# SAFETY PRECAUTIONS

## IMPORTANT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special safety-related characteristics. These parts are identified by  $\Delta$  in the Schematic Diagram and Replacement Parts List.  
It is essential that these special safety parts should be replaced with the same components as recommended in this manual to prevent X-RADIATION, Shock, Fire, or other Hazards.  
Do not modify the original design without permission of manufacturer.

### General Guidance

An **Isolation Transformer** should always be used during the servicing of a receiver whose chassis is not isolated from the AC power line. Use a transformer of adequate power rating as this protects the technician from accidents resulting in personal injury from electrical shocks.

It will also protect the receiver and its components from being damaged by accidental shorts of the circuitry that may be inadvertently introduced during the service operation.

If any fuse (or Fusible Resistor) in this TV receiver is blown, replace it with the specified.

When replacing a high wattage resistor (Oxide Metal Film Resistor, over 1W), keep the resistor 10mm away from PCB.

Keep wires away from high voltage or high temperature parts.

Due to high vacuum and large surface area of picture tube, extreme care should be used in **handling the Picture Tube**. Do not lift the Picture tube by its Neck.

### X-RAY Radiation

#### Warning:

The source of X-RAY RADIATION in this TV receiver is the High Voltage Section and the Picture Tube.  
For continued X-RAY RADIATION protection, the replacement tube must be the same type tube as specified in the Replacement Parts List.

To determine the presence of high voltage, use an accurate high impedance HV meter.

Adjust brightness, color, contrast controls to minimum.

Measure the high voltage.

The meter reading should indicate

23.5 ; 1.5KV: 14-19 inch, 26 ; 15KV: 19-21 inch,  
29.0 ; 1.5KV: 25-29 inch, 30.0 ; 1.5KV: 32 inch

If the meter indication is out of tolerance, immediate service and correction is required to prevent the possibility of premature component failure.

### Before returning the receiver to the customer,

always perform an **AC leakage current check** on the exposed metallic parts of the cabinet, such as antennas, terminals, etc., to be sure the set is safe to operate without damage of electrical shock.

#### Leakage Current Cold Check(Antenna Cold Check)

With the instrument AC plug removed from AC source, connect an electrical jumper across the two AC plug prongs. Place the AC switch in the on position, connect one lead of ohm-meter to the AC plug prongs tied together and touch other ohm-meter lead in turn to each exposed metallic parts such as antenna terminals, phone jacks, etc.

If the exposed metallic part has a return path to the chassis, the measured resistance should be between  $1M\Omega$  and  $5.2M\Omega$ .

When the exposed metal has no return path to the chassis the reading must be infinite.

An other abnormality exists that must be corrected before the receiver is returned to the customer.

#### Leakage Current Hot Check (See below Figure)

Plug the AC cord directly into the AC outlet.

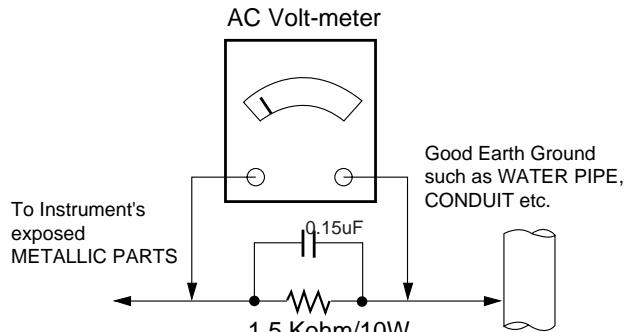

**Do not use a line Isolation Transformer during this check.**  
Connect 15K/10watt resistor in parallel with a 0.15uF capacitor between a known good earth ground (Water Pipe, Conduit, etc.) and the exposed metallic parts.

Measure the AC voltage across the resistor using AC voltmeter with 1000 ohms/volt or more sensitivity.

Reverse plug the AC cord into the AC outlet and repeat AC voltage measurements for each exposed metallic part. Any voltage measured must not exceed 0.75 volt RMS which corresponds to 0.5mA.

In case any measurement is out of the limits specified, there is possibility of shock hazard and the set must be checked and repaired before it is returned to the customer.

#### Leakage Current Hot Check circuit

# SERVICING PRECAUTIONS

**CAUTION:** Before servicing receivers covered by this service manual and its supplements and addenda, read and follow the **SAFETY PRECAUTIONS** on page 3 of this publication.

**NOTE:** If unforeseen circumstances create conflict between the following servicing precautions and any of the safety precautions on page 3 of this publication, always follow the safety precautions. Remember: Safety First.

