RECORD OF REVISIONS

Revision No.	Revision Date	Page	Description
0.1	Apr, 17th, 2009	-	Preliminary Specification (First Draft)
0.2	Apr, 29th, 2009	-	Changed name of the model (SBV1→SBV2)
		7	Changed electrical characteristics IPB&Lamp
		10	Changed the connector of the internal backlight
		11	Changed the master&slave connector of the internal backlight
		A-3/14	Changed pallet ass'y spec.
		A-5/14	Changed name in the LCM label spec. (SBV1→SBV2)
		A-6/14	Changed pallet label spec. and name in the pallet label (SBV1→SBV2)
		A-13/14	Changed lamp electrical spec.
0.3	Jun, 15, 2009	6	Updated the Table 2.
		7	Updated the Table 3.
		16	Update the Table 9. (Changed Response Time)
		17	Modified the Notes 4.
		22	Add the Forbidden area.
		25	Changed the Packing Form
		A-3/14	Changed the Packing Ass'y
		A-4/14	Changed the Pallet Ass'y
		A-6/14	Updated the Label
0.4	Jun. 22. 2009	4, 20	Defined the weight spec.
		11	Changed the picture (CNT. direction)
		21	Updated the drawing
		22	Updated the drawing
0.5	Jul, 15, 2009	7	Modified the Table 3. (Striking Time : Max 5 → Min 1.5)
		11	Fixed the Rear view of LCM
		21, 22	Fixed the drawing
		24	Changed International Standard
		A-5, 6/14	Changed the Origin
		A-13/14	Updated the Lamp Electrical spec
1.0	Aug. 4. 2009	5	Added Notes 3.
		11,22	Changed the picture (CNT. direction)
		16,17	Changed min./typ. CR & gray scale level L0

Product Specification

1. General Description

The LC320WXE is a Color Active Matrix Liquid Crystal Display with an integral External Electrode Fluorescent Lamp (EEFL) backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally black mode. It has a 31.51 inch diagonally measured active display area with WXGA resolution (768 vertical by 1366 horizontal pixel array). Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in Horizontal stripes. Gray scale or the luminance of the sub-pixel color is determined with a 8-bit gray scale signal for each dot, thus presenting a palette of more than 16.7M(true) colors.

It has been designed to apply the 8-bit 1-port LVDS interface.

It is intended to support LCD TV, PCTV where high brightness, super wide viewing angle, high color gamut, high color depth and fast response time are important.

General Features

Active Screen Size	31.51 inches(800.4mm) diagonal
Outline Dimension	760.0 mm(H) x 450.0 mm(V) x 36.0 mm(D) (Typ.)
Pixel Pitch	510.75 μ m x 170.25 μ m x RGB
Pixel Format	1366 horiz. by 768 vert. pixels RGB horizontal stripe arrangement
Color Depth	8bit, 16,7 M colors
Luminance, White	350 cd/m ² (Center 1 point) (Typ.)
Viewing Angle (CR>10)	Viewing angle free (R/L 178(Min.), U/D 178(Min.))
Power Consumption	Total 73.7Watt (Typ.) (Logic=3.7 W, Back Light= 70W @ with Inverter)
Weight	4,000g(Typ.)
Display Operating Mode	Transmissive mode, normally black
Surface Treatment	Hard coating(3H), anti-glare treatment of the front polarizer (Haze 13%)

Product Specification

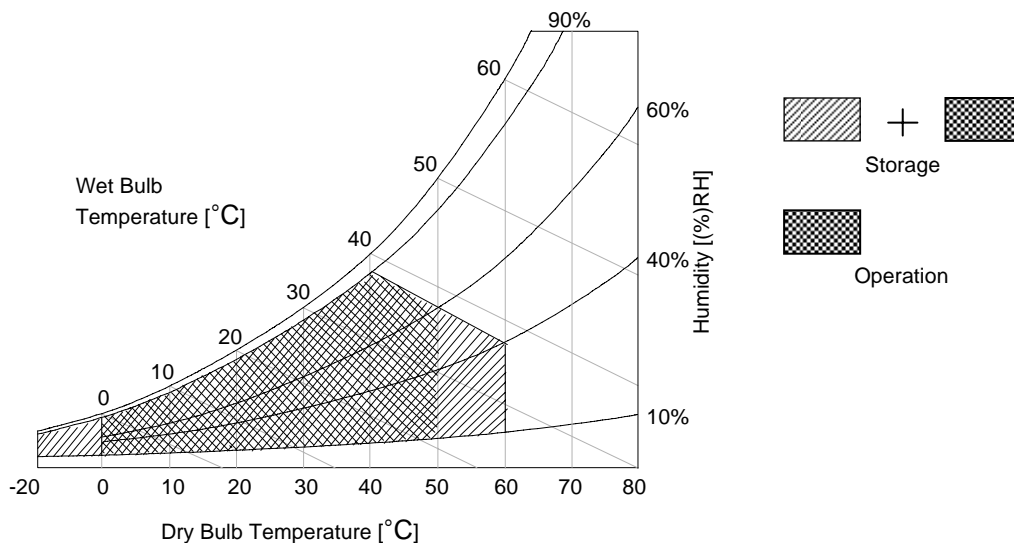

2. Absolute Maximum Ratings

The following items are maximum values which, if exceeded, may cause faulty operation or damage to the LCD module.

