts, escutcheon, etc.) and measure the AC voltage drop across the resistor.

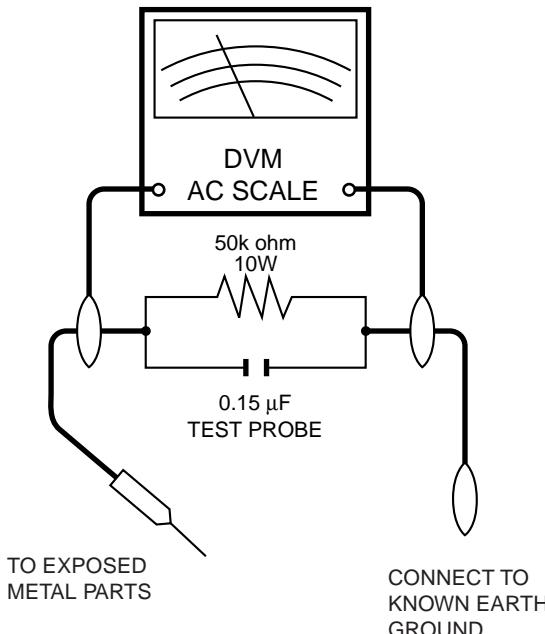

All checks must be repeated with the AC cord plug connection reversed. (If necessary, a nonpolarized adaptor plug must be used only for the purpose of completing these checks.)

Any reading of 35V peak (this corresponds to 0.7 mA. peak AC.) or more is excessive and indicates a potential shock hazard which must be corrected before returning the monitor to the owner.

## BEFORE RETURNING THE RECEIVER (Fire & Shock Hazard)

Before returning the receiver to the user, perform the following safety checks:

1. Inspect all lead dress to make certain that leads are not pinched, and check that hardware is not lodged between the chassis and other metal parts in the receiver.
2. Inspect all protective devices such as non-metallic control knobs, insulation materials, cabinet backs, adjustment and compartment covers or shields, isolation resistor-capacitor networks, mechanical insulators, etc.
3. To be sure that no shock hazard exists, check for leakage current in the following manner.
- Plug the AC cord directly into a 220~240 volt AC outlet.
- Using two clip leads, connect a 50k ohm, 10 watt resistor paralleled by a 0.15µF capacitor in series with all exposed metal cabinet parts and a known earth ground, such as electrical conduit or electrical ground connected to an earth ground.
- Use an AC voltmeter having with 5000 ohm per volt, or higher, sensitivity or measure the AC voltage drop across the resistor.

## SAFETY NOTICE

Many electrical and mechanical parts in LCD colour television have special safety-related characteristics. These characteristics are often not evident from visual inspection, nor can protection afforded by them be necessarily increased by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this manual; electrical components having such features are identified by "⚠".

and shaded areas in the **Replacement Parts List** and **Schematic Diagrams**.

For continued protection, replacement parts must be identical to those used in the original circuit.

The use of a substitute replacement parts which do not have the same safety characteristics as the factory recommended replacement parts shown in this service manual, may create shock, fire or other hazards.

# Precautions for using lead-free solder

## 1 Employing lead-free solder

"PWBs" of this model employs lead-free solder. The LF symbol indicates lead-free solder, and is attached on the PWBs and service manuals. The alphabetical character following LF shows the type of lead-free solder.

Example:

**L F a**

**Sn-Ag-Cu**

Indicates lead-free solder of tin, silver and copper.

## 2 Using lead-free wire solder

When fixing the PWB soldered with the lead-free solder, apply lead-free wire solder. Repairing with conventional lead wire solder may cause damage or accident due to cracks.

As the melting point of lead-free solder (Sn-Ag-Cu) is higher than the lead wire solder by 40°C, we recommend you to use a dedicated soldering bit, if you are not familiar with how to obtain lead-free wire solder or soldering bit, contact our service station or service branch in your area.

## 3 Soldering

As the melting point of lead-free solder (Sn-Ag-Cu) is about 220°C which is higher than the conventional lead solder by 40°C, and as it has poor solder wettability, you may be apt to keep the soldering bit in contact with the PWB for extended period of time. However, Since the land may be peeled off or the maximum heat-resistance temperature of parts may be exceeded, remove the bit from the PWB as soon as you confirm the steady soldering condition.

