PLASMA TV SERVICE MANUAL

CHASSIS : RF-043B

MODEL : RT-42PX12X/XH

CAUTION

BEFORE SERVICING THE CHASSIS,
READ THE SAFETY PRECAUTIONS IN THIS MANUAL.

SAFETY PRECAUTIONS

IMPORTANT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special safety-related characteristics. These parts are identified by Δ in the Schematic Diagram and Replacement Parts List.
It is essential that these special safety parts should be replaced with the same components as recommended in this manual to prevent X-RADIATION, Shock, Fire, or other Hazards.
Do not modify the original design without permission of manufacturer.

General Guidance

An **isolation Transformer** should always be used during the servicing of a receiver whose chassis is not isolated from the AC power line. Use a transformer of adequate power rating as this protects the technician from accidents resulting in personal injury from electrical shocks.

It will also protect the receiver and its components from being damaged by accidental shorts of the circuitry that may be inadvertently introduced during the service operation.

If any fuse (or Fusible Resistor) in this monitor is blown, replace it with the specified.

When replacing a high wattage resistor (Oxide Metal Film Resistor, over 1W), keep the resistor 10mm away from PCB.

Keep wires away from high voltage or high temperature parts.

Due to high vacuum and large surface area of picture tube, extreme care should be used in **handling the Picture Tube**. Do not lift the Picture tube by its Neck.

Leakage Current Cold Check(Antenna Cold Check)

With the instrument AC plug removed from AC source, connect an electrical jumper across the two AC plug prongs. Place the AC switch in the on position, connect one lead of ohm-meter to the AC plug prongs tied together and touch other ohm-meter lead in turn to each exposed metallic parts such as antenna terminals, phone jacks, etc.

If the exposed metallic part has a return path to the chassis, the measured resistance should be between $1M\Omega$ and $5.2M\Omega$.

When the exposed metal has no return path to the chassis the reading must be infinite.

An other abnormality exists that must be corrected before the receiver is returned to the customer.

Leakage Current Hot Check (See below Figure)

Plug the AC cord directly into the AC outlet.

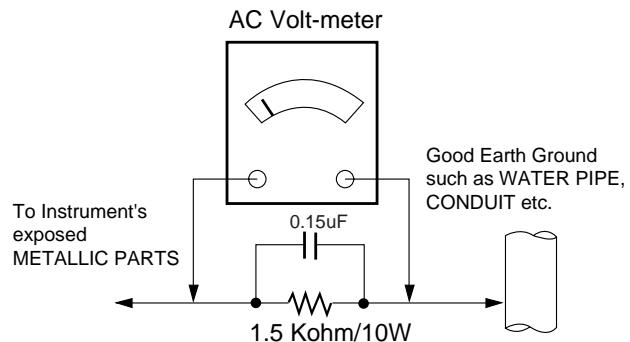

Do not use a line Isolation Transformer during this check. Connect 1.5K/10watt resistor in parallel with a 0.15uF capacitor between a known good earth ground (Water Pipe, Conduit, etc.) and the exposed metallic parts.

Measure the AC voltage across the resistor using AC voltmeter with 1000 ohms/volt or more sensitivity.

Reverse plug the AC cord into the AC outlet and repeat AC voltage measurements for each exposed metallic part. Any voltage measured must not exceed 0.75 volt RMS which is corresponds to 0.5mA.

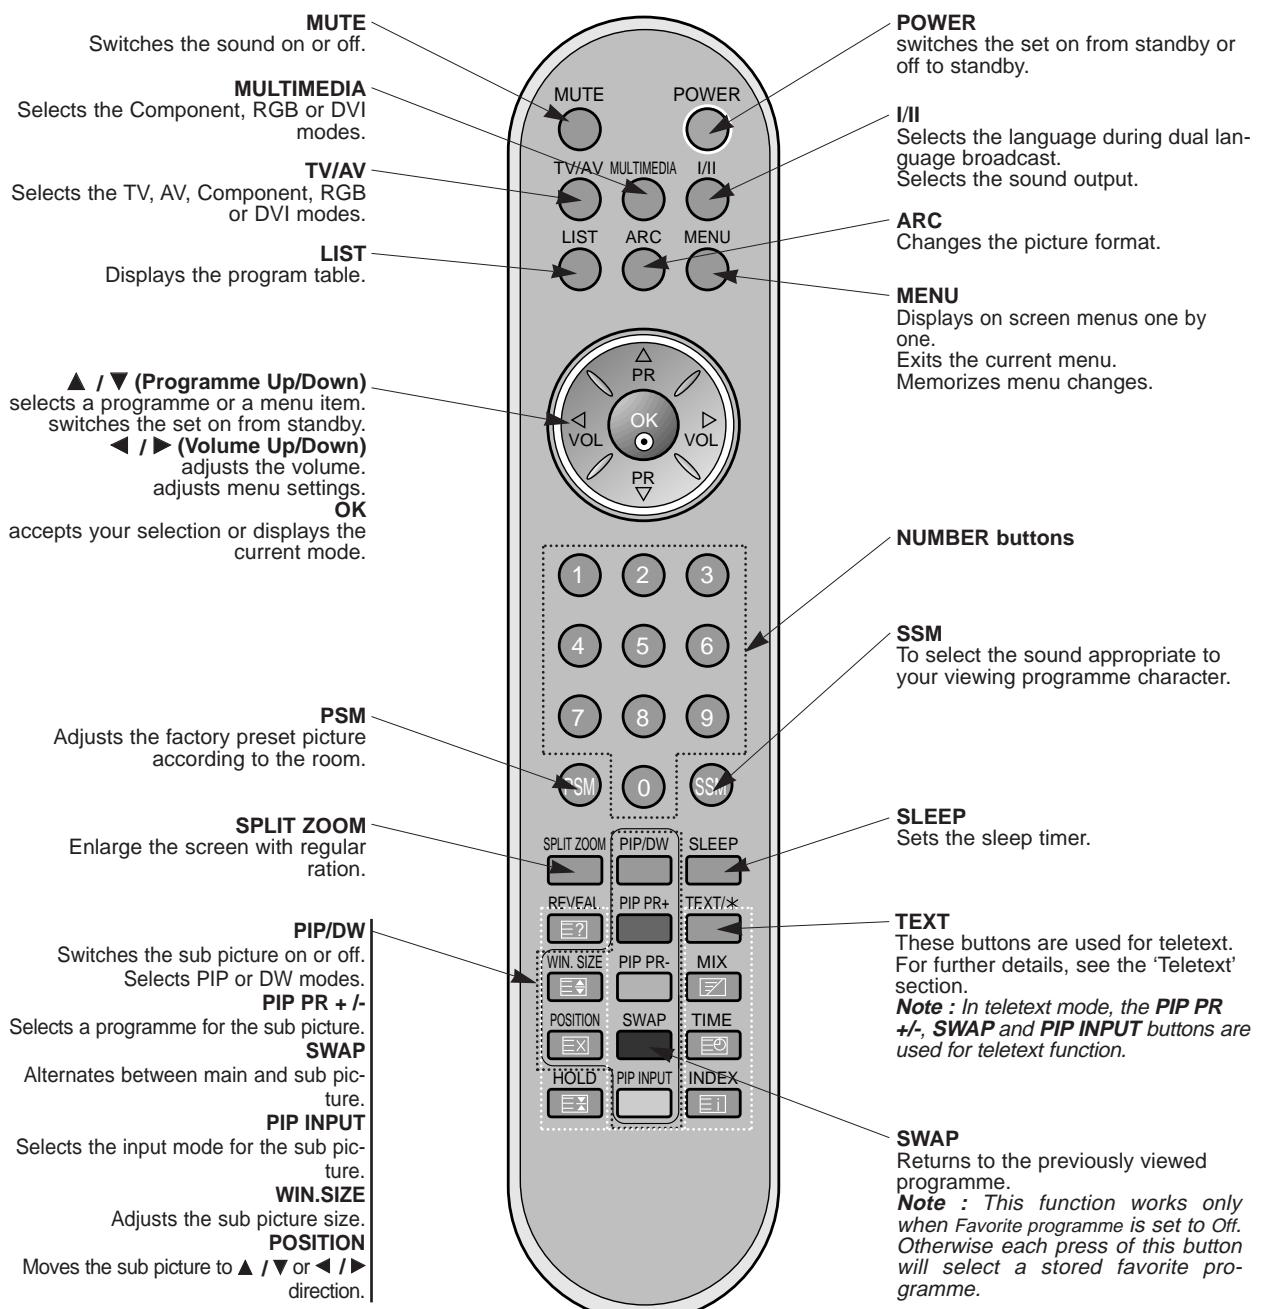

In case any measurement is out of the limits specified, there is possibility of shock hazard and the set must be checked and repaired before it is returned to the customer.