Table 1. ABSOLUTE MAXIMUM RATINGS

Parameter		Symbol	Value		Unit	Remark
			Min	Max		
Power Input Voltage	LCM	V _{LCD}	-0.3	+14.0	V _{dc}	at 25 ± 2 °C
B/L Input voltage	Operating Voltage (one side)	V _{OP}	600	1300	V[RMS]	at 25 ± 2 °C
Operating Temperature		T _{OP}	0	+50	°C	Note 1,2
Storage Temperature		T _{ST}	-20	+60	°C	
Operating Ambient Humidity		H _{OP}	10	90	%RH	
Storage Humidity		H _{ST}	10	90	%RH	

- Notes :
1. Temperature and relative humidity range are shown in the figure below.
Wet bulb temperature should be Max 39 °C and no condensation of water.
 2. Gravity mura can be guaranteed below 40 °C condition.
 3. The mold backlight can be discolored in a high temperature by long time operation but it doesn't care about the picture quality.

Product Specification

3. Electrical Specifications

3-1. Electrical Characteristics

It requires two power inputs. One is employed to power for the LCD circuit.

The other is used for the EEFL backlight.

Table 2. ELECTRICAL CHARACTERISTICS

Parameter	Symbol	Value			Unit	Note
		Min	Typ	Max		
Circuit :						
Power Input Voltage	V_{LCD}	10.8	12.0	13.2	V_{DC}	
Power Input Current	I_{LCD}	-	310	405	mA	1
		-	535	695	mA	2
Power Consumption	P_{LCD}	-	3.7	4.9	Watt	1
Rush current	I_{RUSH}	-	-	3.0	A	3

Notes : 1. The specified current and power consumption are under the $V_{LCD}=12.0V$, $25 \pm 2^{\circ}C$, $f_V=60Hz$ condition whereas mosaic pattern(8 x 6) is displayed and f_V is the frame frequency.

2. The current is specified at maximum current pattern.

3. The duration of rush current is about 2ms and rising time of power input is 0.5ms (min.)

White : 255 Gray
Black : 0 Gray

Mosaic Pattern(8 x 6)

Product Specification

Table 3. ELECTRICAL CHARACTERISTICS of Back Light Assembly & Lamp (Continue)

Parameter	Symbol	Values			Unit	Notes
		Min	Typ	Max		
Backlight Assembly :						
Operating Voltage (one side, fBL=63KHz, IBL= 65mArms)	VBL		970		V _{RMS}	1, 2
Operating Current (one side)	IBL	-	65	-	mA _{RMS}	1
Established Starting Voltage (one side)	Vs	0 °C	-	1100	V _{RMS}	1, 3
		25 °C	-	990		
Operating Frequency	fBL	61	63	65	kHz	4
Striking Time	S TIME	1.5	-		sec	3
Power Consumption	PBL		70		Watt	6
Burst Dimming Duty	PWM Duty	20		100	%	9
Burst Dimming Frequency	1/T	94	-	126	Hz	9

Parameter	Symbol	Values			Unit	Notes
		Min	Typ	Max		
Lamp : APPENDIX-IX						
Lamp Voltage (one side)	VLAMP	760	970	1110	V _{RMS}	2
Lamp Current (one side)	ILAMP	3	6.5	8.0	mA _{RMS}	
Discharge Stabilization Time	Ts	-	-	3	Min	5
Lamp Frequency	f LAMP	40	63	80	KHz	
Lamp Temperature	TLAMP			130	°C	
Established Starting Voltage (one side)	Vs	0 °C		1100	V _{RMS}	3
		25 °C		990		
Life Time		50,000			Hrs	7

Notes : The design of the inverter must have specifications for the lamp in LCD Assembly.

The electrical characteristics of inverter are based on High-High Driving type.

The performance of the lamps in LCM, for example life time or brightness, is extremely influenced by the characteristics of the DC-AC inverter. So, all the parameters of an inverter should be carefully designed so as not to produce too much leakage current from high-voltage output of the inverter.

When you design or order the inverter, please make sure unwanted lighting caused by the mismatch of the lamp and the inverter (no lighting, flicker, etc) has never been occurred. When you confirm it, the LCD- Assembly should be operated in the same condition as installed in your instrument.

※ Do not attach a conductive tape to lamp connecting wire.

If you attach conductive tape to the lamp wire, not only luminance level can be lower than typical one but also inverter operate abnormally on account of leakage current which is generated between lamp wire and conductive tape.

