## CUIDADO ! COMPONENTES SENSÍVEIS A DESCARGAS ELETRÓSTÁTICAS

Alguns semicondutores (estado sólido) podem ser facilmente danificados pela eletricidade estática. Tais componentes são comumente chamados de "componentes sensíveis eletrostaticamente" (*Electrostatically Sensitive Devices - ESD*). Exemplos típicos de *ESD's* são os circuitos integrados, transistores de efeito de campo e *chips* semicondutores. As técnicas a seguir devem ser utilizadas para ajudar a reduzir a incidência de danos aos componentes causados por eletricidade estática.

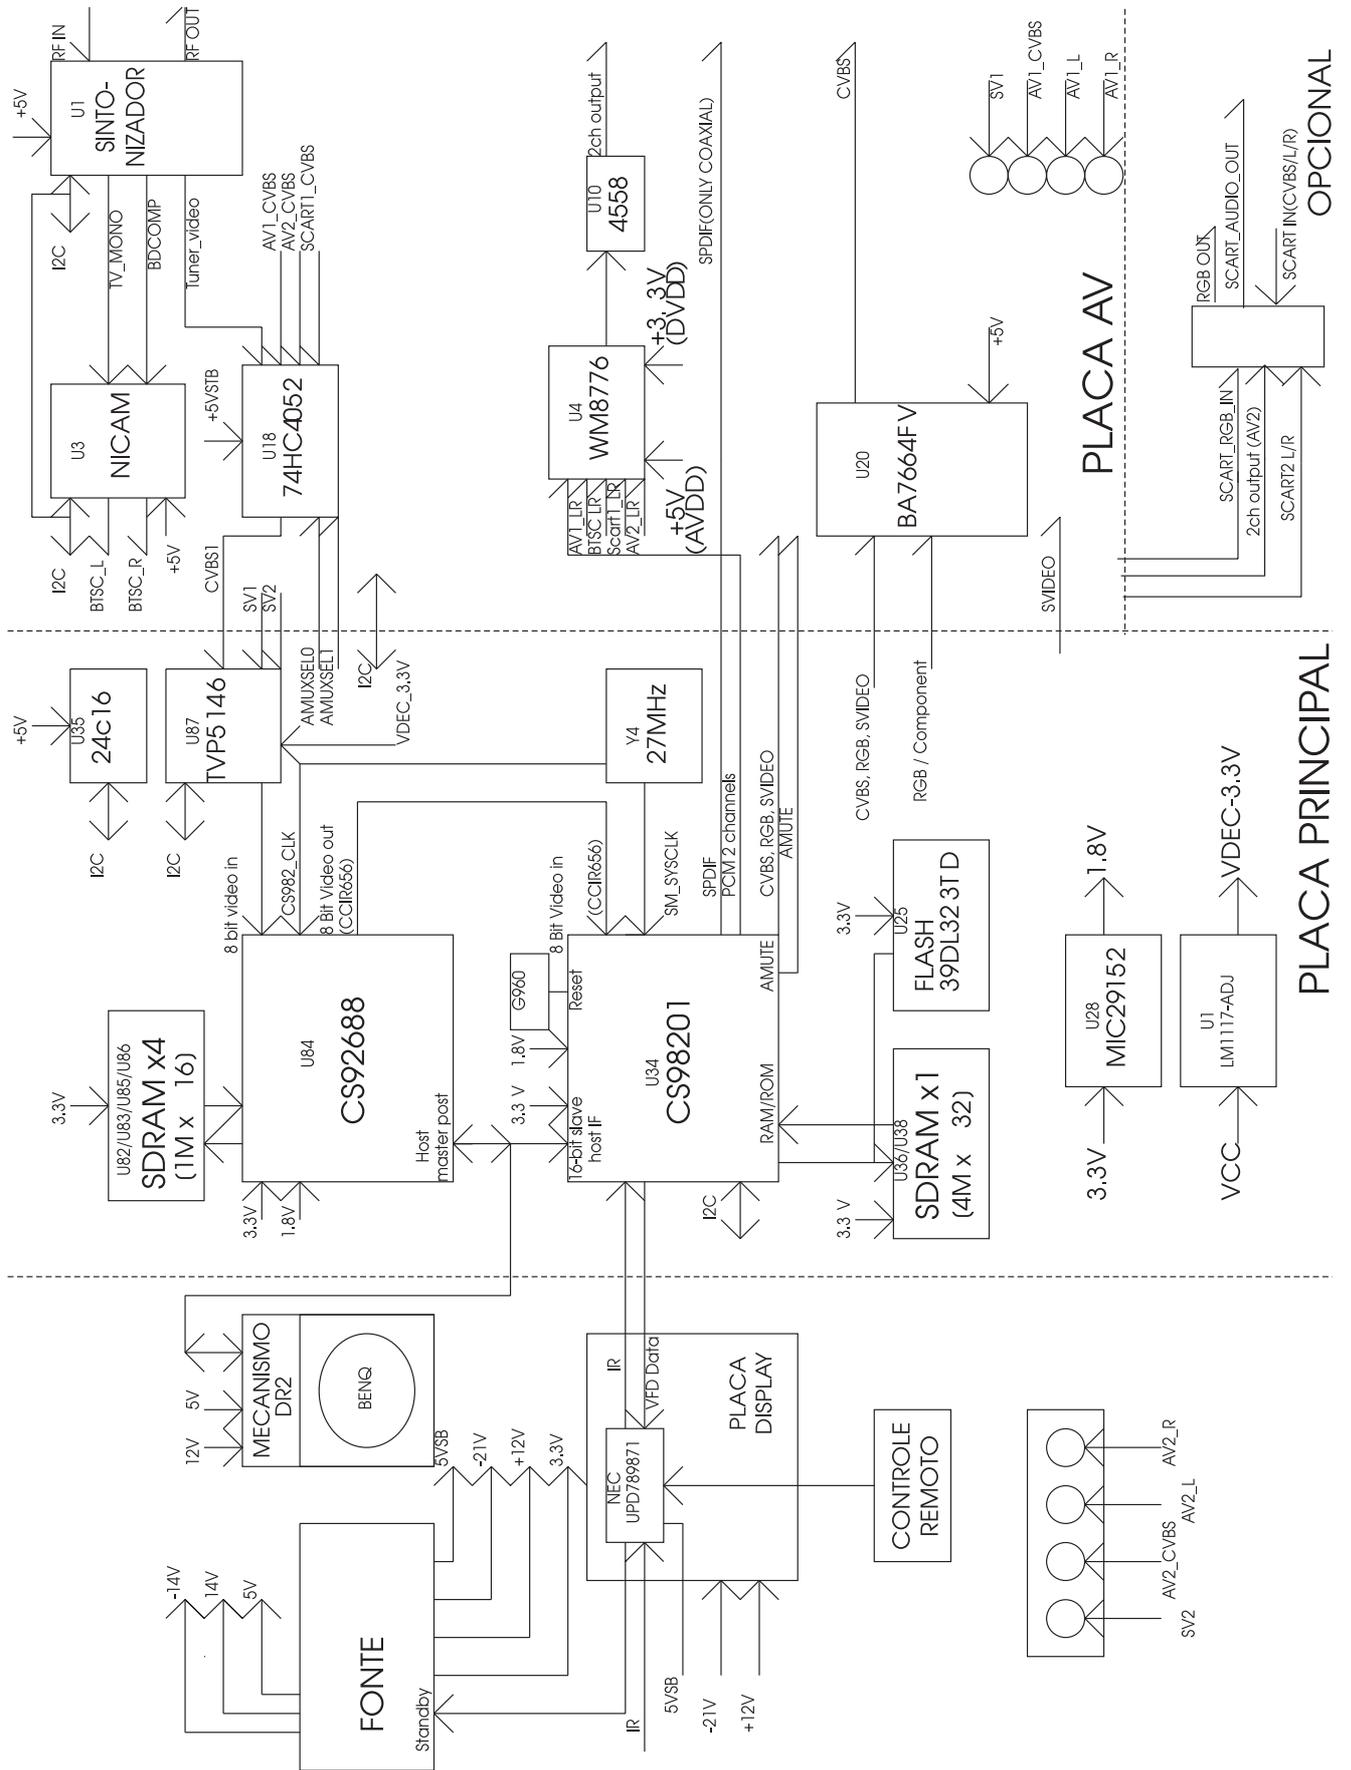

1. Mantenha o componente em sua embalagem original até o momento de sua utilização. Se necessário armazená-lo de outro modo, acondicione-o exclusivamente em material anti-estático.
2. Prepare uma estação de trabalho anti-estática para manuseio da placa montada e/ou componente *ESD*:
  - 2.1. Disponha de uma manta dissipativa sobre a bancada/mesa de trabalho.
  - 2.2. Providencie uma pulseira para descarga de eletricidade estática disponível no comércio. Efetue diariamente a aferição da pulseira.
  - 2.3. Aterre ambos, manta e pulseira, a uma malha reconhecidamente aterrada.
  - 2.4. Disponha todo o material necessário ao trabalho sobre a manta; minimize os movimentos. No momento em que for manusear a placa/componente, coloque a pulseira.