Leakage Current Hot Check circuit

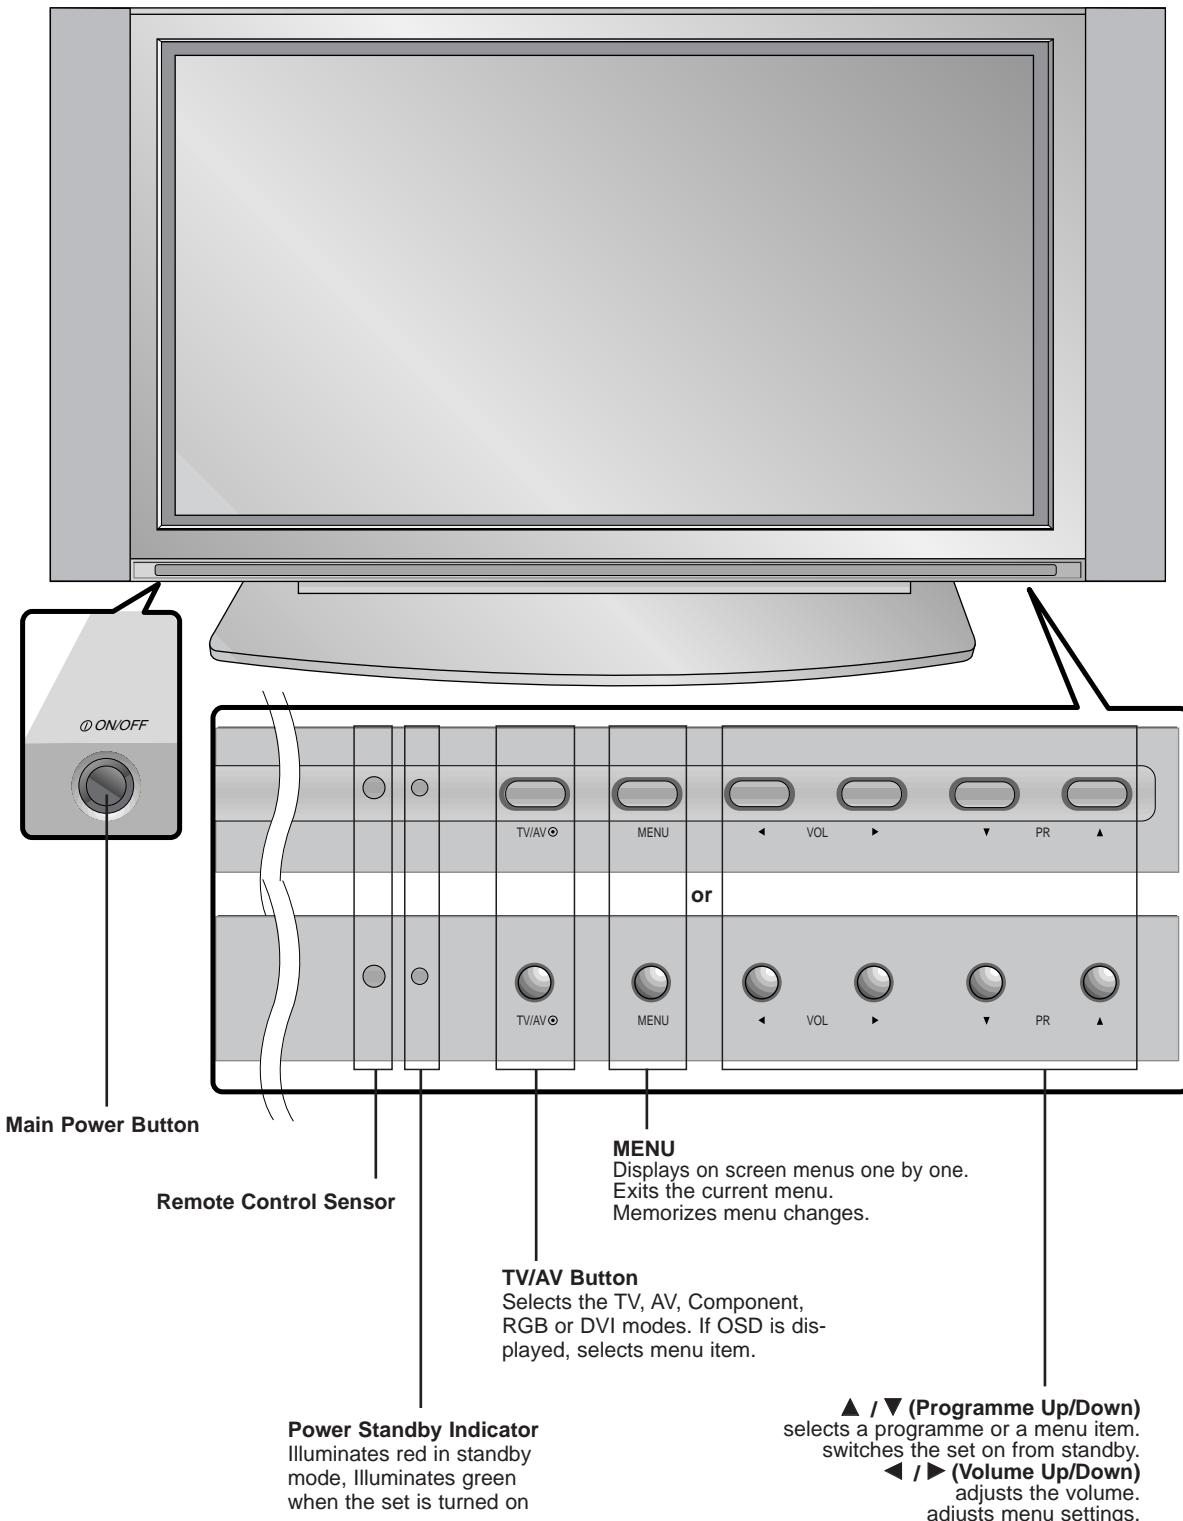

DESCRIPTION OF CONTROLS

- When using the remote control aim it at the remote control sensor of the set.
- There's maybe a defect in consecutive operation of remote control in specified brightness according to this set feature.

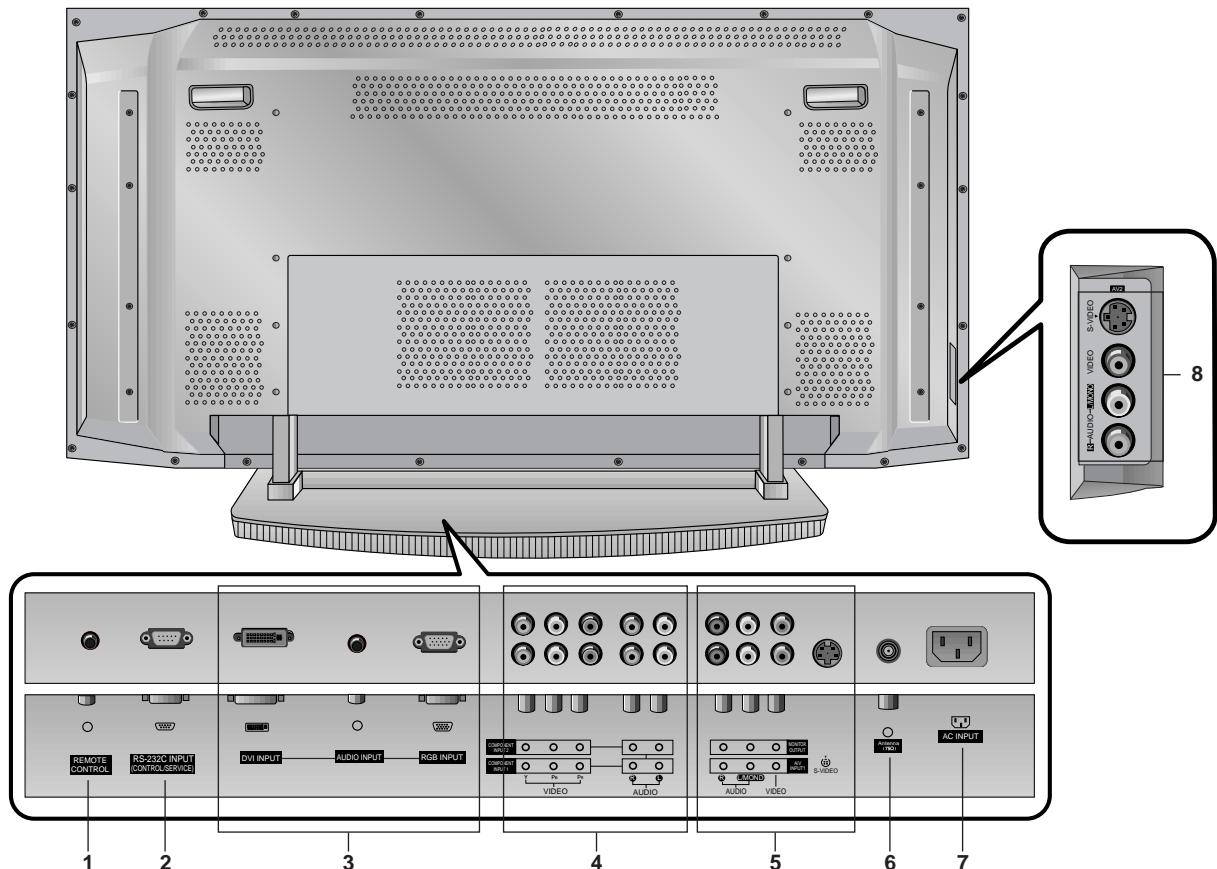

- Shown is a simplified representation of the set.
- Here shown may be somewhat different from your set.

<Front Panel Controls>

<Back Panel>

1. CONTROL LOCK / REMOTE CONTROL

2. RS-232C INPUT(CONTROL/SERVICE) PORT

Connect to the RS-232C port on a PC.

3. DVI INPUT / AUDIO INPUT / RGB INPUT

Connect the monitor output socket of the PERSONAL COMPUTER to this socket.

4. COMPONENT INPUT

Connect DVD video outputs to Y, P_B, P_R of COMPONENT INPUT and audio outputs to Audio sockets of AUDIO INPUT.

5. AUDIO/VIDEO IN SOCKETS (AV1)

Connect the audio/video out sockets of external equipment to these sockets.

S-VIDEO/AUDIO IN SOCKETS

Connect the S-VIDEO out socket of an VCR to the **S-VIDEO** socket.

Connect the audio out sockets of the VCR to the audio sockets as in **AV1**.

6. ANTENNA INPUT

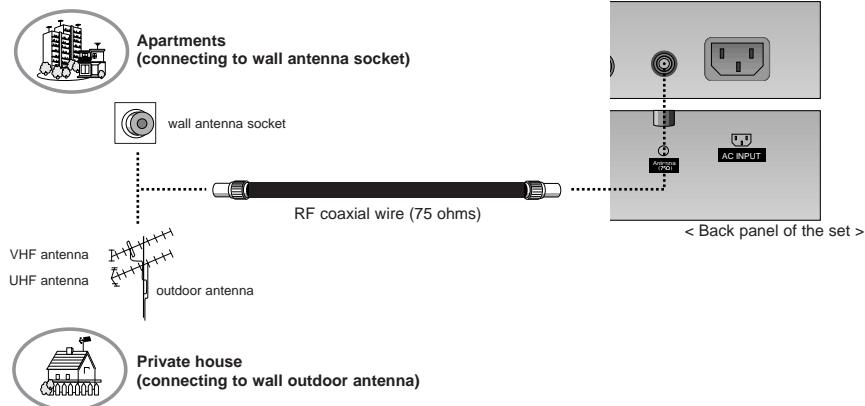

7. POWER CORD SOCKET

This Monitor operates on an AC power. The voltage is indicated on the Specifications page. Never attempt to operate the Monitor on DC power.

8. AUDIO/VIDEO IN SOCKETS (AV2)
S-VIDEO/AUDIO IN SOCKETS

Antenna Connection

- Be careful for the bronze wire not to be bended in connecting to antenna input port.

Watching VCR

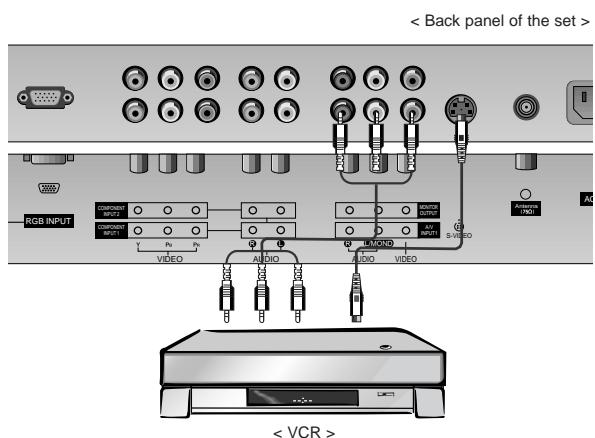

- When connecting the Monitor to external equipment, match the colours of connecting ports (Video - yellow, Audio (L) - white, Audio (R) - red).
- Connect the VIDEO INPUT socket (yellow) to the VIDEO INPUT on the set.
- If you have a mono VCR, connect the audio cable from the VCR to the AUDIO (L/MONO) input on the set.
- If you connect an S-VIDEO VCR to the S-VIDEO input, the picture quality is improved; compared to connecting a regular VCR to the Video input.
- Use the orbiter function to Avoid having a fixed image remain on the screen for a long period of time. Typically a frozen still picture from a VCR. (Refer to p. 25)
- If a 4:3 picture format is used; the fixed image may remain visible on the screen.
- To avoid picture noise (interference), leave an adequate distance between the VCR and set.

Watching TV programmes

- Turn the set on and select the programme you want.

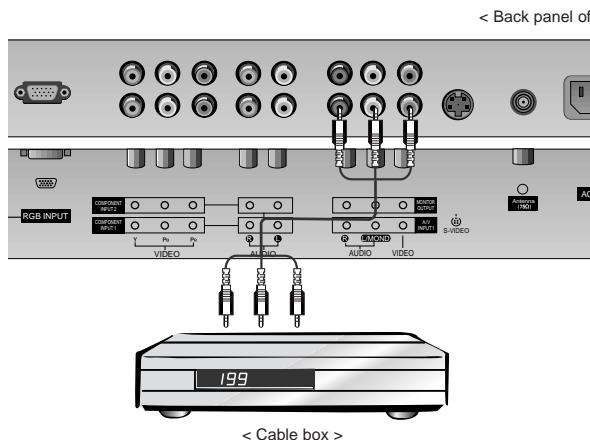

Watching VCR

1. Use the **TV/AV** button on the remote control to select AV1 or AV2.
- If both S-VIDEO and VIDEO sockets have been connected to the S-VHS VCR simultaneously, only the S-VIDEO can be received.
2. Insert a video tape into the VCR and press the **PLAY** button on the VCR.
(See VCR owner's manual)

Watching Cable TV

- After subscribing for a local cable TV station and installing a converter you can watch cable TV.
- For further information of cable TV, contact the local cable TV station.