1. Specified values are defined for a Backlight Assembly. (IBL : 10 Lamp, 6.5mA/Lamp)

2. Operating voltage is measured at $25 \pm 2^{\circ}\text{C}$ (after 2hr.aging). The variance range for operating voltage is $\pm 10\%$.

3. The established starting voltage [Vs] should be applied to the lamps for more than Striking time (S TIME) for start-up. Inverter open voltage must be more than established starting voltage. Otherwise, the lamps may not be turned on. The used lamp current is typical value.

Product Specification

$$V_s = (V_{pk-pk}) / [2 \cdot \sqrt{2}]$$

4. Lamp frequency may produce interference with horizontal synchronous frequency. As a result, the may cause beat on the display. Therefore, lamp frequency shall be away as much as possible from the horizontal synchronous frequency and its harmonics range in order to prevent interference.

There is no reliability problem of lamp, if use out of range of operation frequency (61 kHz~65 kHz) on CAS

5. The brightness of the lamp after lighted for 5minutes is defined as 100%.

T_S is the time required for the brightness of the center of the lamp to be not less than 95% at typical current.

The screen of LCD module may be partially dark by the time the brightness of lamp is stable after turn on.

6. Maximum level of power consumption is measured at initial turn on.

Typical level of power consumption is measured after 2hrs aging at $25 \pm 2^\circ\text{C}$.

7. The life time is determined as the time at which brightness of the lamp is 50% compared to that of initial value at the typical lamp current on condition of continuous operating at $25 \pm 2^\circ\text{C}$, based on duty 100%.

8. The output of the inverter must have symmetrical(negative and positive) voltage and current waveform (Unsymmetrical ratio is less than 10%). Please do not use the inverter which has not only unsymmetrical voltage and current but also spike wave.

Requirements for a system inverter design, which is intended to achieve better display performance, power efficiency and more reliable lamp characteristics.

It can help increase the lamp lifetime and reduce leakage current.

- The asymmetry rate of the inverter waveform should be less than 10%.
- The distortion rate of the waveform should be within $\sqrt{2} \pm 10\%$.

* Inverter output waveform had better be more similar to ideal sine wave.

* Asymmetry rate:

$$|I_p - I_{-p}| / I_{op} \times 100\%$$

* Distortion rate

$$I_p \text{ (or } I_{-p}) / I_{op}$$

Product Specification

9. The reference method of burst dimming duty ratio.

It is recommended to use synchronous V-sync frequency to prevent waterfall
(Vsync x 2 =Burst Frequency)

- ※ We recommend not to be much different between PWM duty and lout duty .
- ※ Dimming current output rising and falling time may produce humming and inverter trans' sound noise.
- ※ Burst dimming duty should be 100% for more than 1second after turn on.
- ※ Equipment
Oscilloscope :TDS3054B(Tektronix)
Current Probe : P6022 AC (Tektronix)
High Voltage Probe: P5100(Tektronix)

10. The Cable between the backlight connector and its inverter power supply should be connected directly with a minimized length. The longer cable between the backlight and the inverter may cause the lower luminance of lamp and may require more higher starting voltage (Vs).

11. The operating current must be measured as near as backlight assembly input.

12. The operating current unbalance between left and right must be under 10% of Typical current
| Left(Master) current – Right(Slave) Current | < 10% of typical current

Product Specification

3-2. Interface Connections

This LCD module employs two kinds of interface connection, a 30-pin connector is used for the module electronics and 3-pin (65002HP-03P) connector is used for the internal backlight system.

3-2-1. LCD Module

-LCD Connector(CN1) : FI-X30SSL-HF (Manufactured by JAE) or Equivalent

-Mating Connector : FI-X30C2L (Manufactured by JAE) or Equivalent

Product Specification

3-3. Signal Timing Specifications

Table 6-1 shows the signal timing required at the input of the LVDS transmitter. All of the interface signal timing should be satisfied with the following specification for normal operation.

[DE (Data Enable) Only]

ITEM	Symbol		Min	Typ	Max	Unit	Note
DCLK	Period	tCLK	12.5	13.8	15.8	ns	
	Frequency	-	63	72.4	80	MHz	
Hsync	Period	tHT	1456	1528	1920	tCLK	
	Horizontal Valid	tHV	1366	1366	1366	tCLK	
	Horizontal Blank	-	tHP- tHV	162	tHP- tHV		
	Frequency	fH	45	47.4	50	KHz	
	Width	tWH	-	32	-	tCLK	
	Horizontal Back Porch	tHBP	24	50	-		
	Horizontal Front Porch	tHFP	40	80	-		
Vsync	Period	tVT	776 (894)	790 (948)	1063 (1008)	tHP	Note 1) NTSC : 57~63Hz (PAL : 47~53Hz)
	Vertical Valid	tVV	768	768	768	tHP	
	Vertical Blank	-	tVP- tVV	22	tVP- tVV	tHP	
	Frequency	fV	57 (47)	60 (50)	63 (53)	Hz	
	Width	tWV	-	5 (12)	-	tHP	
	Vertical Back Porch	tVBP	5	15 (128)	-	Hz	
	Vertical Front Porch	tVFP	1	2 (40)	-	tHP	

Note :

1. The input of HSYNC & VSYNC signal does not have an effect on normal operation(DE Only Mode). If you use spread spectrum of EMI, add some additional clock to minimum value for clock margin.
2. The performance of the electro-optical characteristics may be influenced by variance of the vertical refresh rate and the horizontal frequency
3. Timing should be set based on clock frequency.