## General Servicing Precautions

1. Always unplug the receiver AC power cord from the AC power source before;
  - a. Removing or reinstalling any component, circuit board module or any other receiver assembly.
  - b. Disconnecting or reconnecting any receiver electrical plug or other electrical connection.
  - c. Connecting a test substitute in parallel with an electrolytic capacitor in the receiver.
- CAUTION:** A wrong part substitution or incorrect polarity installation of electrolytic capacitors may result in an explosion hazard.
- d. Discharging the picture tube anode.
2. Test high voltage only by measuring it with an appropriate high voltage meter or other voltage measuring device (DVM, FETVOM, etc) equipped with a suitable high voltage probe. Do not test high voltage by "drawing an arc".
3. Discharge the picture tube anode only by (a) first connecting one end of an insulated clip lead to the degaussing or kine aquadag grounding system shield at the point where the picture tube socket ground lead is connected, and then (b) touch the other end of the insulated clip lead to the picture tube anode button, using an insulating handle to avoid personal contact with high voltage.
4. Do not spray chemicals on or near this receiver or any of its assemblies.
5. Unless specified otherwise in this service manual, clean electrical contacts only by applying the following mixture to the contacts with a pipe cleaner, cotton-tipped stick or comparable nonabrasive applicator; 10% (by volume) Acetone and 90% (by volume) isopropyl alcohol (90%-99% strength)

**CAUTION:** This is a flammable mixture.

Unless specified otherwise in this service manual, lubrication of contacts is not required.

6. Do not defeat any plug/socket B+ voltage interlocks with which receivers covered by this service manual might be equipped.
7. Do not apply AC power to this instrument and/or any of its electrical assemblies unless all solid-state device heat sinks are correctly installed.
8. Always connect the test receiver ground lead to the receiver chassis ground before connecting the test receiver positive lead.

Always remove the test receiver ground lead last.

9. *Use with this receiver only the test fixtures specified in this service manual.*

**CAUTION:** Do not connect the test fixture ground strap to any heatsink in this receiver.

## Electrostatically Sensitive (ES) Devices

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called *Electrostatically Sensitive (ES) Devices*. Examples of typical ES devices are integrated circuits and some field-effect

transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by static by static electricity.

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed to prevent potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an anti-static type solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

**CAUTION:** Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.

8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES device.)

## General Soldering Guidelines

1. Use a grounded-tip, low-wattage soldering iron and appropriate tip size and shape that will maintain tip temperature within the range of 500 °F to 600 °F.
2. Use an appropriate gauge of RMA resin-core solder composed of 60 parts tin/40 parts lead.
3. Keep the soldering iron tip clean and well tinned.
4. Thoroughly clean the surfaces to be soldered. Use a small wirebristle (0.5 inch, or 1.25cm) brush with a metal handle. Do not use freon-propelled spray-on cleaners.
5. Use the following unsoldering technique
  - a. Allow the soldering iron tip to reach normal temperature. (500 °F to 600 °F)
  - b. Heat the component lead until the solder melts.
  - c. Quickly draw the melted solder with an anti-static, suction-type solder removal device or with solder braid.
- CAUTION:** Work quickly to avoid overheating the circuit board printed foil.
6. Use the following soldering technique
  - a. Allow the soldering iron tip to reach a normal temperature (500 °F to 600 °F)
  - b. First, hold the soldering iron tip and solder the strand against the component lead until the solder melts.

- c. Quickly move the soldering iron tip to the junction of the component lead and the printed circuit foil, and hold it there only until the solder flows onto and around both the component lead and the foil.
- CAUTION:** Work quickly to avoid overheating the circuit board printed foil.
- d. Closely inspect the solder area and remove any excess or splashed solder with a small wire-bristle brush.

### **IC Remove/Replacement**

Some chassis circuit boards have slotted holes (oblong) through which the IC leads are inserted and then bent flat against the circuit foil. When holes are the slotted type, the following technique should be used to remove and replace the IC. When working with boards using the familiar round hole, use the standard technique as outlined in paragraphs 5 and 6 above.

#### **Removal**

1. Desolder and straighten each IC lead in one operation by gently prying up on the lead with the soldering iron tip as the solder melts.
2. Draw away the melted solder with an anti-static suction-type solder removal device (or with solder braid) before removing the IC.

#### **Replacement**

1. Carefully insert the replacement IC in the circuit board.
2. Carefully bend each IC lead against the circuit foil pad and solder it.
3. Clean the soldered areas with a small wire-bristle brush. (It is not necessary to reapply acrylic coating to the areas).

### **"Small-Signal" Discrete Transistor**

#### **Removal/Replacement**

1. Remove the defective transistor by clipping its leads as close as possible to the component body.
2. Bend into a "U" shape the end of each of three leads remaining on the circuit board.
3. Bend into a "U" shape the replacement transistor leads.
4. Connect the replacement transistor leads to the corresponding leads extending from the circuit board and crimp the "U" with long nose pliers to insure metal to metal contact then solder each connection.

### **Power Output, Transistor Device**

#### **Removal/Replacement**

1. Heat and remove all solder from around the transistor leads.
2. Remove the heatsink mounting screw (if so equipped).
3. Carefully remove the transistor from the heat sink of the circuit board.
4. Insert new transistor in the circuit board.
5. Solder each transistor lead, and clip off excess lead.
6. Replace heatsink.