To watch cable TV

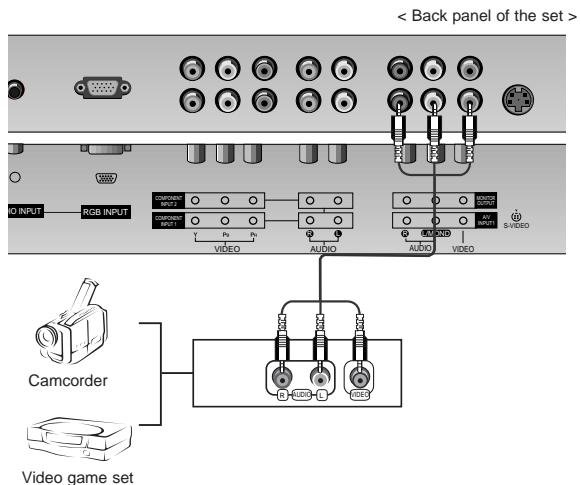

1. Use the **TV/AV** button on the remote control to select AV1 or AV2.
2. Tune to cable service provided channels using the cable box.

Watching external AV source

- When connecting the set to an external source, match the colours of AUDIO/VIDEO input jacks on the set with the output jacks on the audio/video equipment: Video = yellow, Audio (Left) = white, Audio (Right) = red.

How to use

1. Use the **TV/AV** button on the remote control to select AV1 or AV2.
2. Operate the corresponding external equipment. See external equipment operating guide.

Watching DVD

How to connect

Connect DVD video outputs to Y, Pb, Pr of COMPONENT INPUT and audio outputs to Audio sockets of AUDIO INPUT.

How to use

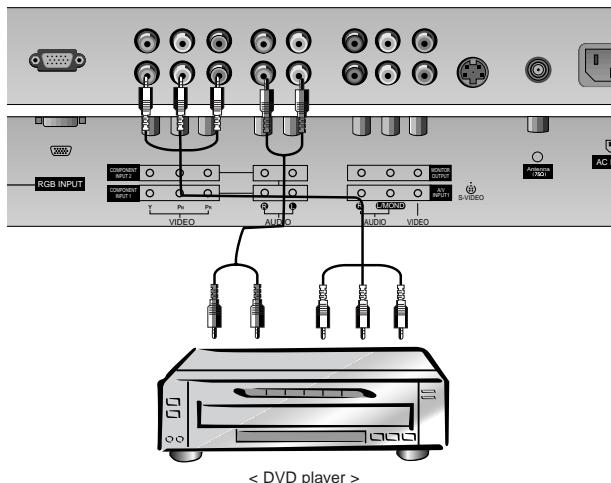

1. Turn on the DVD player, and insert a DVD.
2. Use **TV/AV** or **MULTIMEDIA** button on the remote control to select Component 1 or Component 2. Refer to the DVD player's manual for operating instructions.

- **Component Input ports**

You can get better picture quality if you connect DVD player with component input ports as below.

Component ports of the set	Y	Pb	Pr
Video output ports of DVD player	Y Y Y	Pb B-Y Cb Pb	Pr R-Y Cr Pr

< Back panel of the set >

< DVD player >

Watching DTV (option)

- To watch digitally broadcast programs, purchase and connect a digital set-top box.

How to connect

1. Use the monitor's COMPONENT (Y, Pb, Pr) INPUT, RGB or DVI jack for video connections, depending on your set-top box connector. Then, make the corresponding audio connections.

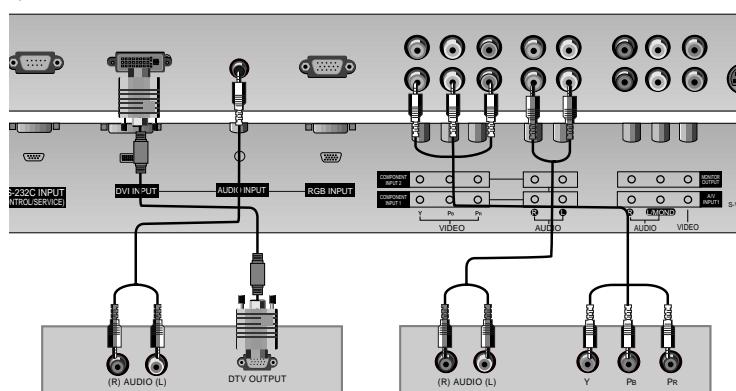

How to use

1. Turn on the digital set-top box. (Refer to the owner's manual for the digital set-top box.)
2. Use **TV/AV** or **MULTIMEDIA** on the remote control to select Component 1, Component 2 or RGB.

- **DTV Input signal**

Mode	Terminal	Component	RGB (DTV)
576p(50Hz)	o	o	o
1080i(50Hz)	o	o	o
1152i(50Hz)	o	o	o

< Back panel of the set >

< Digital Set-top box >

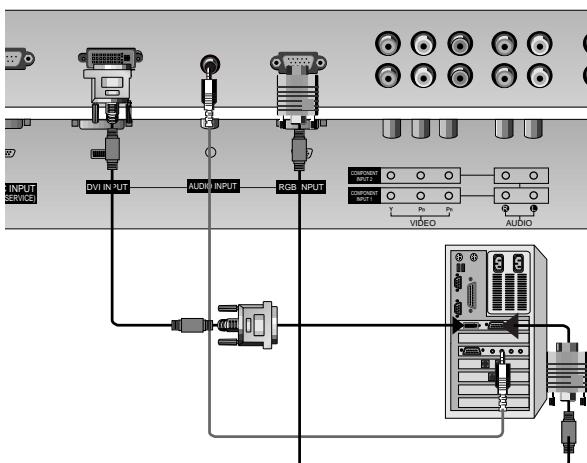

Connecting PC

- To enjoy vivid picture and sound, connect a PC to the set.
- Avoid keeping a fixed image on the set's screen for a long period of time. The fixed image may become permanently imprinted on the screen; use a screen saver when possible.
- Connect PC to the RGB INPUT(PC INPUT) or DVI INPUT(DIGITAL RGB INPUT) port of the set; change the resolution output of PC accordingly.
- There might be a noise according to some resolution, vertical pattern, contrast or brightness in PC mode. Then change the PC mode into other resolution or change the refresh rate into other rate or adjust the brightness and contrast on the menu until the picture is clean. If the refresh rate of the PC graphic card can not be changed, change the PC graphic card or consult it to the manufacturer of the PC graphic card.
- The synchronization input form for Horizontal and Vertical frequencies is separate.

Setup Instructions to Connect a PC to your set

- We recommend using 640x480, 60Hz for the PC mode, they provide the best picture quality.
- If the resolution of PC is over UXGA, there will be no picture on the set.
- Connect the signal cable from the set output port of the PC to the RGB INPUT port of the set or the signal cable from the DVI output port of the PC to the DVI INPUT port on the set.
- Connect the audio cable from the PC to the Audio input on the set. (Audio cables are not included with the set).
- If using a sound card, adjust PC sound as required.
- This set apply a VESA Plug and Play Solution. The set provides EDID data to the PC system with a DDC protocol. The PC adjusts automatically to use this set.
- DDC protocol is preset for RGB (Analog RGB), DVI (Digital RGB) mode.
- If required, adjust the set settings for Plug and Play functionally.
- If graphic card on the PC does not output analog and digital RGB simultaneously, connect only one of both RGB INPUT or DVI INPUT to display the PC on the set.
If graphic card on the PC does output analog and digital RGB simultaneously, set the set to either RGB or DVI; (the other mode is set to Plug and Play automatically by the set.)
- DOS mode may not work depending on video card if using a DVI-I cable.

< Back panel of the set >

PC Setup

1. Turn on the PC and apply power to the set.
2. Turn on the display by pressing the **POWER** button on the set's remote control.
3. Use the **TV/AV** or **MULTIMEDIA** button on the remote control to select the RGB or DVI input source.
4. Set the resolution output of the PC to SXGA or under (1280 x 1024, 60Hz). (Refer to p. 13)

Displayable Monitor Specification

RGB / DVI mode

Resolution	Horizontal Frequency(KHz)	Vertical Frequency(Hz)
640x350	31.468	70.09

RT-50PX10/20 series

Accessories

Owner's Manual

Alkaline batteries

Remote Control handset

2-TV bracket bolts

D-sub 15 pin cable (Optional)

Power Cord

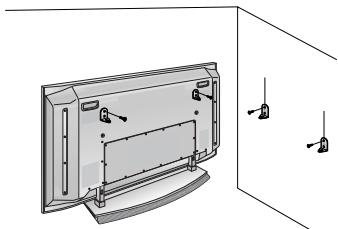

DVI Cable (Optional)

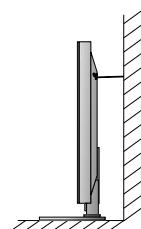

2-TV brackets
2-Wall brackets

Joinning the TV assembly to the wall to protect the set tumbling

- Secure the TV assembly by joining it to a wall by using the TV/Wall brackets.

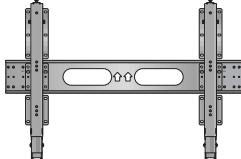

- After the set must be mounted on a desk top, install the TV brackets on the TV as shown.
Insert the 2 bolts and tighten securely, in the upper holes on the bracket.
Install the wall brackets on the wall with 4 bolts*, (not supplied with the product), as shown.
Match the height of the TV brackets and the wall brackets.
Check to be sure the brackets are tightened securely.

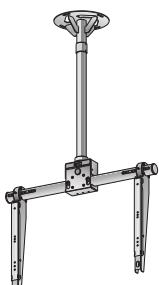

- Secure the TV assembly to the wall with strong strings or wound wire cables, (not supplied with the product), as shown.

Optional Extras

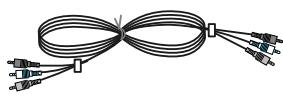

- Optional extras can be changed or modified for quality improvement without any notification new optional extras can be added.
- Contract your dealer for buying these items.

Tilt wall mounting bracket

Ceiling mounting bracket

Video cables

Audio cables

SPECIFICATIONS

MODEL	RT-42PX10/11/H RT-42PX20/21/H	RT-42PX12X/H
Width (inches / mm)	48.4 / 1210	
Height (inches / mm)	27.6 / 701	
Depth (inches / mm)	3.8 / 96	
Weight (pounds / kg)	66 / 29.9	
Power requirement	AC100-240V, 50/60Hz	
Resolution	852 x 480 (Dot)	1024 x 768 (Dot)
Colour	16,770,000 (256 steps of each R, G and B)	
Operating Temperature Range	32 ~ 104°F (0 ~ 40°C)	
Operating Humidity Range	Less than 80%	

MODEL	RT-50PX10/11/H	RT-50PX20/21/H
Width (inches / mm)	55.1 / 1400	
Height (inches / mm)	32.3 / 821	
Depth (inches / mm)	3.9 / 99	
Weight (pounds / kg)	115 / 52.15	
Power requirement	AC100-240V, 50/60Hz	
Resolution	1366 x 768 (Dot)	
Colour	16,770,000 (256 steps of each R, G and B)	
Operating Temperature Range	32 ~ 104°F (0 ~ 40°C)	
Operating Humidity Range	Less than 80%	

- The specifications shown above may be changed without notice for quality improvement.

ADJUSTMENT INSTRUCTIONS

1. Application Object

These instructions apply to the RF-043B Chassis.

2. Specification

- (1) Because this is not a hot chassis, it is not necessary to use an isolation transformer. However, the use of isolation transformer will help protect test instrument.
 - (2) Adjustment must be done in the correct order.
 - (3) The adjustment must be performed in the circumstance of $25\pm5^{\circ}\text{C}$ of temperature and $65\pm10\%$ of relative humidity if there is no specific designation.
 - (4) The input voltage of the receiver must keep 100-220V, 50/60Hz.
 - (5) The receiver must be operated for about 15 minutes prior to the adjustment.
-
- After RGB Full white HEAT-RUN Mode, the receiver must be operated prior to adjustment.
 - Enter into HEAT-RUN MODE
 - 1) Press the POWER ON KEY on R/C for adjustment.
 - 2) OSD display and screen display 100% full WHITE PATTERN.
-
- * Set is activated HEAT-RUN without signal generator in this mode.
 - * Single color pattern(RED/BLUE/GREEN) of HEAT-RUN mode uses to check PANEL.