Product Specification

3-4. Signal Timing Waveforms

Product Specification

3-5. Color Data Reference

The brightness of each primary color (red, green, blue) is based on the 8-bit gray scale data input for the color. The higher binary input, the brighter the color. Table 7 provides a reference for color versus data input.

Table 7. COLOR DATA REFERENCE

Color		Input Color Data																							
		RED								GREEN								BLUE

T7	0.5	-	T2	ms	4
T8	0	-	-	ms	4
T9	$T_2 + T_3$	-	5	s	

- Note :
1. Please avoid floating state of interface signal at invalid period.
 2. When the interface signal is invalid, be sure to pull down the power supply V_{LCD} to 0V.
 3. The T3/T4 is recommended value, the case when failed to meet a minimum specification, abnormal display would be shown. There is no reliability problem.
 4. If the on time of signals (Interface signal and Option signals) precedes the on time of Power (V_{LCD}), it will be happened abnormal display.
 5. T6 should be measured after the Module has been fully discharged between power off and on period.

Product Specification

4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and for 60 minutes in a dark environment at $25\pm 2^{\circ}\text{C}$. The values are specified at an approximate distance 50cm from the LCD surface at a viewing angle of Φ and θ equal to 0° .

FIG. 1 shows additional information concerning the measurement equipment and method.

FIG. 1 Optical Characteristic Measurement Equipment and Method

Table 9. OPTICAL CHARACTERISTICS

$T_a = 25\pm 2^{\circ}\text{C}$, $V_{\text{LCD}} = 12.0\text{V}$, $f_v = 60\text{Hz}$, $D_{\text{clk}} = 72.4\text{MHz}$, $I_{\text{BL}} = 65\text{mA}_{\text{rms}}$

Gray Scale			2.2				7

Product Specification

Notes :1. Contrast Ratio(CR) is defined mathematically as :

$$CR = \frac{\text{Surface Luminance at all white pixels}}{\text{Surface Luminance at all black pixels}}$$

It is measured at center 1-point.

2. Surface luminance is determined after the unit has been 'ON' and 60min after lighting the backlight in a dark environment at $25 \pm 2^\circ\text{C}$. Surface luminance is the luminance value at center 1-point across the LCD surface 50cm from the surface with all pixels displaying white. For more information see the FIG. 2.

3. The variation in surface luminance, δ WHITE is defined as :

$$\delta \text{ WHITE}(5P) = \text{Maximum}(L_{on1}, L_{on2}, L_{on3}, L_{on4}, L_{on5}) / \text{Minimum}(L_{on1}, L_{on2}, L_{on3}, L_{on4}, L_{on5})$$

Where L_{on1} to L_{on5} are the luminance with all pixels displaying white at 5 locations .

For more information, see the FIG. 2.

4. Response time is the time required for the display to transit from black to white (Rise Time, Tr_R) and from white to black (Decay time, Tr_D). For additional information see the FIG. 3.

5. G to G σ is Variation of Gray to Gray response time composing a picture

$$G \text{ to } G (\sigma) = \sqrt{\frac{\sum(X_i - u)^2}{N}}$$

X_i = Individual Data
 u = Data average
 N : The number of Data

6. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD module surface. For more information, see the FIG. 4.

7. Gray scale specification

Gamma Value is approximately 2.2. For more information, see the Table 10.

Table 10. GRAY SCALE SPECIFICATION

Gray Level	Luminance [%] (Typ.)
L0	0.08
L15	0.32
L31	1.10
L47	2.60
L63	4.90
L79	8.10
L95	12.1
L111	16.7
L127	21.6
L143	28.0
L159	35.4
L175	43.9
L191	53.3
L207	64.1
L223	75.8
L239	88.0
L255	100

Product Specification

Measuring point for surface luminance & measuring point for luminance variation.

FIG. 2 5 Points for Luminance Measure

Response time is defined as the following figure and shall be measured by switching the input signal for "Gray(N)" and "Black or White".

5. Mechanical Characteristics

Table 12 provides general mechanical characteristics.

Table 12. MECHANICAL CHARACTERISTICS

Item	Value	
Outline Dimension	Horizontal	760.0mm
	Vertical	450.0 mm
	Depth	36.0 mm
Bezel Area	Horizontal	703.8mm
	Vertical	398.4mm
Active Display Area	Horizontal	697.685mm
	Vertical	392.256mm
Weight	4000 g (Typ.), 4200g (Max)	

Note : Please refer to a mechanical drawing in terms of tolerance at the next page.

