1 Before Repairs

1. Turn off the power supply. Using a 10Ω , 10 W resistor, connect both ends of power supply capacitors (C701, C703 and C702, C704) in order to discharge the voltage.
2. Before turning the power supply on, after completion of repair, slowly apply the primary voltage by using a power supply voltage controller to make sure that the consumed current at 50 Hz in NO SIGNAL mode should be shown below with respect to supply voltage 240 V.

Power supply voltage	AC 240 V
Consumed current 50 Hz	100 - 350 mA

2 Protection Circuitry

The protection circuitry may have operated if either of the following conditions is noticed:

- No sound is heard when the power is switched ON.
- Sound stops during a performance.

The functions of this circuitry is to prevent circuitry damage if, for example, the positive and negative speaker connection wires are shorted, or if speaker systems with an impedance less than the indicated rated impedance of this unit are used.

If this occurs, follow the procedures outlined below.

1. Switch OFF the power.
2. Determine the cause of the problem and correct it.
3. Switch ON the power once again.

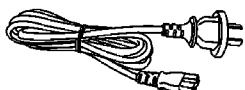

Note:

When the protection circuitry functions, the unit will not operate unless the power is first switched OFF and then ON again.

5 Operation Checks and Component Replacement Procedures

Note:

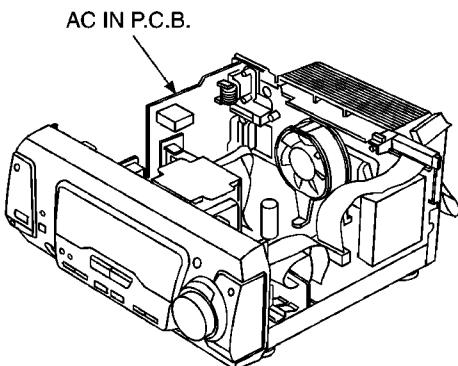

Although this unit has the microphone P.C.B., this section does not describe procedures about it.

- This section describes procedures for checking the operation of the major printed circuit boards and replacing the main components.
- For reassembly after operation checks or replacement, reverse the respective procedures. Special reassembly procedures are described only when required.

5.1. Checking for the AC IN P.C.B.

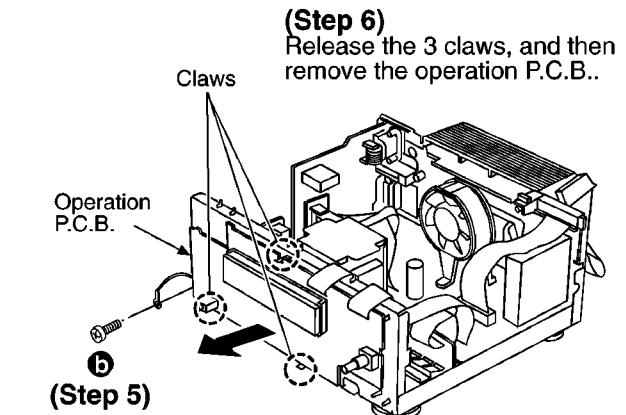

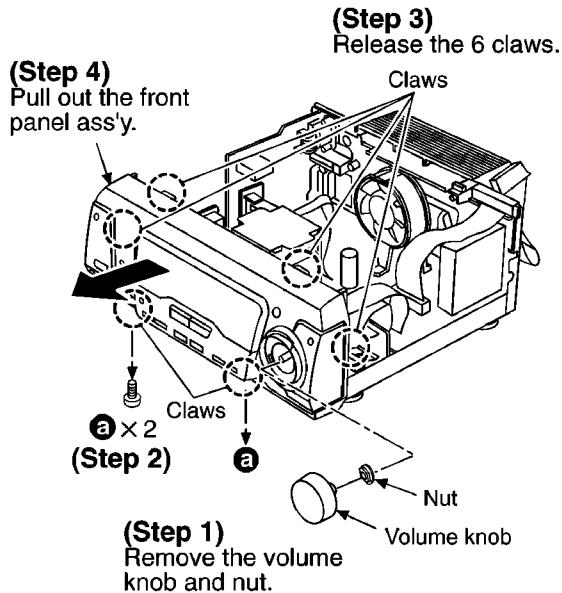

- Check the AC IN P.C.B. as shown below.

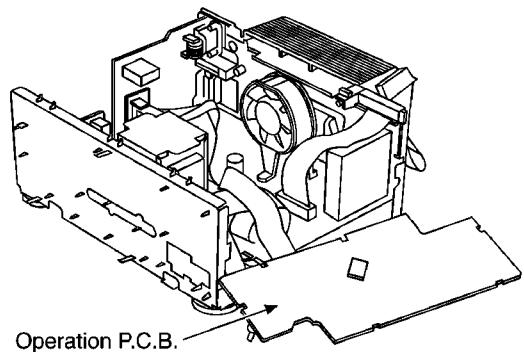

5.2. Checking for the operation P.C.B.

- Follow the (Step 1) - (Step 3) of item 5.1.