Caution) If you turn on a still screen more than 20 minutes (Especially digital pattern, cross hatch pattern), a after image may be occur in the black level part of the screen.

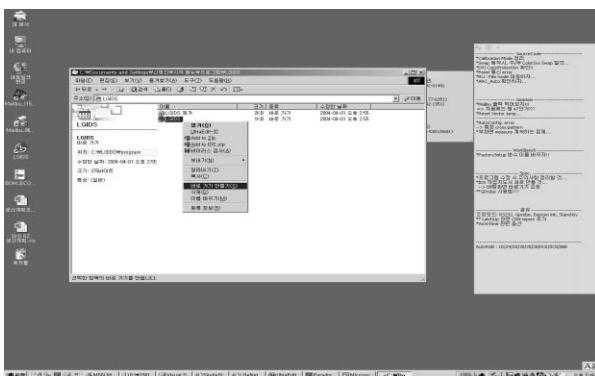

3. Channel memory

3-1. Setting up the LGIDS

- (1) Install the LGIDS. (idsinst.exe)

After installation is completed, check if the file shown on (Fig. 1) has been created.

After using the right mouse button to click on 'LGIDS',

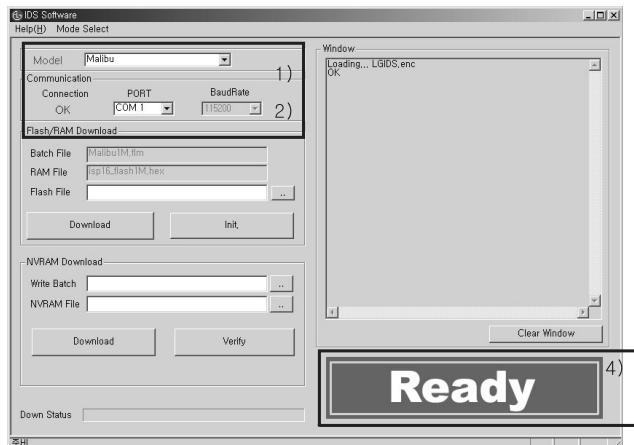

(Fig. 1)

- (2) select 'Create Shortcut' from the menu with the left mouse button and move the shortcut icon onto the desktop.
- (3) Double-click on the 'LGIDS' icon on the desktop to execute the program.

3-2. Channel memory Method

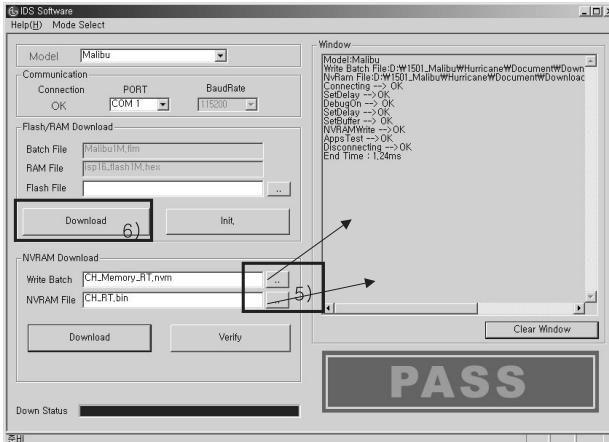

- (1) Check if 'Malibu' has been selected on 'Model'.
- (2) Check if 'Connection' under 'Communication' is 'OK'.
- (3) If it is 'NG', look on 'PORT'(COM1,2,3...) and make sure that it's on the right port.
- (4) After connecting RS-232C cable, turn on the power.
If it the communication has been done correctly, 'READY' is displayed at the lower right corner of the window shown as (Fig. 2).

* When the TV SET is not assembled completely and only the PCB is supplied by Stand-by 5V, download at the Stand-by state (LED is Red).

(Fig. 2)

- (5) Select proper CH_memory file(*.nvm) for each model at [NVRAM Download] —> [Write Batch]
Next, select proper binary file(*.bin) including the CH information for each model at [NVRAM File].
- (6) Click the [Download] button.
It means the completion of the CH memory download if all items show 'OK' and Status is changed by 'PASS' at the lower right corner of the window.
- (7) If you want to check whether the CH information is memorized correctly or not, click the [Verify] button.
And then compare NVRAM File(*.bin) with the CH information downloaded.

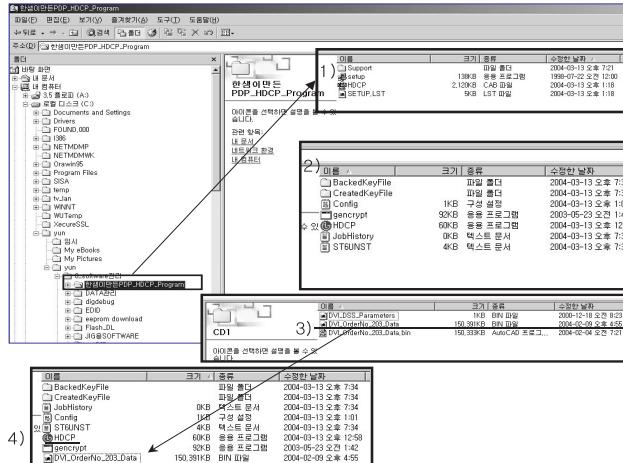

(Fig. 3)

4. HDCP Download

4-1. LGIDS Setting Method

- (1) Click on 'setup' to install in your directory.
- (2) After installation is completed, check if the file shown on (Fig. 4) has been created.
- (3) Copy the KEY from source CD into the HDCP directory which was installed just now.

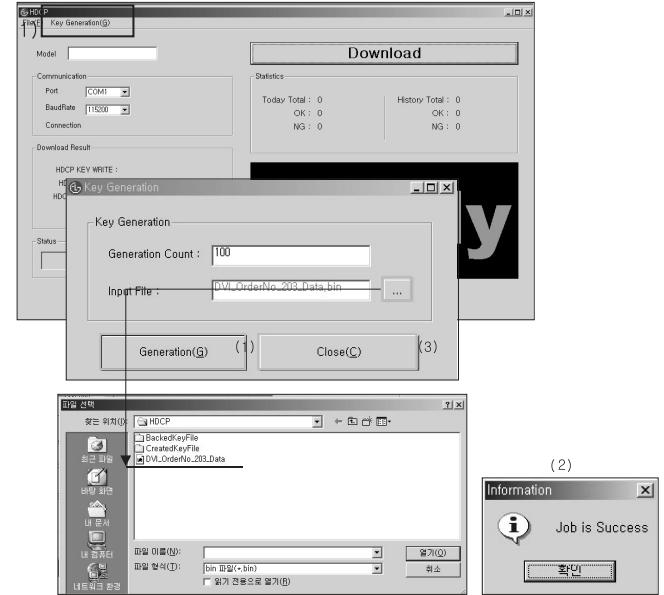

(DVI_orderNo_2003_data)

(Fig. 4)

- (4) After running HDCP(application program) which is inside the HDCP directory, setup the Communication.
Port : COM1(modification possible)
BaudRate : 115200

4-2. KEY Generation

(Fig. 5)

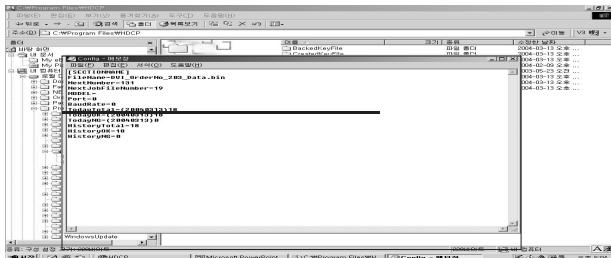

- (1) Click on 'Key Generation (G)'.
- (2) Input the number of the key in Generation count.
ex) If 100 Keys are required, then just register 100 and next time it will automatically get 101.
- (3) Input file : When installing the program for the first time, you must find the original KEY that you copied and open it. It is crucial that you copy the original KEY into this directory.
When you use Generation, the information is recorded in Config.ini.
- (4) Click on 'Generation' —————— (1)
If it is done correctly, you will see "Job is Success." —————— (2)
Click on 'close' —————— (3)
- (5) Check the Generation Data(Confirmation it's possible within HDCP\CreatedKeyFile)

(Fig. 6)

(6) It is possible to check how many Generations are created at this point.

(Fig. 7) shows that you have created 130 Generations and you will start from 131 next time.

(Fig. 7)

4-3. HDCP Download Method

(1) Input power of Stand-By 5V.

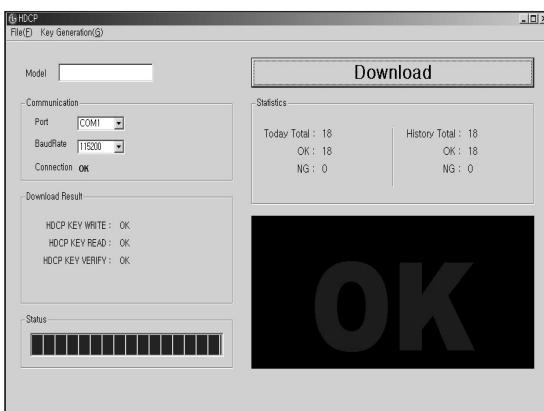

(Download must be executed only when it is on Stand-by)

(2) The RS-232C(9PIN) must be connected to the COM1 on the PC.

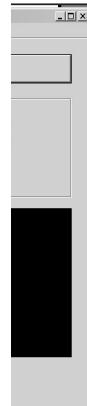

(Fig. 8)

(3) If all the preparation is completed, click on 'Download'.

(Fig. 9) Normal State

(Fig. 10) Abnormal State

(4) If abnormal state (Fig. 10) display then (3) execute.

Each PCB assembly must be checked by check JIG set.
(Because power PCB Assembly damages to PDP Module,
especially be careful)

5. POWER PCB Assy Voltage Adjustments (Va, Vs Voltage Adjustments)

5-1. Test Equipment : D.M.M. 1EA

5-2. Connection Diagram for Measuring Refer to (Fig 11).

5-3. Adjustment Method for P/No. 3501V00180A B/D

(1) Va Adjustment

- 1) After receiving 100% Full White Pattern, HEAT RUN.
- 2) Connect + terminal of D.M.M to Va pin of P805, connect - terminal to GND pin of P805.
- 3) After turning RV501, voltage of D.M.M adjustment as same as Va voltage which on label of panel right/top (Deviation; $\pm 0.5V$)

(2) Vs Adjustment

- 1) Connect + terminal of D.M.M to Vs pin of P805, connect - terminal to GND pin of P805.
- 2) After turning RV401, voltage of D.M.M adjustment as same as Vs voltage which on label of panel right/top. (Deviation; $\pm 0.5V$)

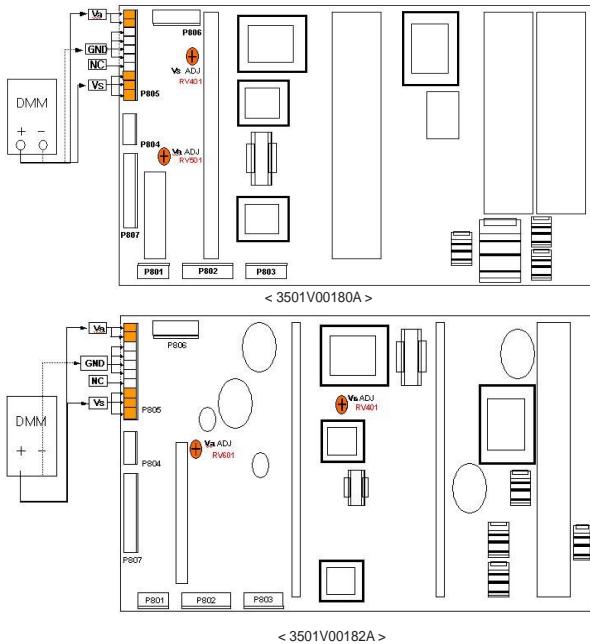

5-4. Adjustment Method for P/No. 3501V00182A B/D

(1) Va Adjustment

- 1) After receiving 100% Full White Pattern, HEAT RUN.
- 2) Connect + terminal of D.M.M to Va pin of P805, connect - terminal to GND pin of P805.
- 3) After turning RV601, voltage of D.M.M adjustment as same as Va voltage which on label of panel right/top. (Deviation; $\pm 0.5V$)

(2) Vs Adjustment

- 1) Connect + terminal of D.M.M to Vs pin of P805, connect - terminal to GND pin of P805.
- 2) After turning RV401, voltage of D.M.M adjustment as same as Vs voltage which on label of panel right/top. (Deviation; $\pm 0.5V$)

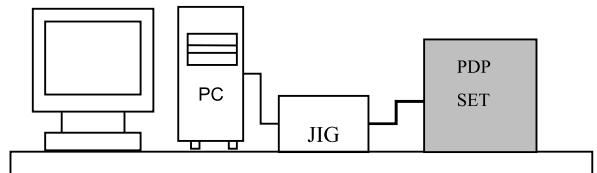

(Fig. 11) Connection Diagram of Power Adjustment for Measuring

6. DDC Data Input

6-1. Required Test Equipment

- (1) A jig for adjusting PC, DDC (PC serial to D-sub Connection equipment)
- (2) S/W for writing DDC (EDID Data Write & Read)
- (3) D-sub 15P Cable, D-Sub to DVI Connector (Connect to DVI Jack)

6-2. Setting of Device

6-3. Preparation for Adjustment

- (1) Set devices as above and turn the PC, jig on.
- (2) Put S/W for writing DDC (EDID data Write & Read) into operation. (operated in DOS mode.)