Product Specification

<FRONT VIEW>

- NOTES
 1. UNSPECIFIED TOLERANCES TO BE $\pm 0.5\text{MM}$
 2. TILT AND PARTIAL DISPOSITION TOLERANCE OF DISPLAY AREA ARE AS FOLLOWING.
 (1) Y-DIRECTION: $1 \text{ A-B} < 1.5$
 (2) X-DIRECTION: $1 \text{ C-D} < 1.5$

DETAIL A
SCALE 1/2

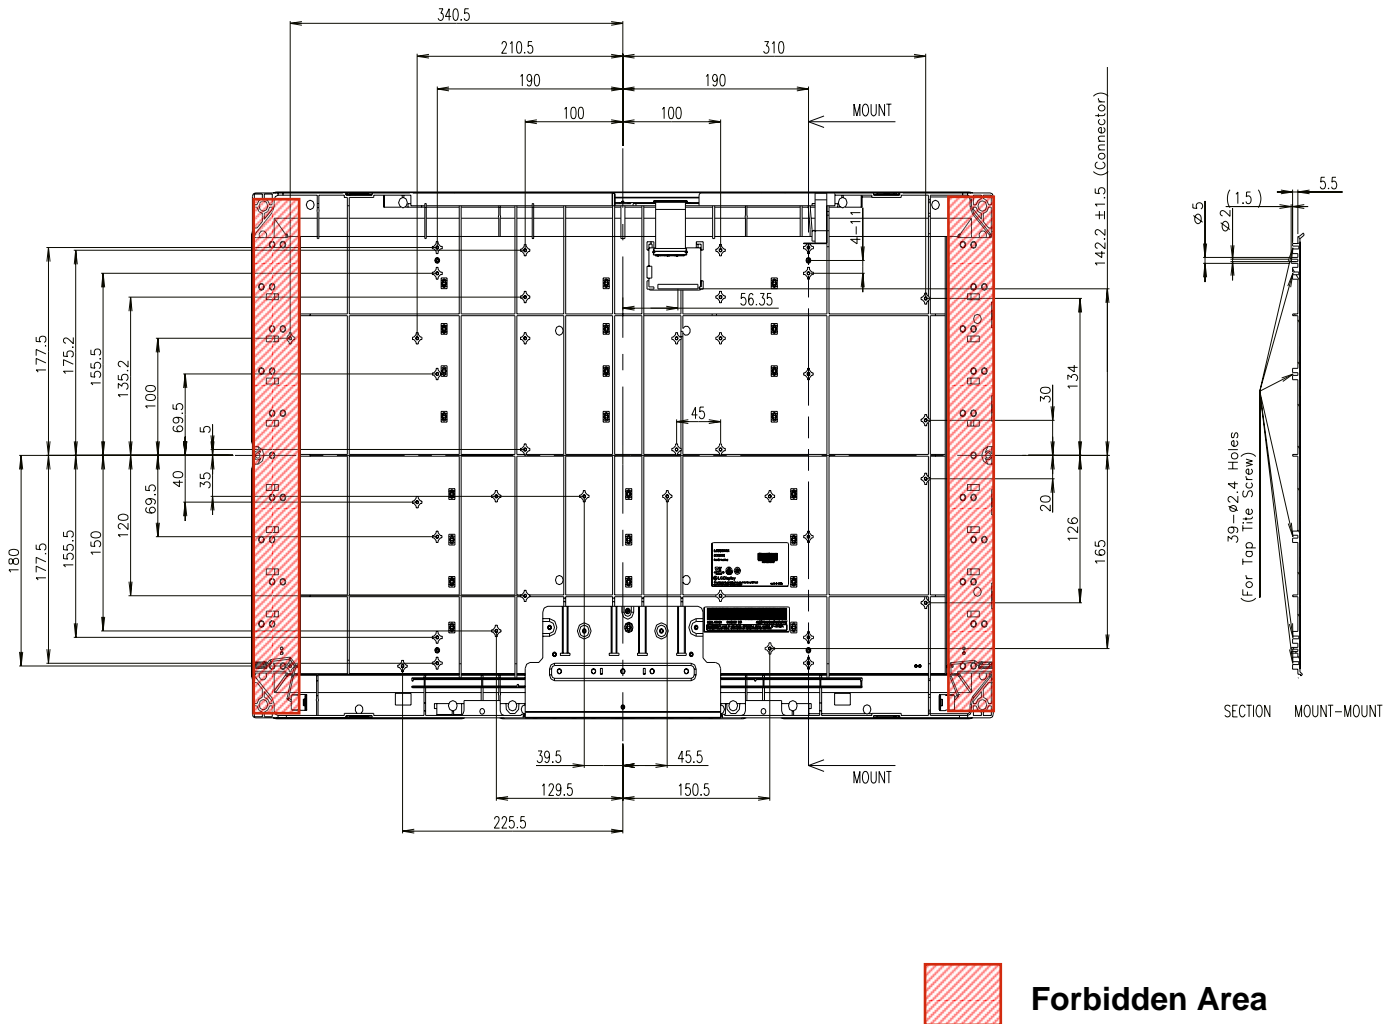

SECTION THM_A-THM_A

Product Specification

<REAR VIEW>

Notes : It should be recommended that any exterior materials do not pass within the forbidden area (for example, electrical cable, system board, etc) not to cause abnormal voltage waveform of Backlight unit.