### IMPORTANTE !

**Assegure-se de que não haja qualquer potencial que seja aplicado ao chassi ou circuito bem como retire a pulseira antes de energizar a unidade sob teste/reparo a fim de evitar riscos de choque elétrico.**

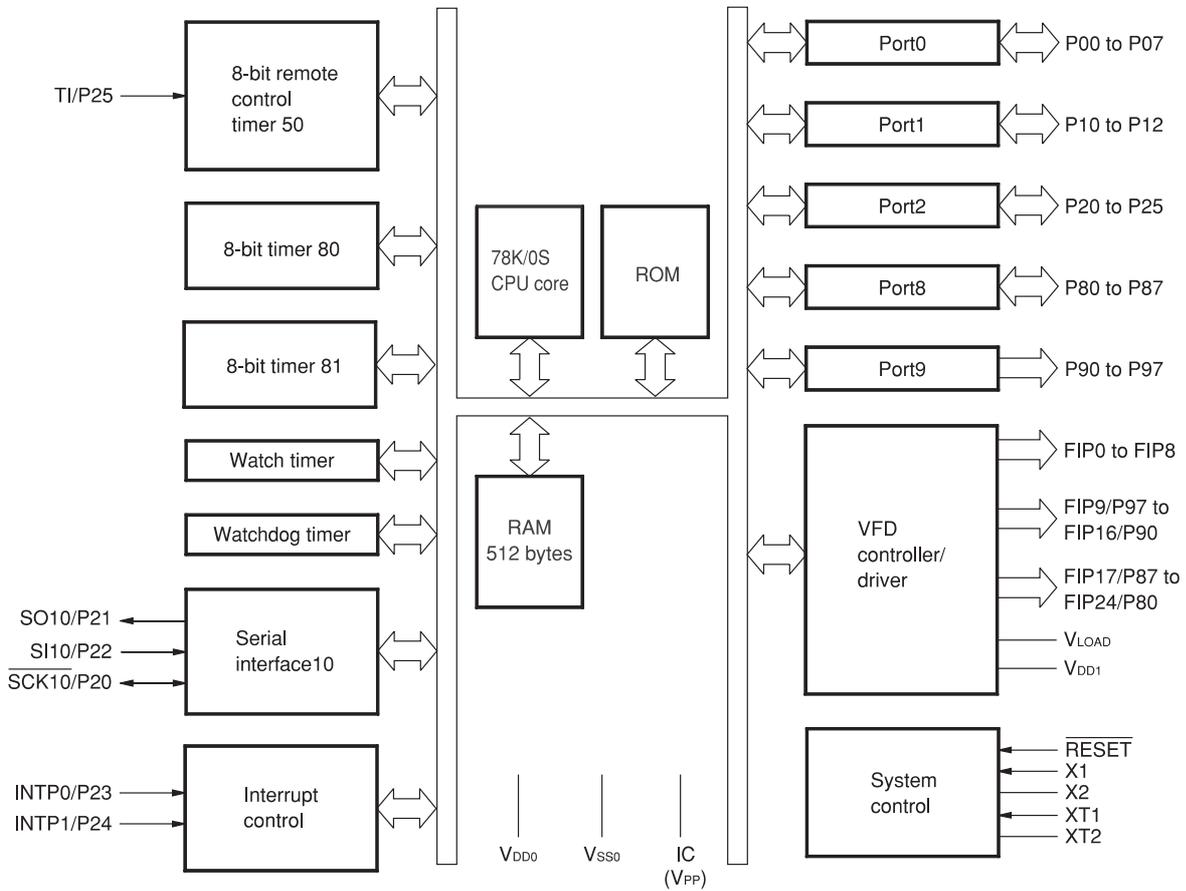

3. Use somente ferros-de-soldar com a ponta aterrada para soldar ou retirar componentes sensíveis à eletrostática.
4. Não utilize produtos químicos cujo proPElente usado seja freon. Eles podem gerar cargas elétricas suficientes para danificar componentes *ESD*.