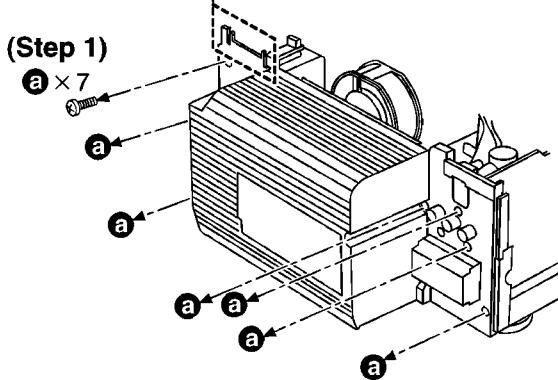

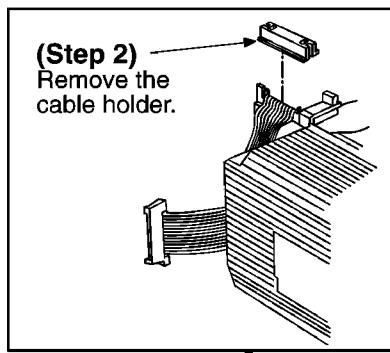

- Check the operation P.C.B. as shown below.

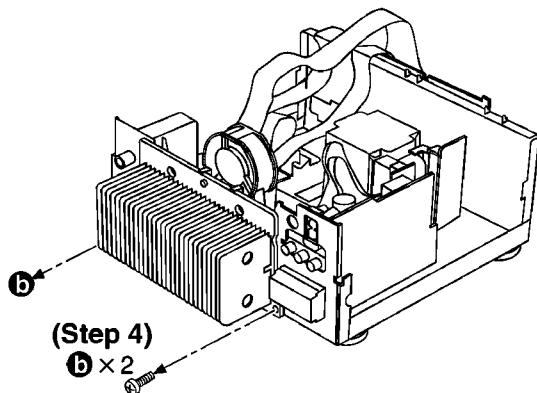

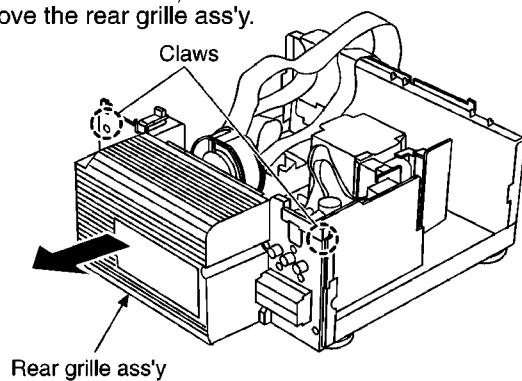

5.3. Checking for the main P.C.B.

- Follow the (Step 1) - (Step 3) of item 5.1.
- Follow the (Step 1) - (Step 6) of item 5.2.

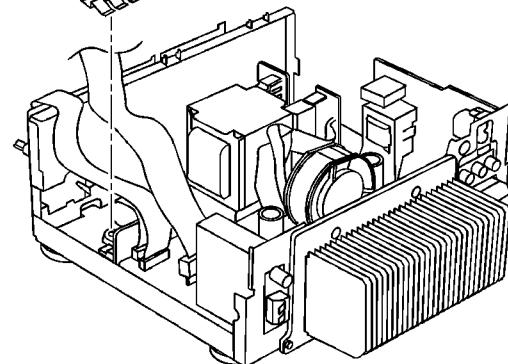

(Step 3)
Release the 2 claws, and then remove the rear grille ass'y.

(Step 5)

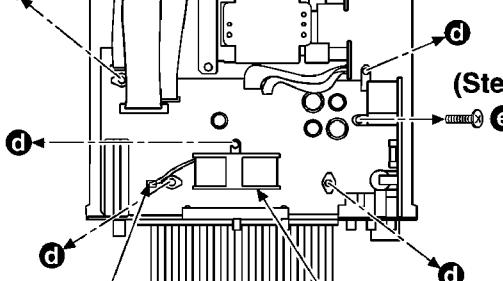

(Step 6)
Remove the transistor holder.