If any exterior materials pass within the forbidden area, It should be carefully designed to satisfy with 'Table 3. Electrical characteristics for IPB & Lamp'.

Product Specification

6. Reliability**Table 13. ENVIRONMENT TEST CONDITION**

No.	Test Item	Condition
1	High temperature storage test	Ta= 60°C 240h
2	Low temperature storage test	Ta= -20°C 240h
3	High temperature operation test	Ta= 50°C 50%RH 240h
4	Low temperature operation test	Ta= 0°C 240h
5	Vibration test (non-operating)	Wave form : random Vibration level : 1.0G RMS Bandwidth : 10-300Hz Duration : X,Y,Z Each direction per 10 min.
6	Shock test (non-operating)	Shock level : 100G Waveform : half sine wave, 2ms Direction : ±X, ±Y, ±Z One time each direction
7	Humidity condition Operation	Ta= 40 °C ,90%RH
8	Altitude operating storage / shipment	0 - 15,000 ft 0 - 40,000 ft

Note : Before and after Reliability test, LCM should be operated with normal function.

7. International Standards

7-1. Safety

- a) UL 60065, Seventh Edition, Underwriters Laboratories Inc.
Audio, Video and Similar Electronic Apparatus - Safety Requirements.
- b) CAN/CSA C22.2 No.60065:03, Canadian Standards Association.
Audio, Video and Similar Electronic Apparatus - Safety Requirements.
- c) EN 60065:2002 + A11:2008, European Committee for Electrotechnical Standardization (CENELEC).
Audio, Video and Similar Electronic Apparatus - Safety Requirements.
- d) IEC 60065:2005 + A1:2005, The International Electrotechnical Commission (IEC).
Audio, Video and Similar Electronic Apparatus - Safety Requirements.

7-2. EMC

- a) ANSI C63.4 "American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz." American National Standards Institute (ANSI), 2003.
- b) CISPR 22 "Information technology equipment – Radio disturbance characteristics – Limit and methods of measurement." International Special Committee on Radio Interference (CISPR), 2005.
- c) CISPR 13 "Sound and television broadcast receivers and associated equipment – Radio disturbance characteristics – Limits and method of measurement." International Special Committee on Radio Interference (CISPR), 2006.

7-3. Environment

- a) RoHS, Directive 2002/95/EC of the European Parliament and of the council of 27 January 2003

Product Specification

8. Packing**8-1. Information of LCM Label**

a) Lot Mark

A	B	C	D	E	F	G	H	I	J	K	L	M
---	---	---	---	---	---	---	---	---	---	---	---	---

A,B,C : SIZE(INCH)
E : MONTH

D : YEAR
F ~ M : SERIAL NO.

Note

1. YEAR

Year	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010
Mark	1	2	3	4	5	6	7	8	9	0

2. MONTH

Month	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Mark	1	2	3	4	5	6	7	8	9	A	B	C

b) Location of Lot Mark

Serial No. is printed on the label. The label is attached to the backside of the LCD module.
This is subject to change without prior notice.

8-2. Packing Form

a) LCM quantity in one Box : 5 pcs

b) Box Size : 825mm X 365mm X 517mm

Product Specification

9. Precautions

Please pay attention to the followings when you use this TFT LCD module.

9-1. Mounting Precautions

- (1) You must mount a module using specified mounting holes (Details refer to the drawings).
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

9-2. Operating Precautions

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage :
 $V = \pm 200\text{mV}$ (Over and under shoot voltage)
- (2) Response time depends on the temperature. (In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.)
 And in lower temperature, response time (required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.
- (7) Please do not give any mechanical and/or acoustical impact to LCM. Otherwise, LCM can't be operated its full characteristics perfectly.
- (8) A screw which is fastened up the steels should be a machine screw.
 (if not, it causes metallic foreign material and deal LCM a fatal blow)
- (9) Please do not set LCD on its edge.
- (10) Partial darkness may happen during 3~5 minutes when LCM is operated initially in condition that luminance is under 40% at low temperature (under 5°C). This phenomenon which disappears naturally after 3~5 minutes is not a problem about reliability but LCD characteristic.

Product Specification

9-3. Electrostatic Discharge Control

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

9-4. Precautions for Strong Light Exposure

Strong light exposure causes degradation of polarizer and color filter.

9-5. Storage

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.
It is recommended that they be stored in the container in which they were shipped.