### **Diode Removal/Replacement**

1. Remove defective diode by clipping its leads as close as possible to diode body.
2. Bend the two remaining leads perpendicular to the circuit board.
3. Observing diode polarity, wrap each lead of the new diode around the corresponding lead on the circuit board.
4. Securely crimp each connection and solder it.
5. Inspect (on the circuit board copper side) the solder joints of the two "original" leads. If they are not shiny, reheat them and if necessary, apply additional solder.

### **Fuse and Conventional Resistor Removal/Replacement**

1. Clip each fuse or resistor lead at top of the circuit board hollow stake.
  2. Securely crimp the leads of replacement component around notch at stake top.
  3. Solder the connections.
- CAUTION:** Maintain original spacing between the replaced component and adjacent components and the circuit board to prevent excessive component temperatures.

### **Circuit Board Foil Repair**

Excessive heat applied to the copper foil of any printed circuit board will weaken the adhesive that bonds the foil to the circuit board causing the foil to separate from or "lift-off" the board. The following guidelines and procedures should be followed whenever this condition is encountered.

#### **At IC Connections**

To repair a defective copper pattern at IC connections use the following procedure to install a jumper wire on the copper pattern side of the circuit board. (Use this technique only on IC connections).

1. Carefully remove the damaged copper pattern with a sharp knife. (Remove only as much copper as absolutely necessary).
2. carefully scratch away the solder resist and acrylic coating (if used) from the end of the remaining copper pattern.
3. Bend a small "U" in one end of a small gauge jumper wire and carefully crimp it around the IC pin. Solder the IC connection.
4. Route the jumper wire along the path of the out-away copper pattern and let it overlap the previously scraped end of the good copper pattern. Solder the overlapped area and clip off any excess jumper wire.

#### **At Other Connections**

Use the following technique to repair the defective copper pattern at connections other than IC Pins. This technique involves the installation of a jumper wire on the component side of the circuit board.

1. Remove the defective copper pattern with a sharp knife. Remove at least 1/4 inch of copper, to ensure that a hazardous condition will not exist if the jumper wire opens.
2. Trace along the copper pattern from both sides of the pattern break and locate the nearest component that is directly connected to the affected copper pattern.
3. Connect insulated 20-gauge jumper wire from the lead of the nearest component on one side of the pattern break to the lead of the nearest component on the other side. Carefully crimp and solder the connections.

**CAUTION:** Be sure the insulated jumper wire is dressed so the it does not touch components or sharp edges.

# SPECIFICATIONS

**NOTE :** Specifications and others are subject to change without notice for improvement.

- **Video input system:**  
Multi 26 System  
(Refer to Table 1)
- **Intermediate Frequency**  
Vision IF : 38.9MHz  
Color IF : 34.47MHz \*SECAM : 38.9-4.25MHz  
35.32MHz(M) 38.9-4.40625MHz

# CONTROLS DESCRIPTION

All the functions can be controlled with the remote control handset. Some functions can also be adjusted with the buttons on the front panel of the set.

## Remote control handset

Before you use the remote control handset, please install the batteries. See the next page.

### 1. POWER

switches the set on from standby or off to standby.

### 2. SLEEP

sets the sleep timer.

### 3. STILL

freezes motion of the picture.

### 4. NUMBER BUTTONS

switches the set on from standby or directly select a number.

### 5. I/II

selects the language during dual language broadcast.  
selects the sound output. (option)

### 6. TURBO SOUND BUTTON

selects Turbo sound.

### TURBO PICTURE BUTTON

selects Turbo picture.

### 7. TELETEXT BUTTONS (option)

These buttons are used for teletext.

For further details, see the 'Teletext' section.

### 8. MENU

selects a menu.

### 9. MUTE

switches the sound on or off.

### 10. D / E (Programme Up/Down)

selects a programme or a menu item.  
switches the set on from standby.

### F / G (Volume Up/Down)

adjusts the volume.  
adjusts menu settings.

### OK

accepts your selection or displays the current mode.