6-4. Sequence of Adjustment

(1) DDC Data Input for Analog-RGB

- 1) Put the set on the table and turn the power on.
- 2) Connect PC Serial to D-sub 15P Cable of jig for DDC adjustment to RGB terminal (D-Sub 15Pin).
- 3) Operate S/W for DDC record and select DDC data for Analog RGB in Model Menu.
- 4) Operate EDID Write command.
- 5) Operate EDID Read command and check whether Check Sum is 53.
- 6) If Check Sum is not 53, repeat 3) ~ 4).
- 7) If Check Sum is 53, DDC data for Analog-RGB input is completed.

(2) DDC Data input for Digital-RGB(DVI)

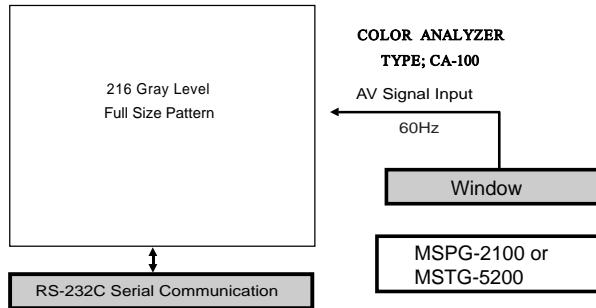

- 1) Connect PC Serial to DVI Cable of jig for DDC adjustment to DVI terminal (DVI Jack).
- 2) Operate S/W for DDC record and select DDC data for digital RGB in model menu.
- 3) Operate EDID Write command.
- 4) Operate EDID Read command and check whether Check sum is D2(1page), BF(2page).
- 5) If Check sum is not D2(1page), BF(2page), repeat 3) ~ 4).
- 6) If Check sum is D2(1page), BF(2page), DDC data for Analog-RGB input is completed.

7. Adjustment of White Balance

7-1. Required Equipment

Color Analyzer (CA-100 or same product)

7-2. Connection Diagram of Equipment for Measuring

(Fig. 12) White Balance Adjustment

7-3. Adjustment of White Balance

- Operate the Zero-calibration of the CA-100, then stick sensor to PDP module surface when you adjust.
- For manual adjustment, it is also possible by the following sequence.
 - Select white pattern of heat-run mode by pressing power on key on remote control for adjustment then operate heat run more than 15 minutes.
 - Supply Gray Pattern (216 Level Full Size Pattern: Signal level=0.59V±0.03V) signal to VIDEO input. (AV2 Input 60Hz) (Refer to Fig. 12)
 - Press the FRONT-AV KEY on R/C for converting input mode.
 - To adjust, stick sensor to 216 Gray Level Pattern, press ADJ key twice(White Balance) on remote control.
For adjustment and ▲, ▼ on remote control for adjustment mode to select Red Gain and Green Gain, press VOL +, - Key and adjust it until color coordination becomes as below.
* 216 Gray level=Signal level 0.59V±0.03V
X; 0.283±0.003, Y; 0.297±0.003
Color Temperature; 9,300°K±500°K
 - Exit adjustment mode using ■ Key.

8. Auto Component Color Balance

8-1. Required Test Equipment

Pattern Equipment: MSP3240A or same product
(16 Gray Scale Pattern output(Component output Level: 0.7Vp-p)

8-2. Method of Auto RGB Color Balance

- Input RGB Source : Component 480p/576p 16 Gray Scale Pattern
At this time, except Pb and Pr signal, only Y signal insert.
- Press ADJ KEY on R/C for adjustment.
- Press Vol. + KEY and operate To set.
- Auto-RGB OK means completed adjustment.

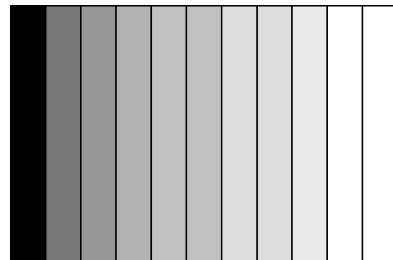

9. Auto RGB Color Balance

9-1. Required Test Equipment

Pattern Equipment: PC Pattern Generator (VG828, VG854, 801GF, MSP3240A)
(16 Gray Scale Pattern output(RGB output Level: 0.7Vp-p)

9-2. Method of Auto RGB Color Balance

- Input RGB Source : 16 Gray Scale Pattern output (RGB output Level : 0.7Vp-p)
- Press ADJ KEY on R/C for adjustment.
- Press Vol. + KEY and operate To SET.
- Auto-RGB OK means completed adjustment.

(Fig. 13) Auto RGB/ Component Color Balance Test Pattern

2. No Power

(1) Symptom

- Doesn't minute discharge at module.
- Non does not come in into the front LED.

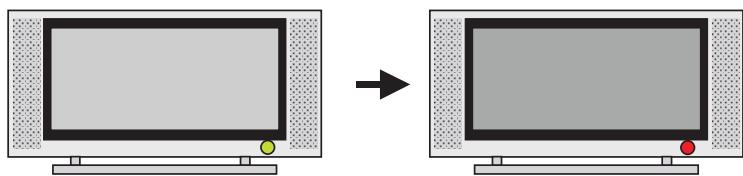

(2) Check follow

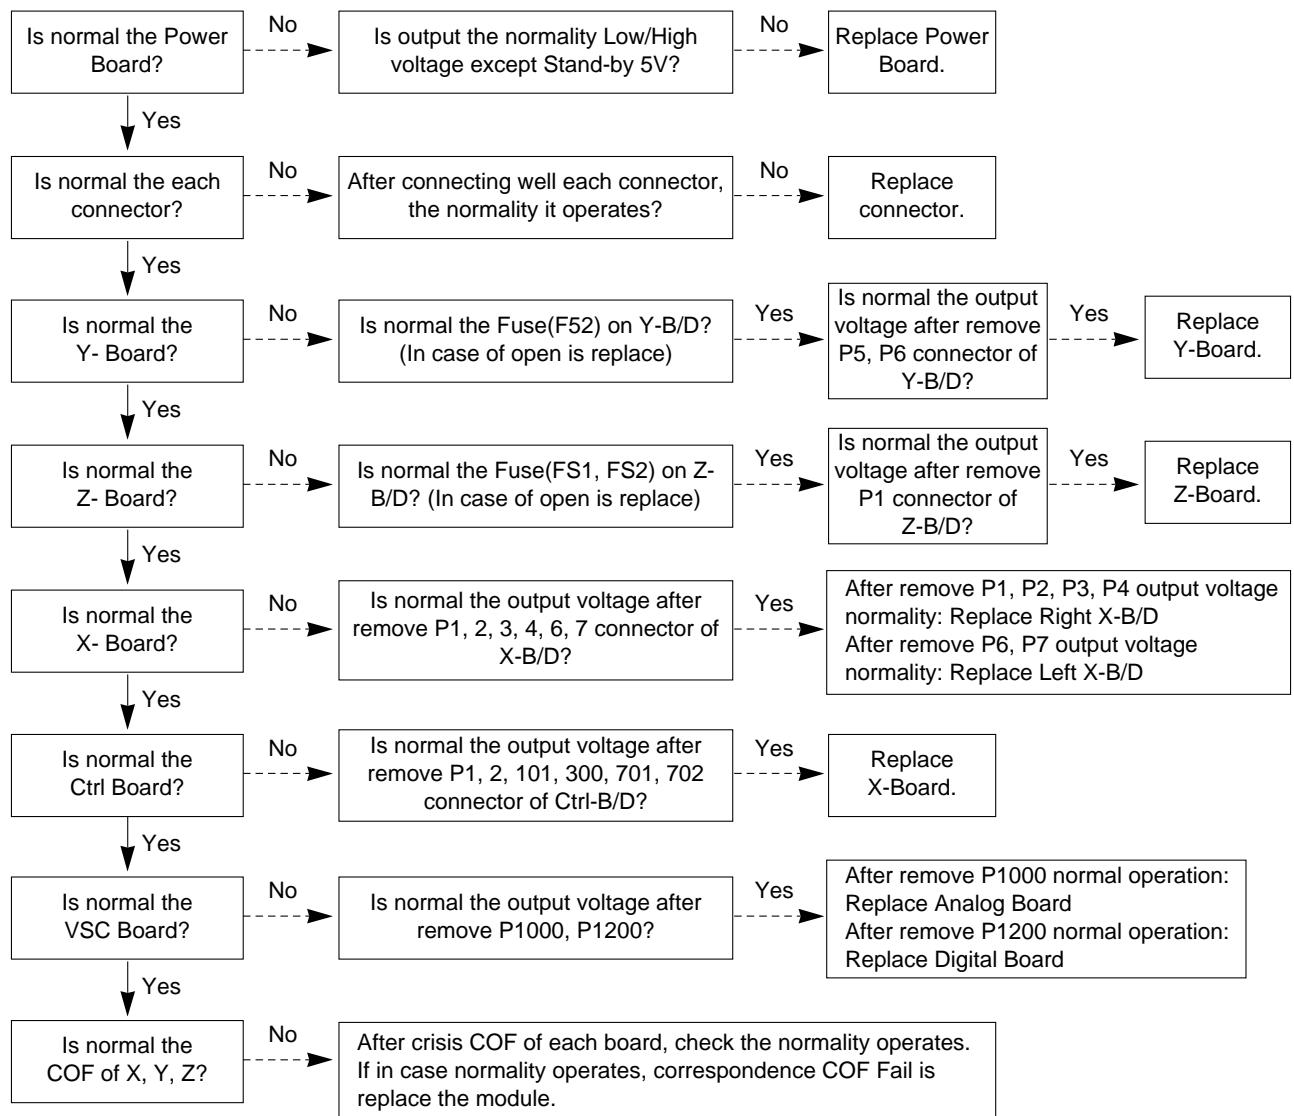

3. Protect Mode

(1) Symptom

- After once shining, it does not discharge minutely from module
- The Rely falls(The sound is audible "click")
- It is converted with the color where the front LED is red from green.