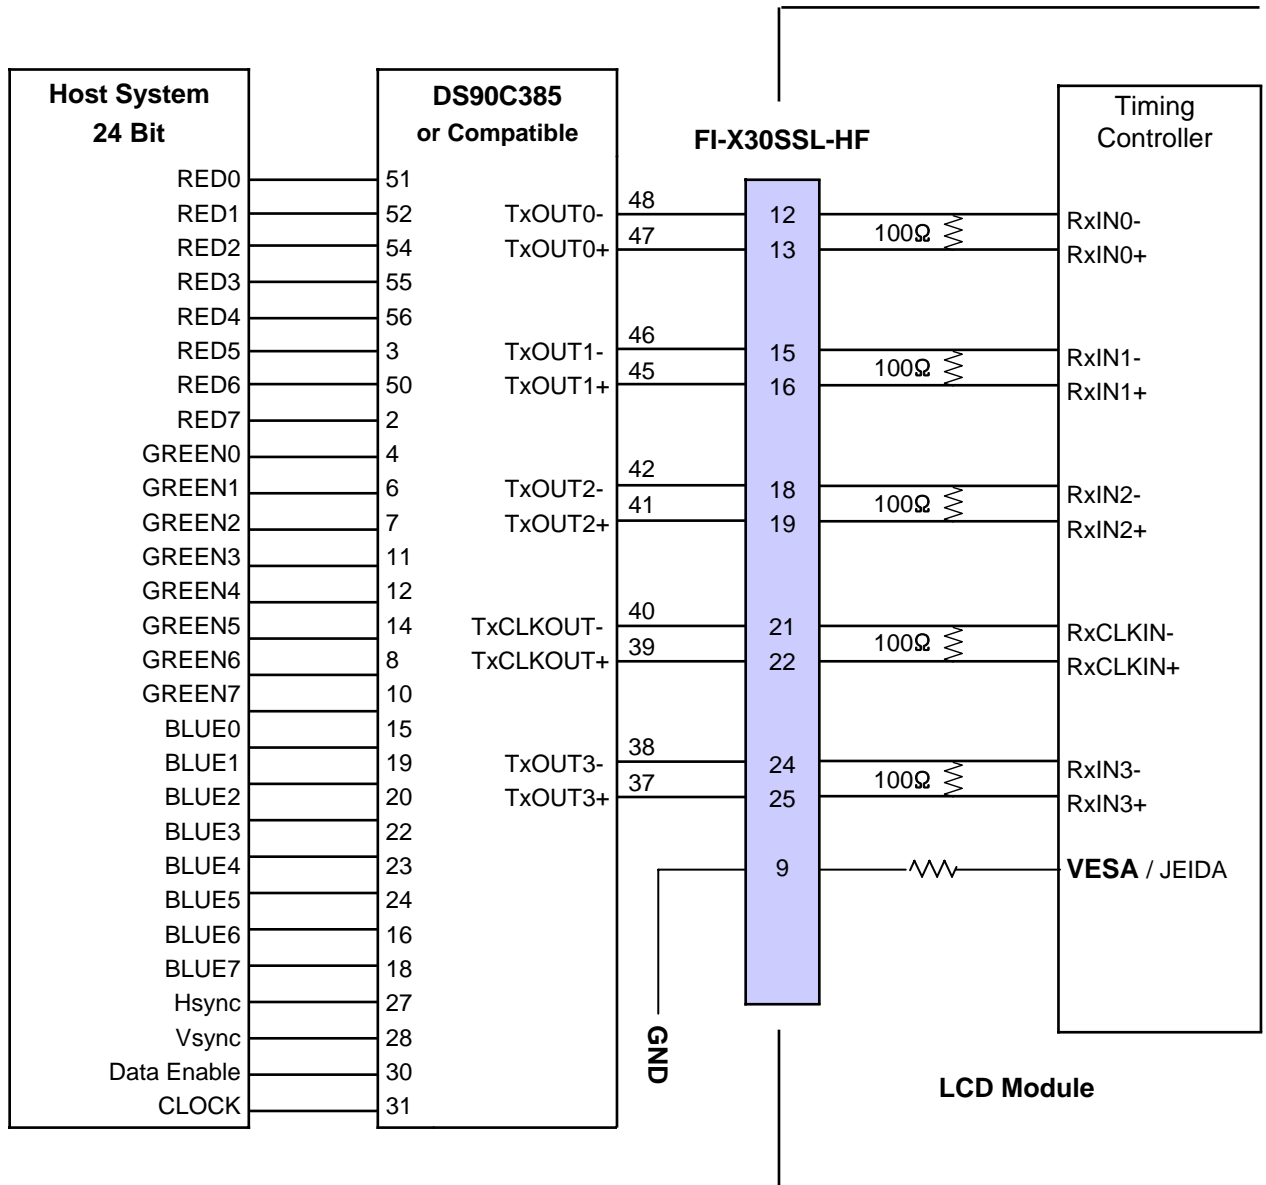

9-6. Handling Precautions for Protection Film

- (1) The protection film is attached to the bezel with a small masking tape.
When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the bezel surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.