**11. LIST**  
displays the programme table.

**12. VCR BUTTONS**  
control a LG video cassette recorder.

**13. EYE**  
switches the eye function on or off.

**14. TV/AV**  
selects TV or AV mode.  
clears the menu / text from the screen.  
switches the set on from standby.

#### **15. PIP BUTTONS**

**PIP**  
switches the sub picture on or off.

**PR +/-**  
selects a programme for the sub picture.

**SWAP**  
alternates between main and sub picture.

**INPUT**  
selects the input mode for the sub picture.

**SIZE**  
adjusts the sub picture size.

**STILL**  
freezes motion of the sub picture.

**POSITION**  
relocates the sub picture in clockwise direction.

**SCAN**  
switches on or off the programme scan mode through 12 sub pictures.

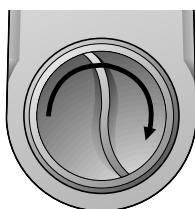

**16. SWAP**  
returns to the previously viewed programme.

**Note :** In teletext mode, the **PR +/-**, **SWAP** and **INPUT** buttons are used for teletext function.

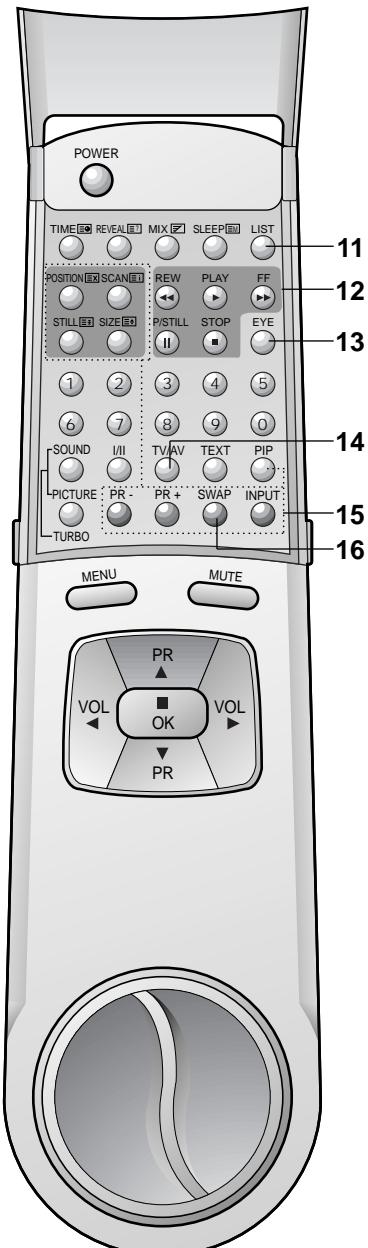

#### **Internal generator charge**

The remote control handset can be charged with the internal electric generator. To charge the remote control handset do the followings;

1. In first use,  
20 rotation of the handle in the arrow direction as picture below  
-> waiting for one minute -> 20 rotation again -> waiting for one minute again -> 20 rotation again -> beginning to use
2. In usual use  
5 or 6 rotation -> resuming to use

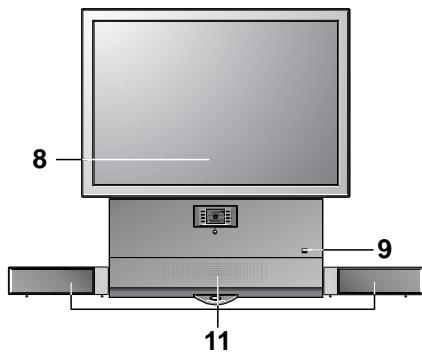

**Note :** Do not rotate the handle too rapidly for the protection of the remote control handset.

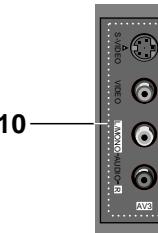

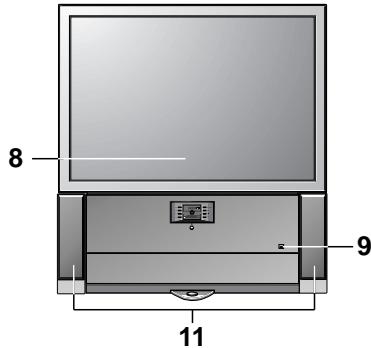

# Location and function of controls

## Front panel

### • PT-48/53A82 series

### • PT-43A82 series

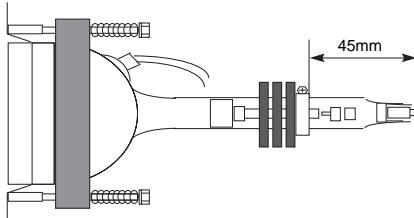

(Side panel)

1. **MAIN POWER (ON/OFF)**  
switches the set on or off.
2. **F / G (Volume Up/Down)**  
adjusts the volume.  
adjusts menu settings.
3. **POWER/STANDBY INDICATOR**  
illuminates brightly when the set is in standby mode.  
dims when the set is switched on.
4. **DIGITAL INDEX**  
displays information which is input to the set with three different brightness.
5. **MENU**  
selects a menu.
6. **OK**  
accepts your selection or displays the current mode.
7. **TV/AV**  
selects TV or AV mode.  
clears the menu / text from the screen.  
switches the set on from standby.
8. **REMOTE CONTROL SENSOR**
9. **EYE (option)**  
adjusts picture according to the surrounding conditions.
10. **AUDIO/VIDEO IN SOCKETS (AV3)**  
Connect the audio/video out sockets of external equipment to these sockets.
11. **S-VIDEO/AUDIO IN SOCKETS (S-AV)**  
Connect the video out socket of an S-VIDEO VCR to the **S-VIDEO** socket.
12. **CENTRE SPEAKER (PT-48/53A82 series only)**
13. **LEFT/RIGHT LOUD-SPEAKERS**  
Only in PT-48/53A82 series model, the left/right loud-speakers are detachable and need to be connected to the **SPEAKER OUT** sockets on the back panel of the set as indicated by red (+) and black (-) knobs.  
**Note :** Before placing the speakers, screw the speaker legs to the holes on them.
- \* **CASTERS (on the bottom)**  
turn and move the set easily.