(2) Check follow

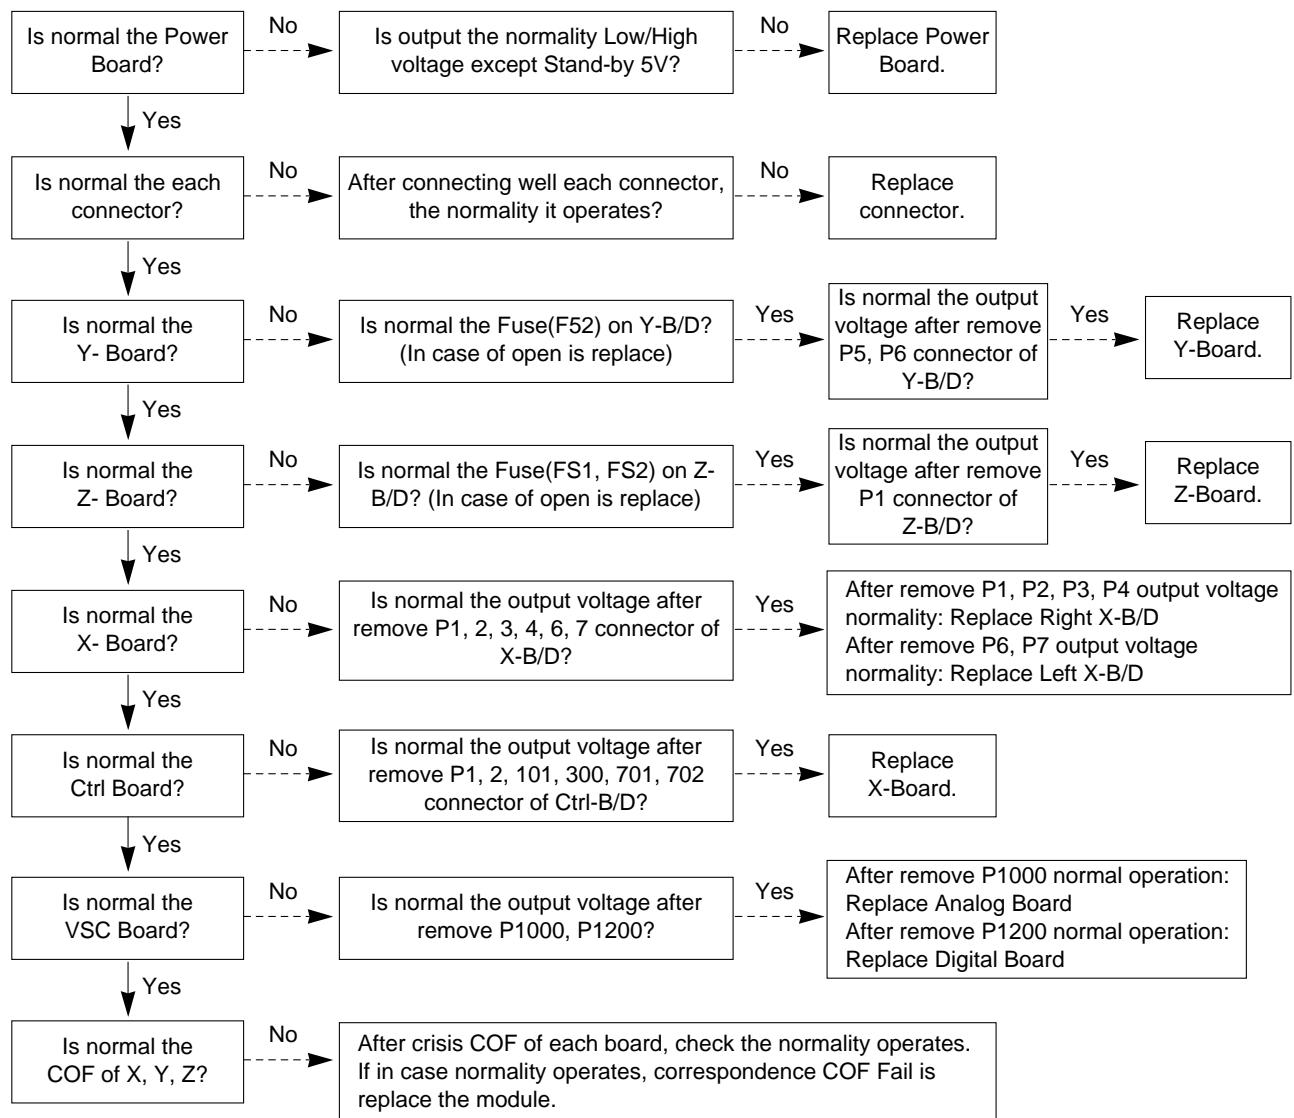

4. No Raster

(1) Symptom

- Doesn't minute discharge at module.
- It maintains the condition where the front LED is green.

(2) Check follow

5. In case of occur strange screen into specific mode

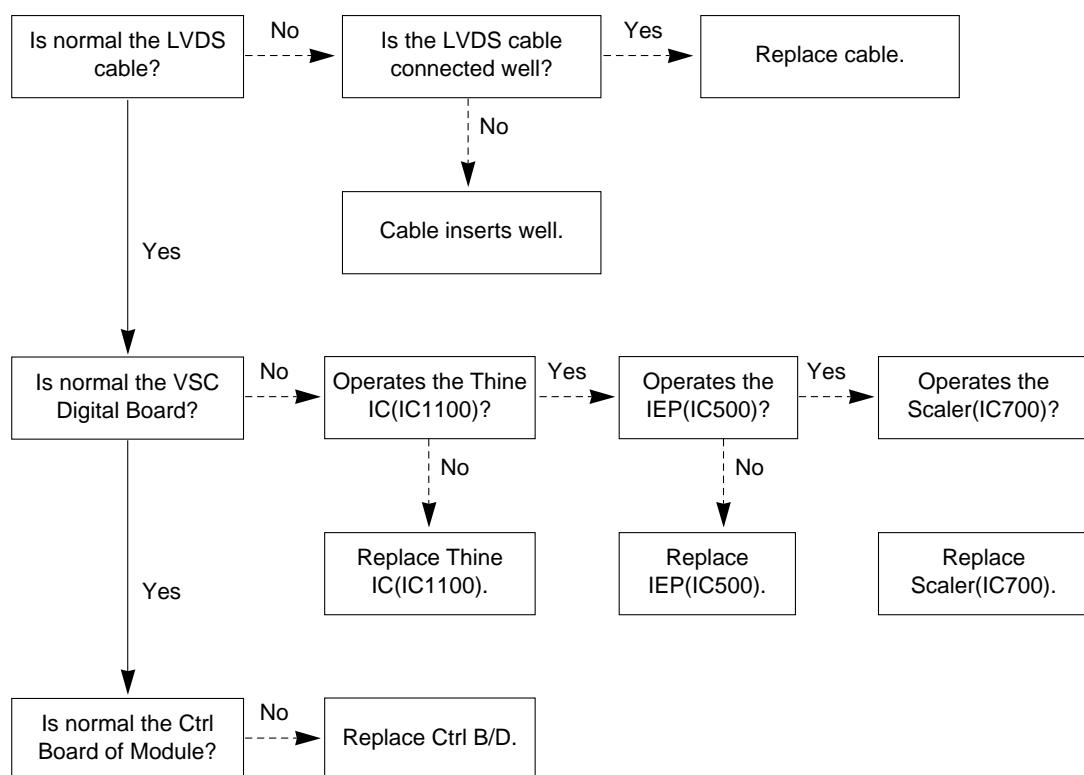

5-1. In case of does't display the OSD

(1) Symptom

- LED is green
- The minute discharge continuously becomes accomplished from module

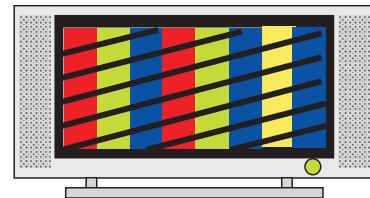

(2) Check follow

5-2. In case of does't display the screen into specific mode

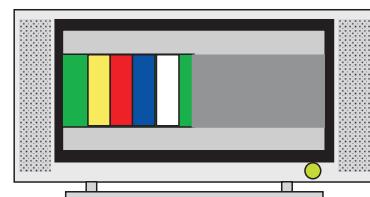

(1) Symptom

- The screen does not become the display from specific input mode (RF, AV, Component, RGB, DVI).

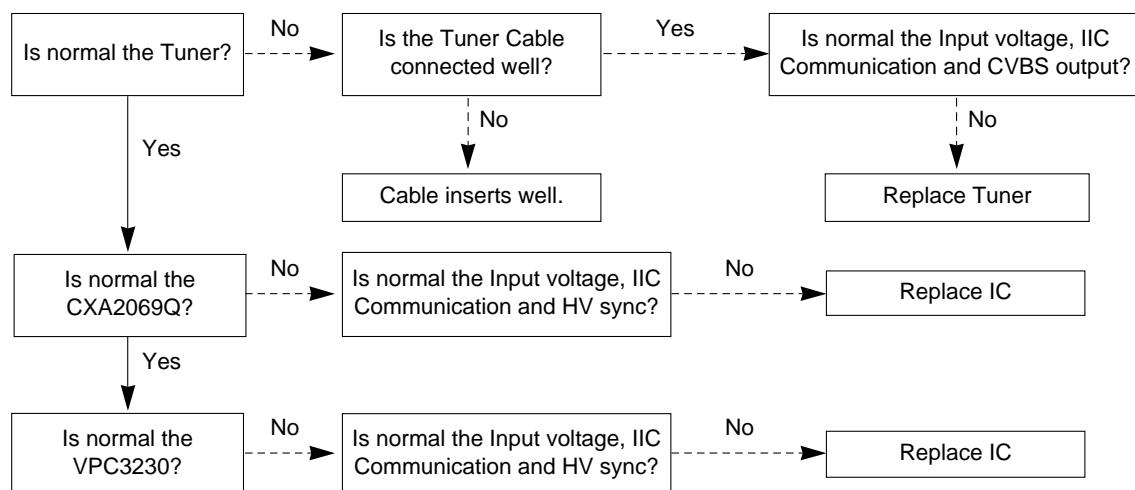

(2) Check follow

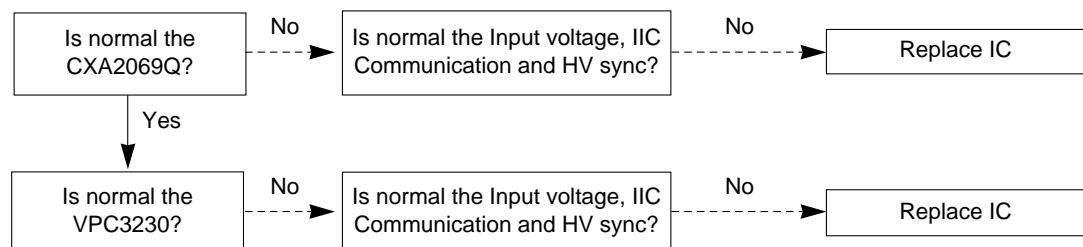

- Check the all input mode should become normality display.
- Check the Video(Main)/Data(Sub), Video(Main)/Video(Sub) should become normality display from the PIP mode or DW mode. (Re-Check it Swap)