Product Specification

APPENDIX-I-1

■ Required signal assignment for Flat Link Transmitter(Pin9="L", or NC")

Notes:

1. The LCD module uses a 100 Ohm(Ω) resistor between positive and negative lines of each receiver input.
2. Refer to LVDS transmitter data sheet for detail descriptions. (DS90C385 or Compatible)
3. '7' means MSB and '0' means LSB at R,G,B pixel data.

Product Specification

APPENDIX-I-2

■ Required signal assignment for Flat Link Transmitter(Pin9="H")

Notes:

1. The LCD module uses a 100 Ohm(Ω) resistor between positive and negative lines of each receiver input.
2. Refer to LVDS transmitter data sheet for detail descriptions. (DS90C385 or Compatible)
3. '7' means MSB and '0' means LSB at R,G,B pixel data.

Product Specification

APPENDIX- VI-1

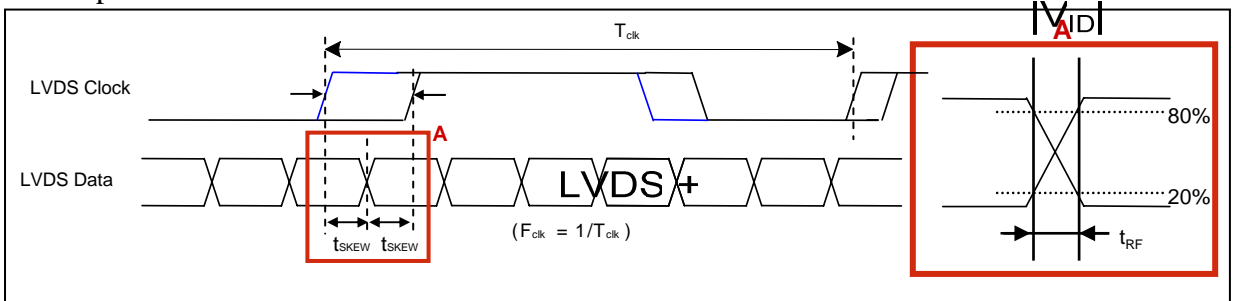

LVDS Input characteristics

1. DC Specification

Description	Symbol	Min	Max	Unit	Notes
LVDS Single end Voltage	$ V_{ID} $	200	600	mV	-
LVDS Common mode Voltage	V_{CM}	1.0	1.5	V	-
LVDS Input Voltage Range	V_{IN}	0.7	1.8	V	-
Change in common mode Voltage	ΔV_{CM}	LVDS -	250	mV	-

2. AC Specification

Description	Symbol	Min	Max	Unit	Notes
LVDS Clock to Data Skew Margin	t_{SKEW}		$ (0.20 \cdot T_{clk})/7 $	ps	$\# V_{ID} = (LVDS+) - (LVDS-) $
LVDS Clock/DATA Rising/Falling time	t_{RF}	260	$(0.3 \cdot T_{clk})/7$	ps	$\# V_{CM} = \{(LVDS+)^2 + (LVDS-)^2\}/2$
Effective time of LVDS	t_{eff}	± 360		ps	-

- Notes : 1. All Input levels of LVDS signals are based on the EIA 644 Standard.
 2. If t_{RF} isn't enough, t_{eff} should be meet the range.

APPENDIX- VI-2

■ **LVDS Select : “L” Data-Mapping (VESA format)**

APPENDIX- VIII-1

Mega DCR using condition(1)

- After Inverter ON signal, PWM Duty 100% should be sustained during 2sec.
- It is recommended not to sustain more than 10 min for Deep Dimming (Inverter output Low Duty 0%~20%).

The deep dimming must be used very carefully due to limitation of lamp characteristics and specification.

- 1) For stable lamp on, its duty condition should follow below the condition.
After Inverter ON signal, T0 duration should be sustained.

- 2) Low duty(0%~20%) of **the inverter output current**, B/L may not satisfy some of LCM specification.
- Duration : the low duty operation(0 ~ 20%) must be limited within 10 minutes for one time operation.
 - Ratio : the period of the low duty operation must be less than 1/5 compare to that of the high duty operation(20~Max duty%) in a certain period to prevent unwanted operation.
 - FOS : partial darkness or darkness of center area during the low duty might be happened due to insufficient lamp current.
 - Warm up : the low duty must be used 3 min after the lamps "ON". In case of low temperature, more warm up time may be needed.

APPENDIX- VIII-2

Mega DCR using condition(2)

Parameter	Value			Unit	Note
	Min	Typ	Max		
T1	3	-	-	min	inverter output High Duty[20%~Max Duty%]
T2	-	-	10	min	Inverter output Low Duty[0~20%]
T3	T2 x 5	-	-	min	inverter output High Duty[20% ~ Max Duty%]

- 3) The output current duty may not be same as input PWM duty due to rise/fall time of output.
- 4) Following the recommended conditions as aforementioned, there is no difference of lamp lifetime between conventional method and new one.