# ADJUSTMENT INSTRUCTIONS

## Caution :

1. Because this is not a hot chassis, it is not necessary to use an isolation transformer.  
However, the use of isolation transformer will help protect test instrument.
2. Adjustment must be done in the correct order.
3. The receiver must be operated for about 60 minutes prior to the adjustment.  
Pre-heattrun must be operated receiving moving pictures or 100% white pattern.

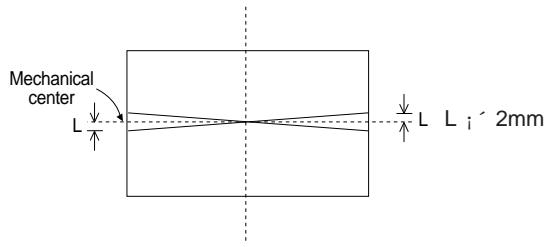

## o Raster Slant/Focus Adjustment

### 1. Preliminary steps

- 1) The lens focus and electrical focus must be provisional alignment.
- 2) Tune the TV set to receive a EU 05 CH.
- 3) Press the buttons of Remote Controller for adjustment (SVC\$ \$ 5\$ OK\$ ) to reset the convergence.

### 2. Adjustment

- 1) Set only green to be appeared on the screen.
- 2) Carefully rotate the DY of the green CRT so that the slant of raster become the following figure.

- 3) Set two color (R or B and G) to be appeared on the screen.
- 4) Set the slant of Red or Blue correspond to the green.

Note)

1. Tighten the tightening iron after loose completely. tighten iron which fixing DY when adjusting raster slant and set position.
2. Never control to the tightening iron which fixed, it's condition is not untied.

## o Beam Alignment Adjustment

### 1. Test Equipment

Signal Generator can produce DOT pattern

### 2. Preliminary steps

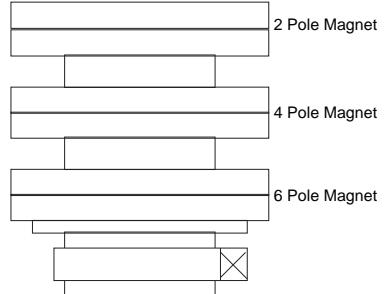

- 1) Heat run over 60 minutes.
- 2) Pre-adjust Raster slope, Raster position & Lens focus.
- 3) Check if the Magnet is located 45mm from the end of CRT.
- 4) Receive DOT pattern.

### 3. 2-Pole Magnet Adjustment

- 1) Make Green raster using lens cover.
- 2) Check the center position of DOT pattern on the center of the screen after turning Green focus volume left.
- 3) Turning green focus volume right and adjust 2-Pole magnet so the position to coincide that of item 2).
- 4) Adjust not to shift the screen by turning green focus volume left & right.
- 5) If the screen shifts, readjust 2)~4).
- 6) Do the same method in Red and Blue. Here, be careful not to be stained.

### 4. Beam Shape (4 & 6-Pole Magnet) Adjustment

- 1) Do after 2-Pole magnet adjustment.
- 2) Make Green raster using lens cover and turn the focus volume right.
- 3) Make the dot in the center a perfect circle using 4 & 6-Pole magnet.
- 4) Do the same method in Red & Blue.
- 5) Fasten the Magnet after adjustment.
- 6) Adjust focus accurately.

## o Centering Magnet Adjustment

### 1. Preliminary steps

- 1) Tune the TV set to receive a EU 05 CH.
- 2) Press the buttons of Remote Controller for adjustment (SVC\$ \$ 5\$ OK\$ ) to reset the convergence.

### 2. Adjustment

#### 1) LG Convergence assy

Make green raster using lens cover and coincide horizontal/vertical center lines of pattern with those of screen.

#### 2) SGS-THOMSON Convergence assy

Adjust until the center of blue signal is shifted upto 30mm left from that of green signal and center of red signal is shifted upto 30mm right from that of green signal with turning the centring magnet.

- 3) After adjusting, recover original convergence data.

## o High Voltage Regulation Adjustment

### 1. Test Equipment

Digital Multi-Meter(DMM)

### 2. Preliminary steps

1) Switch picture mode to STANDARD in no signal input.

### 3. Adjustment

- 1) Connect "+" terminal(Red) of DMM to the Anode of D432 and "-" terminal(Black) to the Heat Sink of Q406.
- 2) Adjust VR401 so that the D432 terminal voltage is 21.3±0.1V.

## o CUT-OFF Adjustment

- 1) Press the "SVC" button and then press the "≡" button on the remote controller for adjustment to display horizontal line.(Even though you enter into the SVC mode, the horizontal line might not be seen according to the position of Screen Volume.)
- 2) Adjust Screen Volume (R/G/B) in Focus Pack until brightness of red/blue/green horizontal line is about not to be seen.(At this moment, brightness of red, blue or green horizontal line should be equal to one another.)
- 3) Exit the adjustment mode by pressing the "≡" button.

