## 16. ASSIGNMENTS

- 1) Apply import inspection specification to the matters which are not given in drawing specification method.
  - 2) Packing method follows specification approval.
  - 3) If INDUCTANCE : ref is not satisfied with given specification. internal structure disassembly inspection should be necessary.
  - 4) Wire bundle method.
    - \* CENTER SOLENOID: Error between the center of overall wire bundle area and the center of wire bundle is required to be smaller than 2 mm.
    - \* PIN SOLENOID : Error between the bottom barrier tape and winding start point is required to be smaller than 2 mm.
    - \* SOLENOID AFTER : Error between the last wire of the wire bundle and start wire of after-solenoid is required to be smaller than 2 mm.
    - \* TAB SOLENOID : Bundle should be continued from previous bundle. If bundle method is 2 layer, bundle should be done from top to bottom.
    - \* SPACE SOLENOID : The area between wires should be uniform. Error between start and start point of the wire bundle area is required to be smaller than 2mm. Error between end point and end point of the wire bundle area is required to be smaller than 2mm.
    - \* SOLENOID : No space is allowed between wires in bundling. The space between wire is required to be smaller than diameter of the wire\*2. In same layer no cross is allowed between wires.
  - 5) Auxiliary tape can be used in order to enhance. But it needs prior approval from design department.

## 16. ASSIGNMENTS

- 1) Apply import inspection specification to the matters which are not given in drawing specification method.
  - 2) Packing method follows specification approval.
  - 3) If INDUCTANCE : ref is not satisfied with given specification. internal structure disassembly inspection should be necessary.
  - 4) Wire bundle method.
    - \* CENTER SOLENOID: Error between the center of overall wire bundle area and the center of wire bundle is required to be smaller than 2 mm.
    - \* PIN SOLENOID : Error between the bottom barrier tape and winding start point is required to be smaller than 2 mm.
    - \* SOLENOID AFTER : Error between the last wire of the wire bundle and start wire of after-solenoid is required to be smaller than 2 mm.
    - \* TAB SOLENOID : Bundle should be continued from previous bundle. If bundle method is 2 layer, bundle should be done from top to bottom.
    - \* SPACE SOLENOID : The area between wires should be uniform. Error between start and start point of the wire bundle area is required to be smaller than 2mm. Error between end point and end point of the wire bundle area is required to be smaller than 2mm.
    - \* SOLENOID : No space is allowed between wires in bundling. The space between wire is required to be smaller than diameter of the wire\*2. In same layer no cross is allowed between wires.
  - 5) Auxiliary tape can be used in order to enhance. But it needs prior approval from design department.

## 16. ASSIGNMENTS

- 1) Apply import inspection specification to the matters which are not given in drawing specification method.
  - 2) Packing method follows specification approval.
  - 3) If INDUCTANCE : ref is not satisfied with given specification. internal structure disassembly inspection should be necessary.
  - 4) Wire bundle method.
    - \* CENTER SOLENOID: Error between the center of overall wire bundle area and the center of wire bundle is required to be smaller than 2 mm.
    - \* PIN SOLENOID : Error between the bottom barrier tape and winding start point is required to be smaller than 2 mm.
    - \* SOLENOID AFTER : Error between the last wire of the wire bundle and start wire of after solenoid is required to be smaller than 2 mm.
    - \* TAB SOLENOID : Bundle should be continued from previous bundle. If bundle method is 2 layer, bundle should be done from top to bottom.
    - \* SPACE SOLENOID : The area between wires should be uniform. Error between start and start point of the wire bundle area is required to be smaller than 2mm. Error between end point and end point of the wire bundle area is required to be smaller than 2mm.
    - \* SOLENOID : No space is allowed between wires in bundling. The space between wire is required to be smaller than diameter of the wire\*2. In same layer no cross is allowed between wires.
  - 5) Auxiliary tape can be used in order to enhance. But it needs prior approval from design department.