Lead-free solder contains more tin, and the end of the soldering bit may be easily corroded. Make sure to turn on and off the power of the bit as required.

If a different type of solder stays on the tip of the soldering bit, it is alloyed with lead-free solder. Clean the bit after every use of it.

When the tip of the soldering bit is blackened during use, file it with steel wool or fine sandpaper.

Be careful when replacing parts with polarity indication on the PWB silk.

Vertical mounting

#### CAUTION

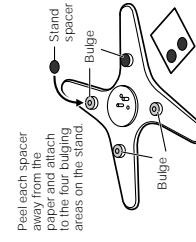

- Installing the LCD Colour TV requires special skill that should only be performed by qualified service personnel.
- Customers should not attempt to do the work themselves. SHARP bears no responsibility for improper mounting or mounting that results in accident or injury.

### Setting the AVC System with the stand

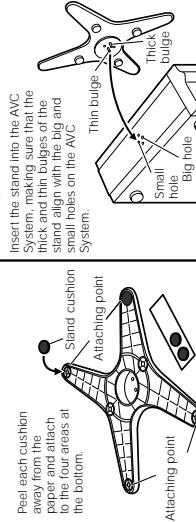

#### How to install the AVC System vertically using the stand unit.

- Use the supplied stand unit for installing the AVC System vertically in an upright position.

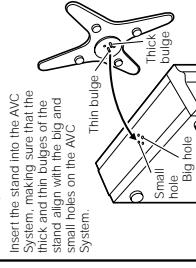

### 1 Stick each spacer to the stand as shown.

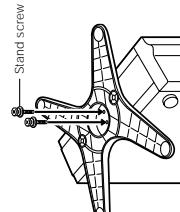

### 2 Attach each cushion to the stand as shown.

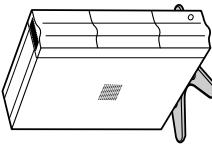

### 3 Fit the stand to the AVC System.

### 4 Attach the stand using the stand screws as shown.

### The AVC System installed vertically with the stand.

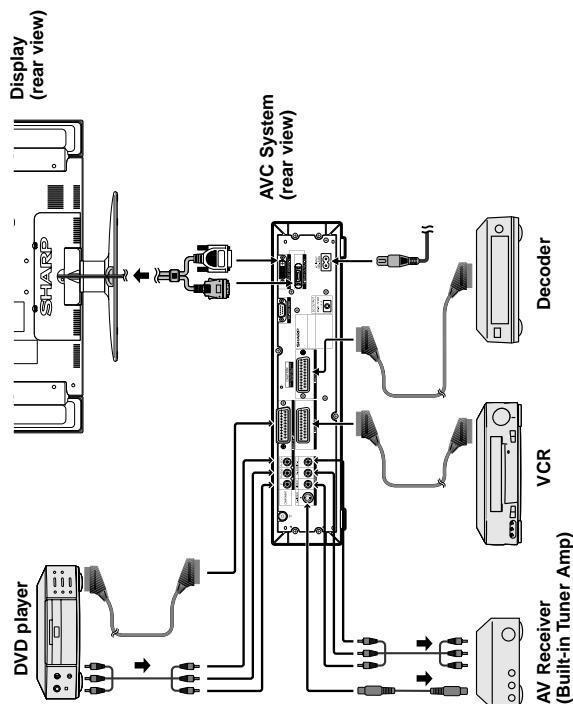

#### NOTE

- When mounting the AVC System vertically, always use the supplied stand. Be careful not to block vent holes when standing up directly on the floor or a flat surface as this can result in equipment failure.

## Using external equipment

You can connect many types of external equipment to your System, like a decoder, VCR, DVD player, PC, game console and camcorder. To view external source images, select the input source from on the remote control unit or **INPUT** on the Display.