## o Deflection Adjustment

### 1. Preliminary steps

- 1) Adjust differently based on input signal such as NTSC or PAL.
- 2) NTSC adjustment should be done in STANDARD mode of picture after receiving 13CH signal, and PAL adjustment should be done in STANDARD mode of picture after receiving EU05 CH.
- 3) Reset the data in convergence adjustment mode, quit the mode.  
Convergence Mode : SVC,   
Data reset : 5 , OK  
Adjustment mode out : 

### 2. PAL Mode Deflection Adjustment

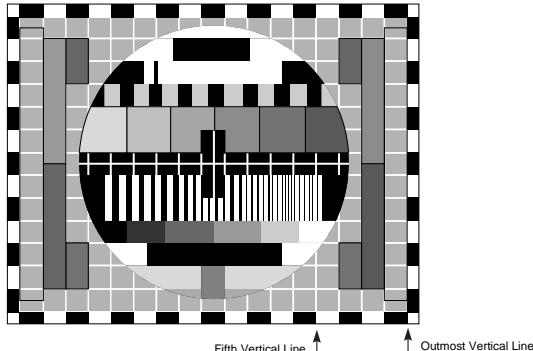

- 1) At SVC mode, press the YELLOW key get into the deflection adjustment mode.

#### 2) VS (Vertical Shift)

Adjust until geometric vertical center line of the screen is accord with the vertical center line of the screen JIG at EU 05 CH by pressing the VOLUME F , G button.

#### 3) VA (Vertical Amplitude)

Adjust until fifth vertical line from upper and lower center of the screen is accord with the edge of the frame.

#### 4) HS (Horizontal Shift)

Adjust so that the horizontal center line of a digital circle pattern is in accord with geometric horizontal center of the CPT.

#### 5) EW (East-west Width)

Adjust until the outermost left and right vertical line of the screen is accord with the edge of the frame.

#### 6) EP (East-west Parabolar)

Adjust so that middle portion of the outermost left and right vertical line looks like parallel with vertical lines of the CPT.

#### 7) ET(East-west Trapezium)

Adjust to make the length of top horizontal line same with it of the bottom horizontal line.

#### 8) A-ANG(AFC Angle)

#### 9) A-BOW(AFC BOW)

#### 10) U-C(Upper Cotner Pincushion)

#### 11) L-C(Lower Cotner Pincushion)

#### 12) U-VL(Upper Vertical Linearity)

#### 13) L-VL(Lower Vertical Linearity)

#### 14) VL (Vertical Linearity)

Adjust so that the boundary line between upper and lower half is in accord with geometric horizontal center of the CPT.

#### 15) SC (Vertical "S" Correction)

Adjust so that all distance between each horizontal lines are to be the same.

#### 16) V-ASP(Vertical Aspect Ratio)

Adjust the vertical aspect ratio.

#### 17) Store the adjusted data in EEPROM by pressing the "OK" button before exiting adjustment mode.

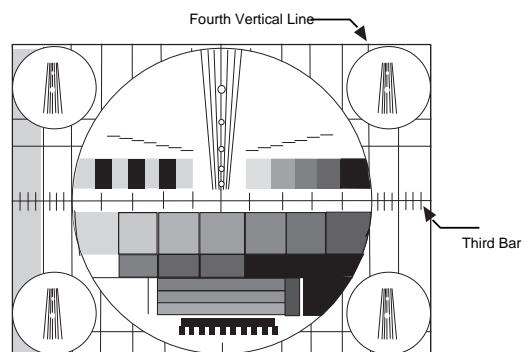

#### 18) Restore the convergence correction data by pressing the "TV/AV" button before exiting adjustment mode

### 3. NTSC Mode Deflection Adjustment

- 1) Adjust vertical size (VA Adjustment) until fourth vertical bar from upper and lower center screen is accord with the edge of the frame.

- 2) Adjust horizontal size (EW Adjustment) until third bar to indicate horizontal size of circle is accord with the edge of the frame.

- 3) Do other adjustments the same as in PAL mode.

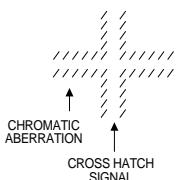

## o Lens Focus & Electronic Focus Adjustment

### 1. Preliminary steps

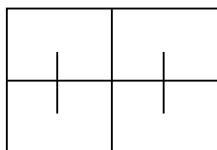

- 1) Electronic focus, Raster slope & Raster position must be pre-adjusted.
- 2) Heat-run over 60 minutes.
- 3) Receive Crosshatch pattern.
- 4) Adjustment must be operated in a dark room (simple dark room) and pay attention not to touch the lens during adjustment.
- 5) Screen the optional two lens with a cover so that the single color is appeared on the screen.
- 6) When turn the light the lens at front, chromatic aberration which appeared in bright line of cross-Hatch signal changed as below.