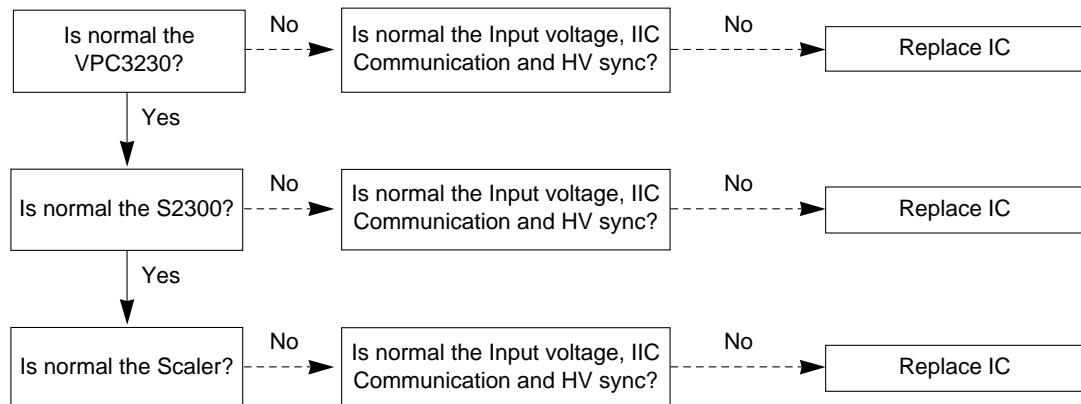

(3) In case of becomes unusual display from RF mode

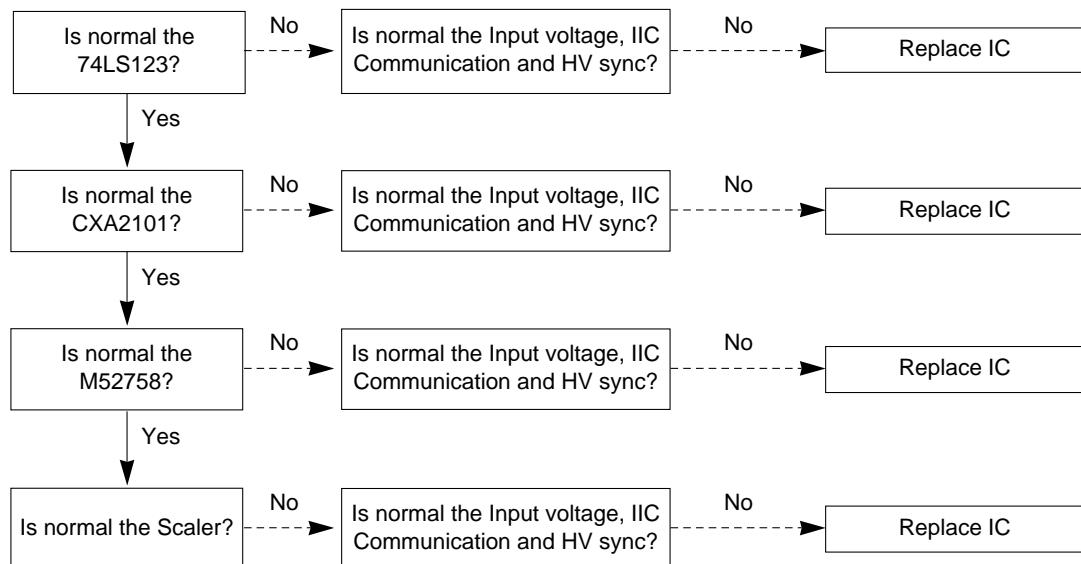

(4) In the case of becomes unusual display from RF, AV mode

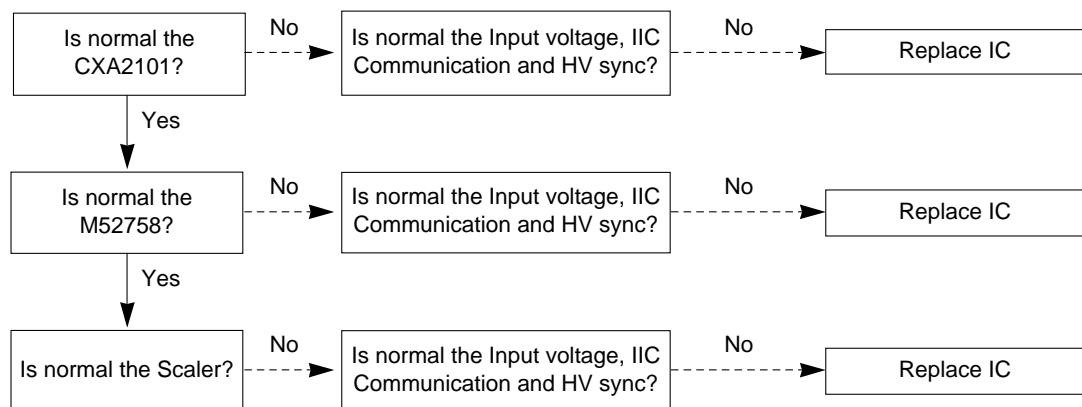

(5) In the case of becomes unusual display from RF, AV, Component 480i mode

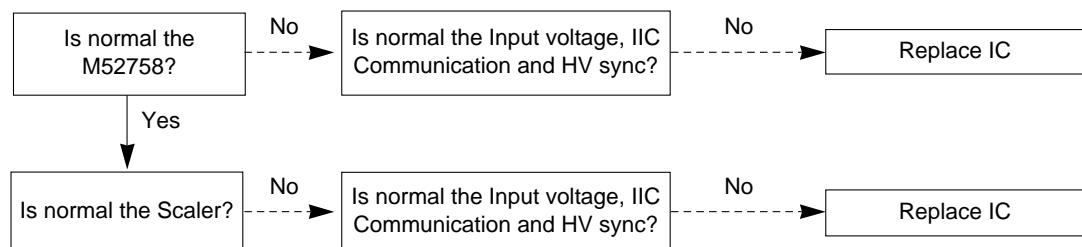

(6) In the case of becomes unusual display from Component DTV mode

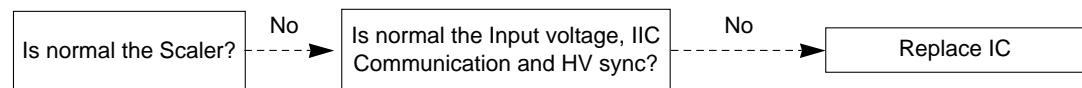