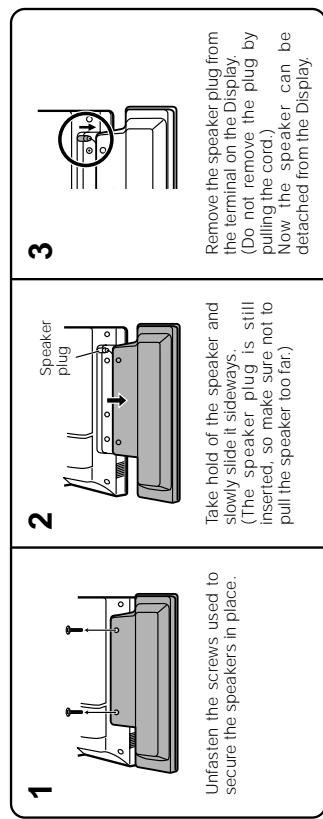

### Removing the speakers

#### This unit has detachable type speakers.

You can detach the system speakers when using external amplifier/speakers.  
Before detaching (or attaching) speakers, unplug the AC cord from the AC outlet.

#### Before attaching/detaching speakers

- Before performing work make sure to turn off the System.
- Before performing work spread cushioning over a flat surface to lay the Display on. This will prevent it from being damaged.

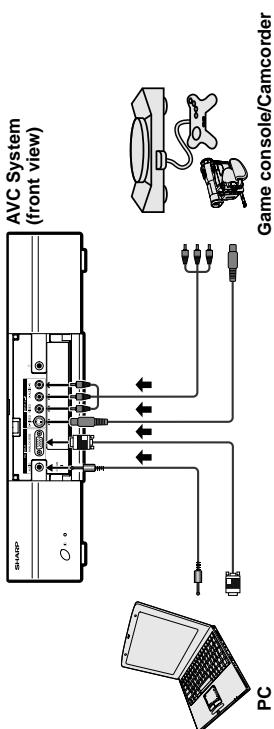

#### CAUTION

- The speaker terminals on the Display is only for the attached speakers. Do not connect any third party plug or speaker to the terminal.
- Insert the speaker plug completely into the terminal.
- Do not handle or move the Display by the speakers.

#### NOTE

- Perform the same steps for both left and right speakers.
- To attach the speakers, perform the above steps in reverse order.

#### CAUTION

- To protect all equipment, always turn off the **AVC System** before connecting to a decoder, VCR, DVD player, PC, game console, camcorder or other external equipment.
- The S-video signal only outputs when "INPUT2" or "INPUT3" is selected for "Y/C", or when from the INPUT 4 terminal (S-VIDEO). Only the S-video signal can output from the INPUT 4 terminal (S-VIDE0).

#### NOTE

- Please refer to the relevant operation manual (DVD player, PC, etc.) carefully before making connections.

## Appendix

### RS-232C port specifications

#### PC Control of the System

- When a program is set, the display can be controlled from the PC using the RS-232C terminal.
- The input signal (PCvideo) can be selected, the volume can be adjusted and various other adjustments and settings can be made, enabling automatic programmed playing.

- Attach an RS-232C cable cross-type (commercially available) to the supplied Din-D/sub RS-232C for the connections.

This operation system should be used by a person who is accustomed to using PC.

#### Communication conditions

Set the RS-232C communications settings on the PC to match the display's communications conditions. The display's communications settings are as follows:

<b>Baud rate:</b>	9,600 bps
<b>Data length:</b>	8 bits
<b>Parity bit:</b>	None
<b>Stop bit:</b>	1 bit
<b>Flow control:</b>	None

#### Communication procedure

Send the control commands from the PC via the RS-232C connector.

The Display operates according to the received command and sends a response message to the PC.

Do not send multiple commands at the same time. Wait until the PC receives the OK response before sending the next command.

# ADJUSTMENT PROCEDURES (AVC SYSTEM)

## Preparation for adjustment

1. The product has been adjusted and optimized in the factory. If the product needs to be readjusted for some reason, e.g., after parts replacement, follow the instructions shown below.
2. Control parameter values set in the in-process adjustment mode has been stored in the corresponding registers. When the product is readjusted, the contents of the registers are changed. Before readjustment, factory settings should be noted in case the contents of registers require to be restored.
3. Use a stabilized AC power supply.
4. To rewrite a program, you should note the items ("OSD MENU" and "Adjustment Values") you want to change and initialize EEPROM, and then rewrite the changes into EEPROM.

## How to enter the in-process adjustment mode

**CAUTION:** Exercise great care to hide the procedure in entering the in-process adjustment mode from the customer. Inadvertent setting changes in this mode may cause a fatal error resulting in a program being unrecoverable.