Lens	Change of chromatic aberration
Red	Orange $\rightarrow$ Scarlet
Green	Blue $\rightarrow$ Red
Blue	Purple $\rightarrow$ Green

### 2. G-lens Adjustment

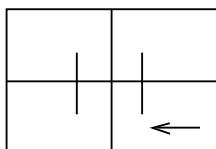

- 1) Turn the lens until the chromatic aberration changed Blue to Red point.
- 2) Viewing the all screen, in no case of the chromatic aberration appeared slimly within 3.5 cross-Hatch of the picture center. At this time, in case that the red chromatic aberration's bright line isn't equal, adjust G-lens so that the red chromatic aberration is appeared more than previous time.

- 3) Switching the signal to 13CH and operate adjustment minutely.
- 4) Adjust G-focus control volume of focus pack so that the external big circle's part appeared clearly.
- 5) Adjust accurately by repeat the upper control.
- 6) Especially, noting to the G-light because it influenced on picture's function.

### 3. R-lens Adjustment

- 1) Turn the lens until the chromatic aberration changed orange to scarlet.
- 2) Adjust the chromatic aberration so that it located center correctly.
- 3) Switching the signal to 13CH and adjust it as same method of G-lens.

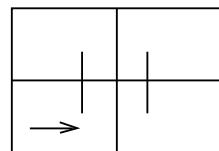

- 4) Adjust as same method of G-lens with Red focus control volume of focus pack.

### 4. B- lens Adjustment

- 1) Turn the lens until the chromatic aberration changed purple

to green which of 3.5 Cross-Hatch part from picture's center toward left.

- 2) Adjust the chromatic aberration become center of purple and green.

Note) After adjustment Red, Green & Blue lens, remove lens cover and receive Cross-Hatch pattern and check the overall focus. If need, repeat above.

## o Convergence Adjustment

### 1. Preliminary steps

- 1) This adjustment should be performed after raster slant, raster position, horizontal and vertical adjustment.
- 2) This adjustment should be performed after warming up 60 minutes.
- 3) Do it always with crosshatch pattern.
- 4) Adjust for both PAL and NTSC system.
- 5) Use the jig screen with the cross hatch pattern for each mode.

### 2. Convergence Key

- 1) Convergence Mode : SVC,
- 2) Cursor shift : F, G, D, E
- 3) Cursor Movement/Adjustment Selection : OK
- 4) Cursor Color Selection : TV/AV
- 5) Adjustment mode out :

Note) When cursor flickers, its adjustment mode, and when quiescent, its cursor movement mode.

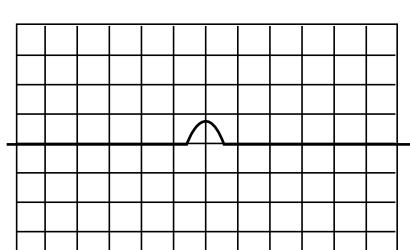

## o Mode Adjustment

### 1. Preliminary steps

Press the buttons SVC & of Remote Controller for adjustment to get into the convergence adjustment mode.

### 2. Horizontal/Vertical phase Adjustment

- 1) Press the buttons 9 & 5 to get into the phase adjustment mode.
- 2) Horizontal Phase Adjustment.  
Press the volume F / G button and move the convex part to the middle of TV screen.

- 3) Vertical Phase Adjustment

Press the channel D / E button and move the convex part to the middle of TV screen.

- 4) Press the OK button to escape from the adjustment.

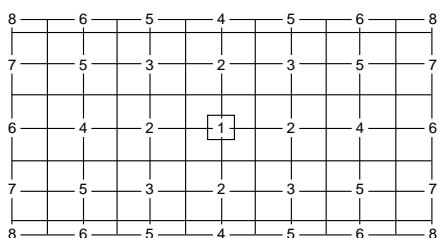

### 3. Pattern Position Adjustment

- 1) Change into pattern shift mode.  
(Press numeric buttons "9" & "4")
- 2) Make sure to overlap pattern and image.  
(Use MUTE button)
- 3) Accord the center of image and pattern.  
(Use F, G, D, E buttons)
- 4) Quit pattern shift mode. (Press "OK" button)
- 5) Save adjusted phase/pattern position adjustment mode.(Press "9", "2" & "OK" buttons)

### 4. Green Convergence Adjustment

- 1) Show the OSD on screen by pressing 2 button,then change the OSD to green(G) adjustment mode with pressing TV/AV button.
- 2) Close the cover of red CRT and blue CRT so that green display on screen only.
- 3) Adjust to coincide green pattern with screen jig pattern.  
(Use F, G, D, E buttons)

Move cursor and adjust convergence in same way with item 3).  
Here, do it in the same order from center listed in figure.

### 5. Red Convergence adjustment

- 1) Show the OSD on screen by pressing 2 button,then change the OSD to red(R) adjustment mode with pressing TV/AV button.
- 2) If the need arises,close the cover of the blue lens.
- 3) Coincide the red screen with the green screen in same way with that of green convergence adjustment.