(7) In the case of becomes unusual display from RGB DTV mode

(8) In the case of becomes unusual display from RGB PC mode

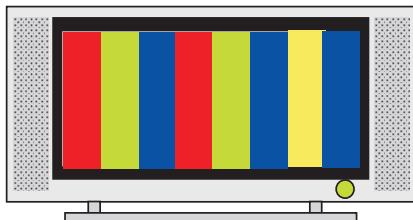

(8) In the case of becomes unusual display from DVI mode

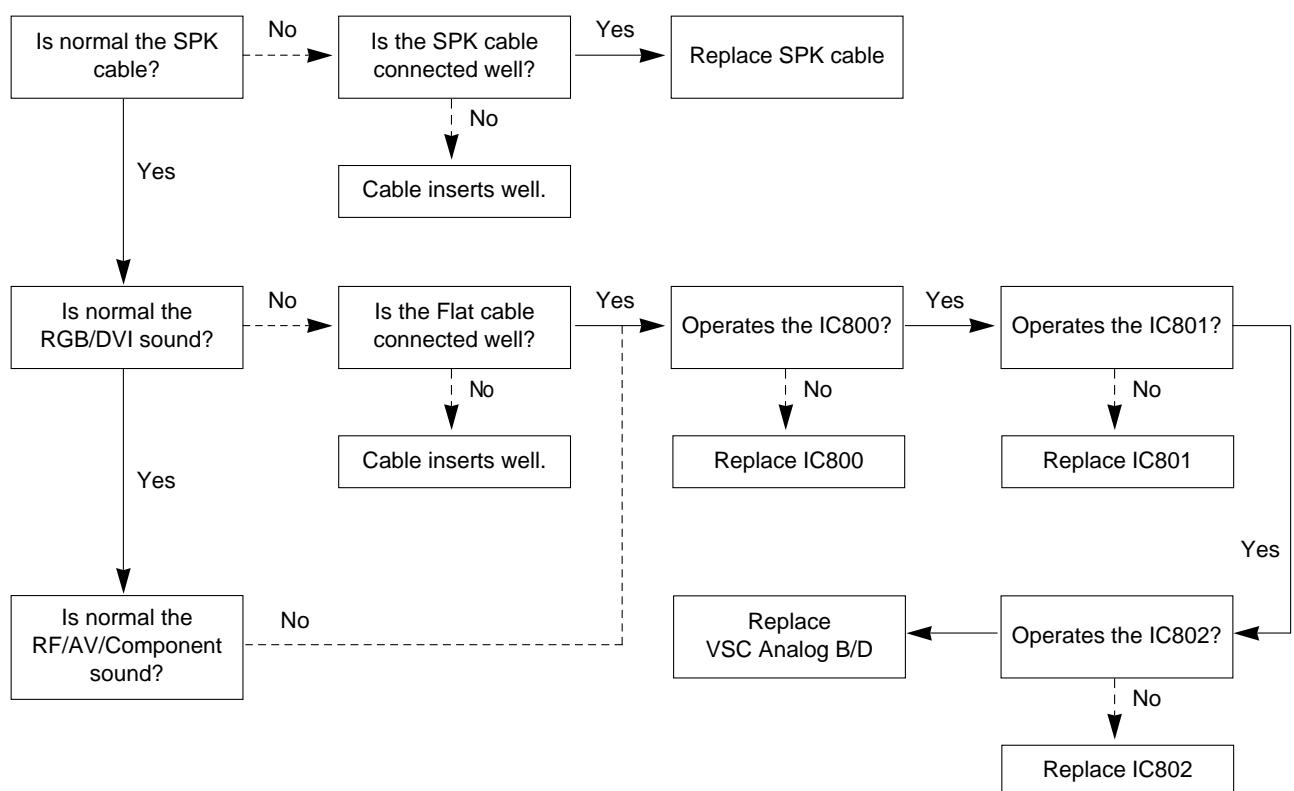

6. In case of no sound

(1) Symptom

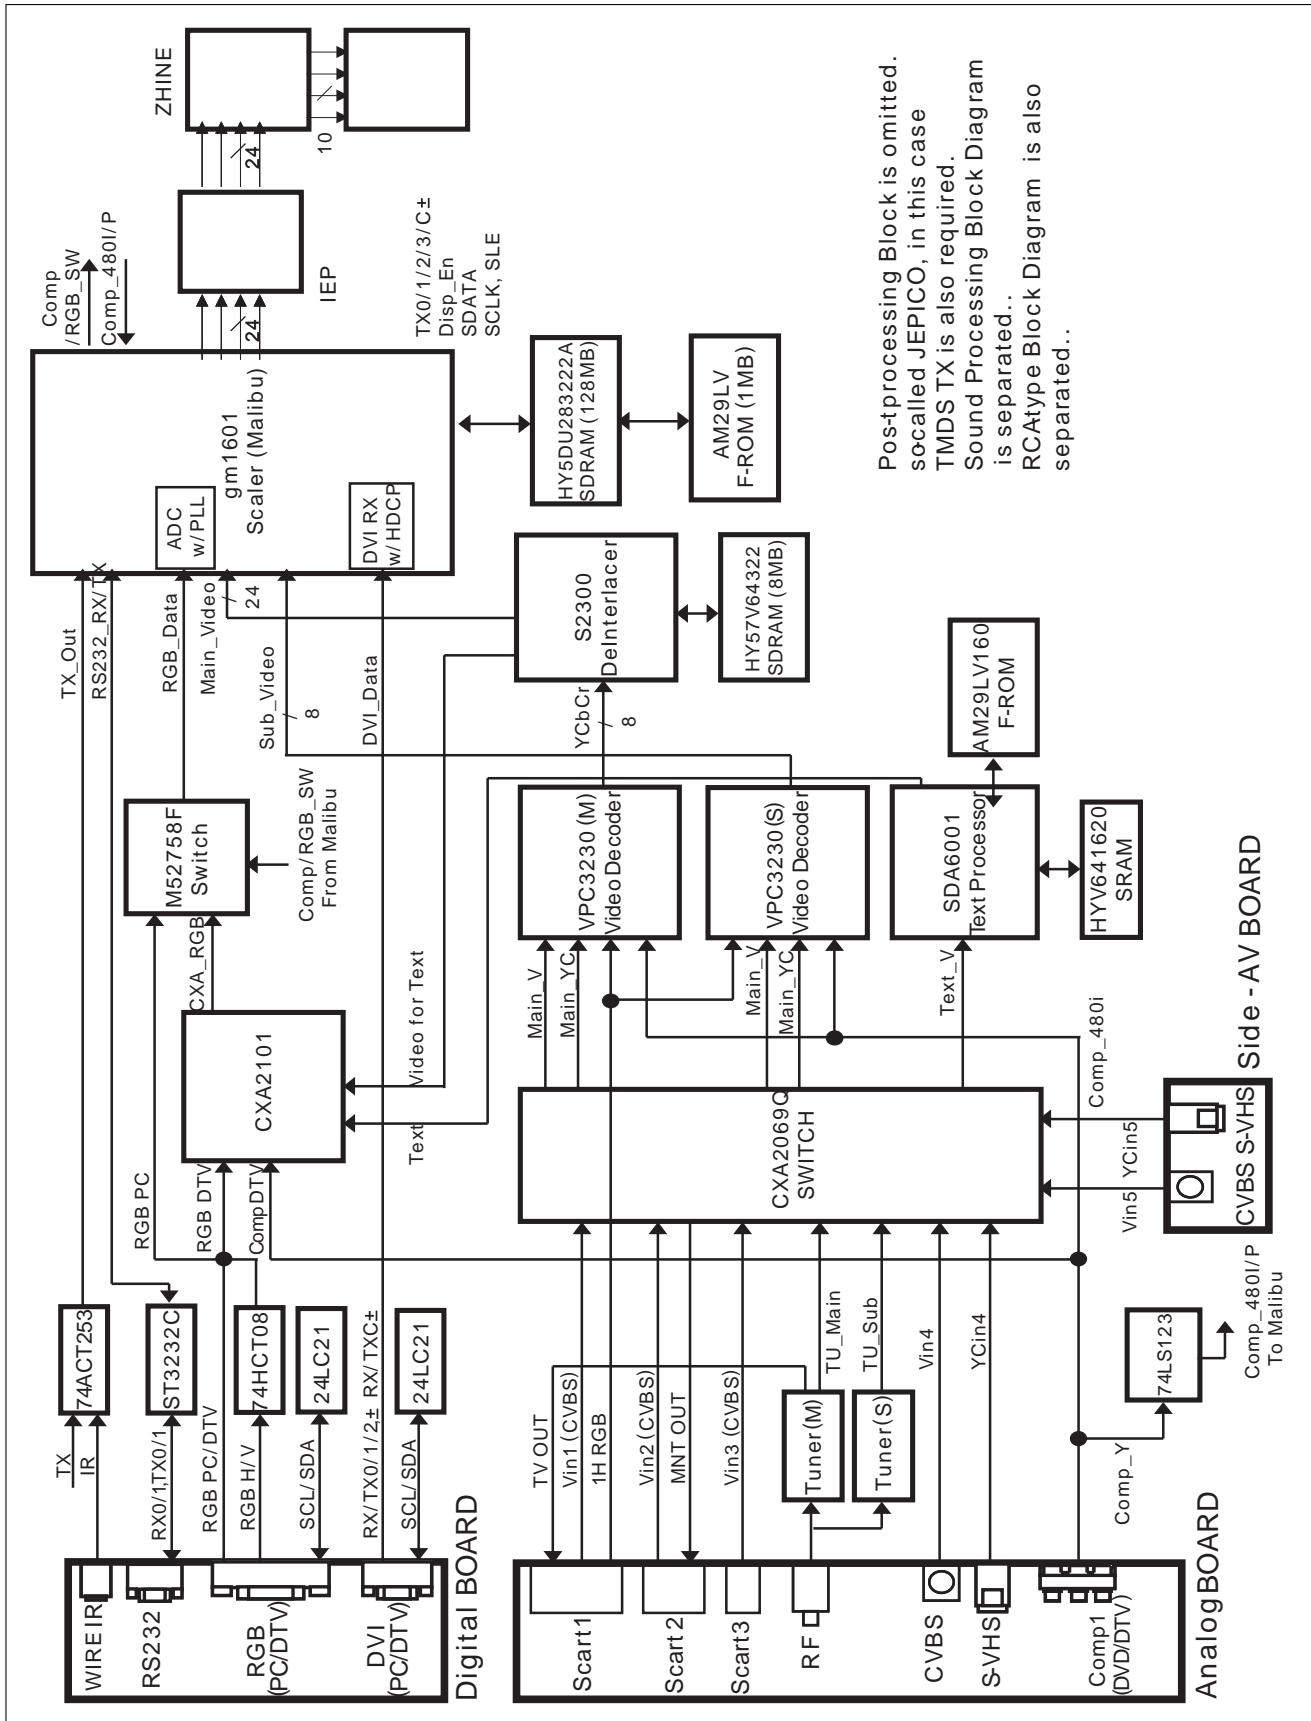

- LED is green
- Screen display but sound is not output

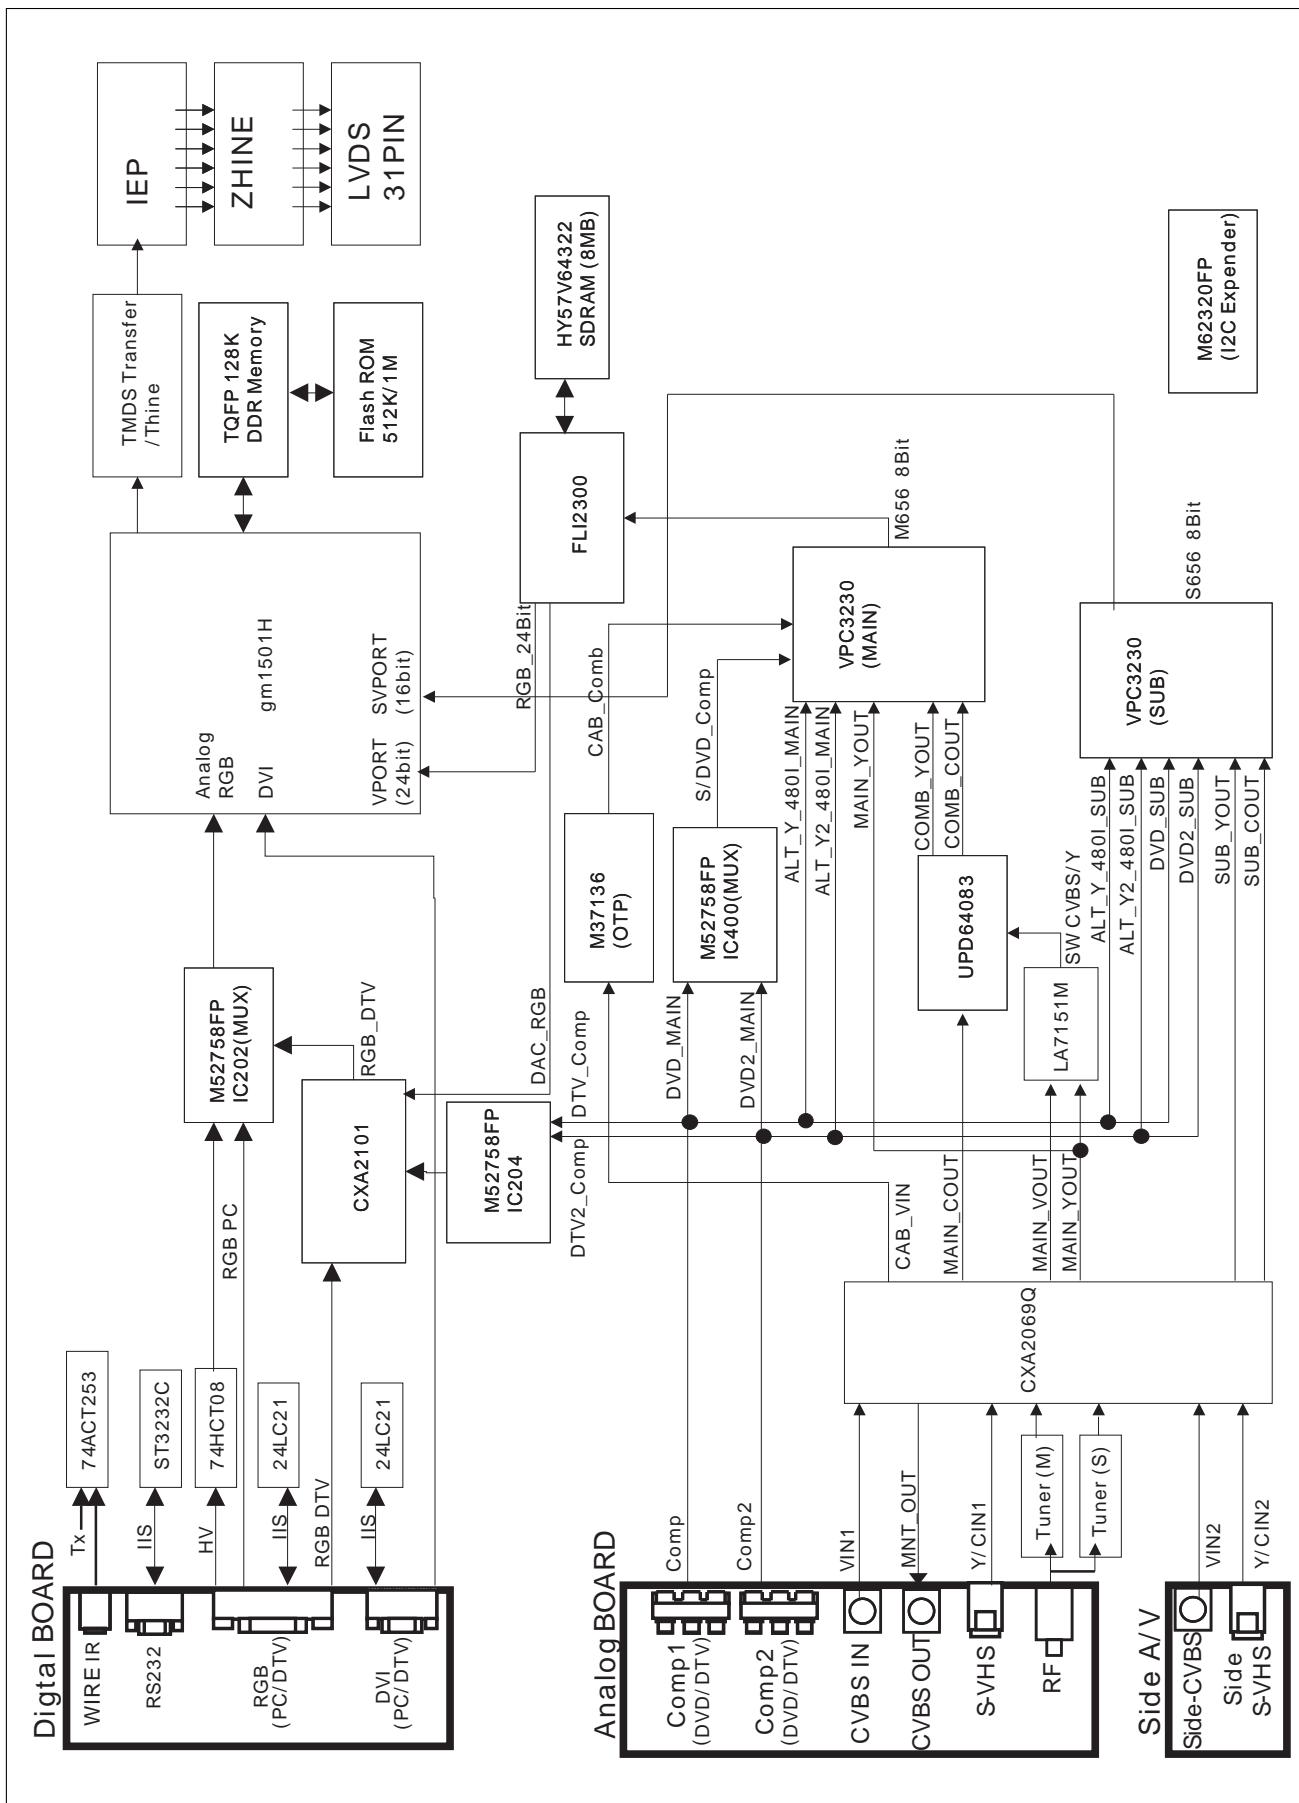

(2) Check follow