1. Entering the in-process adjustment mode:  
Connect the system cable between the display and AVC system.  
Turn on the main power while holding down the "INPUT" button and the "Volume (-)" button of the display simultaneously. The system will be activated.  
\*If you see multiple lines of blue characters on the display, you are in the in-process adjustment mode. If not (the normal activation screen opens), retry.
2. Accessing the inspection process mode:  
After activation of the system, make adjustments according to the instructions indicated on the process adjustment OSD menu screen.  
Move to the General Process Adjustment (AVC System Section Process).
3. Restoring factory settings: (At the time of "INDUSTRY INIT" execution, please wait for about 30 seconds until /// disappears.)  
When the "INDUSTRY INIT" button is selected after activation of the system, factory channel setting remains unchanged after the system exits from the in-process adjustment mode.  
Changes made by the user will default to factory settings. Note that channel setting is also initialized.
4. Exiting from the in-process adjustment mode:  
Unplug the power cable while the system is in the in-process adjustment mode to exit from the mode.  
Take care not to press the "Power" button on the remote controller or the AVC system after using factory settings to run the system.
5. OSD menu screen and menu items during manual adjustment:  
\*The layout and menu items of the OSD menu screen may somewhat vary depending on the program versions.  
\*Just rewriting a program does not cause settings to be "initial values". (Preparation for adjustment)

6. Loading the backup data and setting HDCP when the PC I/F unit is replaced

Nearly all data including factory settings, user settings, and channel setting is stored in the PC I/F unit.

The product comes with EEPROM (IC1506) on the Main unit in case the PC I/F unit is replaced; original data backed up on the EEPROM can be loaded to the new PC I/F unit.

- How to load the backup data

Select EEPROM RECOVER in the OSD menu (page 13/13) and turn the "Volume" key ON; then press "ENTER".

- How to set HDCP

After completion of adjustments, select KEY WRITE "ON" in the OSD menu (page 1/13) for manual adjustment and turn the "Volume" key ON; then press "ENTER".

# UPGRADING INSTALLED PROGRAMS

Programs installed in the product are mainly divided into the following two categories:

- Main programs (for AVC system)
- Monitoring program (for display)

**CAUTION:** Exercise great care to hide the procedure in entering the in-process adjustment mode from the customer. Inadvertent setting changes in this mode may cause a fatal error resulting in a program being unrecoverable.

## [Tools required]

- PC  
A Windows 95/98/me/2000/XP PC that has a COM port (RS-232C).  
A USB-R232C converter will be acceptable provided that it is appropriately set and has PC compatibility.
- RS-232C cross cable  
Interlink cable is also acceptable.

## [Preparations]

Rewriting a program needs the product to enter the in-process adjustment mode.

- 1) The rewriting software is supplied in the form of an exe file named e.g., "MAIN\_2002\_10\_10A.exe" (provisional).  
Create a directory on a HD and copy the software into the directory.
- 2) Double-click the file. The file will be self-extracted. Check the extracted file against the documentation accompanying with the software.
- 3) Connect the AVC System and the display unit with each other and make them ready for operation (make sure the power LEDs of the AVC System and display unit turn red).
- 4) Use an RS-232C cable to connect the PC to the AVC System.
- 5) Exercise great care to hide the procedure in entering the in-process adjustment mode from the customer.  
Press the MAIN POWER button while holding down the volume DOWN key and the INPUT key on the display unit simultaneously.  
If blue characters appear on the display, the system has entered the in-process adjustment mode successfully.  
If not (the normal activation screen opens), retry.

## [Rewriting the main program]

- 1) In the in-process adjustment mode, press the Channel Up key on the remote controller. You will move to page ("13/13" will appear on the upper left corner of the screen).
- 2) Make sure CENTER PROG UPDATE on page 13/13 is highlighted.  
(It checks that "CENTER PROG UPDATE" on page 13/13 is chosen.)
- 3) Use the VOLUME -/+ keys to change OFF to ON.
- 4) Press the ENTER key on the remote controller. Characters on the screen will disappear and the screen blacks out.
- 5) Double-click the batch file specified in the document accompanying with the software.
- 6) A black window (MS-DOS window) will open and rewriting starts automatically.  
Rewiring of the main program is now complete. Unplug the AC cord from the AVC System and turn off the system and then on again.
- 7) Enter the in-process adjustment mode and make sure the version information on the CENTER Version, OSD Version and CVIC Version lines on page 1/13 has been updated.