### 6. Blue Convergence adjustment

- 1) Show the OSD on screen by pressing 2 button,then change the OSD to blue(B) adjustment mode with pressing TV/AV button.
- 2) Coincide the blue screen with the green screen in same way with that of red convergence adjustment.

### 7. Adjusted Data saving

- 1) Save the data after adjustment.  
(Press "9", "1" & "OK" button)
- 2) Quit convergence adjustment mode. ("M" button)

### o White Balance Adjustment

#### 1. Test Equipment

Brightness meter(CA110),Pattern Generator(Window Pattern)

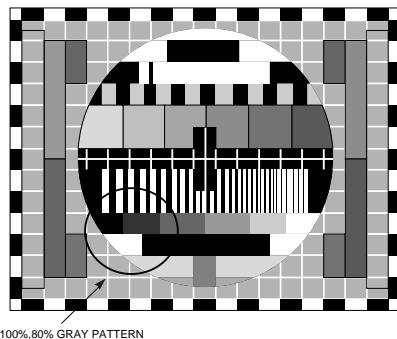

#### 2. Adjustment

- 1) This adjustment must be operated in a dark room or equivalent.
- 2) Adjust after Cut-Off and Focus adjustment.
- 3) The brightness meter must be located in 20±5cm distance from the center of the screen.
- 4) Receive WINDOW signal.
- 5) Set BRIGHT to H/Light adjustment mode in 4) and enter SVC mode by pressing the "SVC" button. Adjust RG (R Gain) and BG (B Gain) until color coordinate becomes

X=0.280 and Y=0.300 (Deviation : ±0.01).

- 6) Set BRIGHT to L/Light adjustment mode and adjust CR (R Cut Off) and CB (B Cut Off) until color coordinate becomes X=0.282 and Y=0.286 (Deviation : ±0.01).
- 7) Repeat adjusting until the color coordinate of H/Light and L/Light is satisfied.
- 8) Save the data after adjustment.  
(Press "OK" button)
- 9) Quit adjustment mode. ("TV/AV" button)

### o SUB-BRIGHT Adjustment

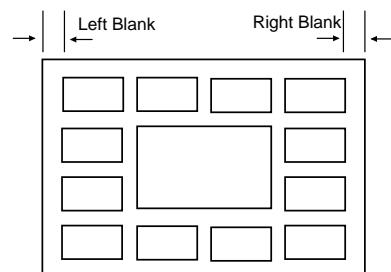

- 1) Tune the TV set to receive a EU 05 CH.
- 2) Enter SVC mode by pressing the "SVC" button. Adjust S-BRI data until 100% and 80% GRAY PATTERN is classified.  
(Use F, G, D, E, ENTER buttons)

### o DVCO Adjustment

- 1) Tune the TV set to receive a EU 05 CH.
- 2) Enter the adjustment mode by pressing SVC button of Remote Controller for adjustment,then select DVCO menu. Operate auto adjustment with VOLG button.  
If DVCO data is changed,auto adjustment has finished.
- 3) After finishing DVCO adjustment,save the data by pressing OK button.

### o PIP POSITION Adjustment

- 1) After receiving a PAL signal,show the multi-picture scan screen on screen with pressing WD2 9/4PIP button.
- 2) Check the left,right blank on SCAN screen.(May be 20±5mm)

- 3) If the left,right blank isn't 20±5mm and symmetry,enter the adjustment mode by pressing SVC button of Remote Controller for adjustment and select service adjustment mode 5 by pressing YELLOW button.
- 4) Adjust M-HOR and M-VER to symmetry of left,right blank in service adjustment mode 5.
- 5) When finishing adjustment,save the data by pressing OK button.

- **SVC Adjustment mode & Initial data**

### 1. White Balance adjustment data (IC:CXA2100)

Menu	Description	Range	Default
RD	Red Drive		12
GD	Green Drive		1F
BD	Blue Drive		19

## EXPLODED VIEW(PE-53A82T)

# EXPLODED VIEW PARTS LIST

The components identified by mark  $\triangle$  are critical for safety.  
Replace only with part number specified.

No.	Part No.	Description
105	3680V00007A	LENS,SEKINOS SSM-75(50)
107	4810V00395F	BRACKET,BLUE LENS+COUPLER+CPT S/S
108	4810V00395E	BRACKET,GREEN LENS+COUPLER+CPT S/S
109	4810V00395D	BRACKET,RED LENS+COUPLER+CPT S/S
120	120-D38E	SPEAKER,MID-RANGE 8 OHM 15/25W 87DB 12
121	6401VD0006G	SPEAKER,FULLRANGE (L)WOOFER+TWEETER
122	6401VD0006H	SPEAKER,FULLRANGE (R)WOOFER+TWEETER
124	4778V00025A	LEG,SPEAKER BOX
125	4778V00028A	LEG,SPEAKER BOX