Adjust the data with UP/DOWN operation. (Any value beyond the limit is replaced by the limit value.)

Output data processing

Data transmission for every UP/DOWN operation (Data related to peripheral controller IC)

Execution of the last memory data when key is off

While the key is held down, the second step is performed approx. 500ms after the key operation and, after this, every single step of UP/DOWN is carried out sequentially at 135ms interval.

### 3) Cursor UP/DOWN

Select the adjustment item by pointing it with the cursor.

When upward cursor movement is done while the cursor is at the top item, the cursor goes to the bottom item.  
(In the case of multiple pages, the cursor goes to the bottom item on the previous page.)

When downward cursor movement is done while the cursor is at the bottom item, the cursor goes to the top item.  
(In the case of multiple pages, the cursor goes to the top item on the next page.)

While the key is held down, the second step is performed approx. 500ms after the key operation and, after this, every single step of UP/DOWN is carried out sequentially at 135ms interval.

## MAJOR IC FUNCTIONS INFORMATIONS

- IC2501 (MSP4418G)

IC for decoding audio signals.

It serves as an S-IF audio signal decoder and an audio data selector.

- IC2510 (IXA385WJ)

IC for controlling audio delay.

LC-30/37HV4E uses a frame buffer to process video signals. This results in delay in outputting video signals.

The IC delays output of audio signals to synchronize output of video and audio signals.

- IC1301 (CXA2069Q)

7-input, 3-output selector.

This IC selects all audio and video signals received from input terminals and the tuner, except those signals that relates to PC and components.

Video signals delivered to the IC are sent to YC separation circuits IC401 (main) and IC402 (sub). Audio signals are sent to the SR unit via IC2501 (sound processor).

- IC1401 (MM1519XQ)

4-input, 3-output video selector for component input.

This IC receives AV3 component input, AV1/3 RGB input and teletext RGB signals. Its output is for main, sub and component.

- IC1601 (SDA5550M)

Teletext processing micro-processor.

This IC receives vide signals, decodes teletext and outputs data in RGB format.

- IC401/IC402 (TC90A69)

Adaptive in-field comb filter supporting both the NTSC and PAL systems. Equipped with CNR circuit, the 3-line digital comb filter is a high-precision Y/C single chip, which provides Y/C separation of sub image signals received from IC1301.

- IC403/IC404 (ML6428C1)

6.7 MHz low-pass filter.

- IC801/IC802 (TB1274AF)

IC for synchronous processing of video and chroma demodulation for PAL/NTSC/SECAM colour TV.

# DESCRIPTION OF SCHEMATIC DIAGRAM

## VOLTAGE MEASUREMENT CONDITION:

- When the exclusive-use AC adapter is used, the colour bar signal of colour bar generator for service is input to get the normal screen. When the audio is minimized, the voltage value is measured with the 20 kΩ/V tester.

## WAVEFORM MEASUREMENT CONDITION:

- When the exclusive-use AC adapter is used, the colour density, lightness and colour hue are set to the center position, and the signal of colour bar generator for service is observed to get waveform.
- indicates waveform check points (See chart, waveforms are measured from point indicated to chassis ground.)

## INDICATION OF RESISTOR & CAPACITOR:

### RESISTOR

- The unit of resistance “Ω” is omitted.  
(K=kΩ=1000 Ω, M=MΩ).
- All resistors are ± 5%, unless otherwise noted.  
(J= ± 5%, F= ± 1%, D= ± 0.5%)
- All resistors are Carbon type, unless otherwise noted.  
◎: Solid                    W : Cement  
◎: Oxide Film              T : Special  
◎: Metal Coating

### CAPACITOR

- All capacitors are mF, unless otherwise noted.  
(P=pF=mmF).
- All capacitors are Ceramic type, unless otherwise noted.  
(ML) : Mylar              (TA) : Tantalum  
(PF) : Polypro Film        (ST) : Styrol