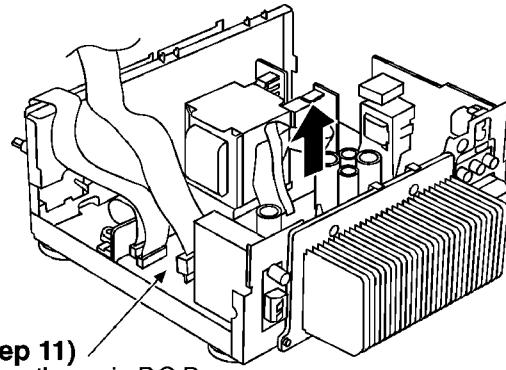

(Step 7)

d $\times 5$

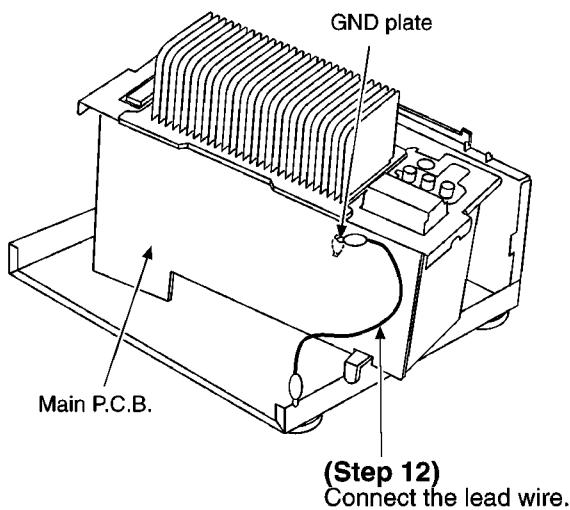

(Step 9)
Remove the connector.

(Step 10)
Remove the fan unit.

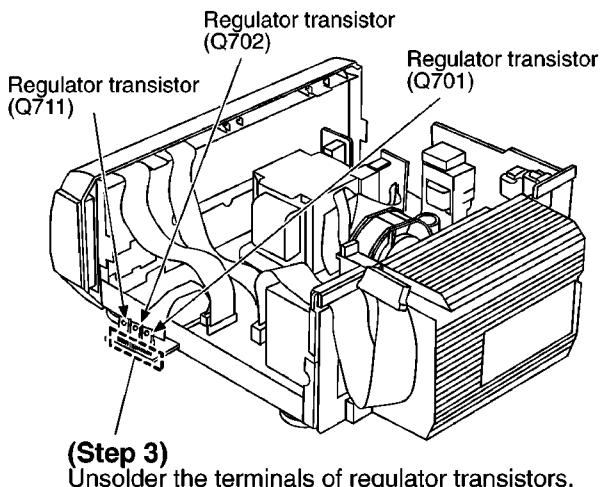

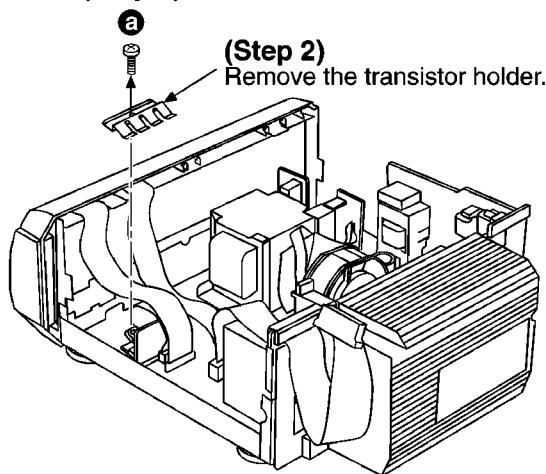

- Check the main P.C.B. as shown below.

5.4. Replacement for the regulator transistor

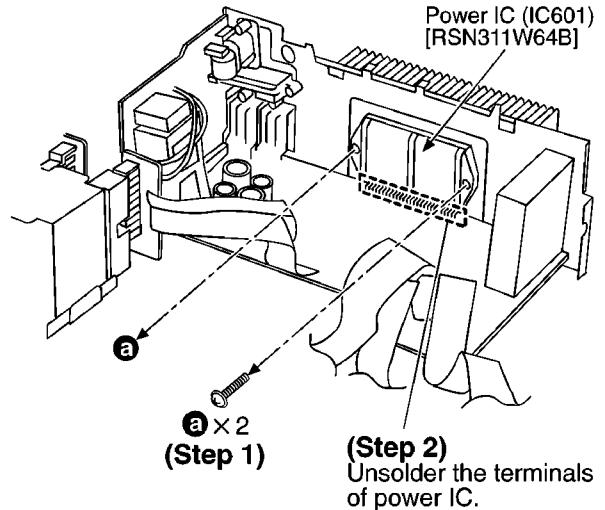

- Follow the (Step 1) - (Step 3) of item 5.1.

(Step 1)

5.5. Replacement for the power IC

- Follow the (Step 1) - (Step 3) of item 5.1.
- Follow the (Step 1) - (Step 6) of item 5.2.
- Follow the (Step 1) - (Step 11) of item 5.3.

NOTE:

When mounting the power IC apply silicone compound (RFKX0002) to the rear side of power IC.

6 To Supply Power Source

This unit is designed to operate on power supplied from system connected.
For system connection, refer to Fig. 6-1.

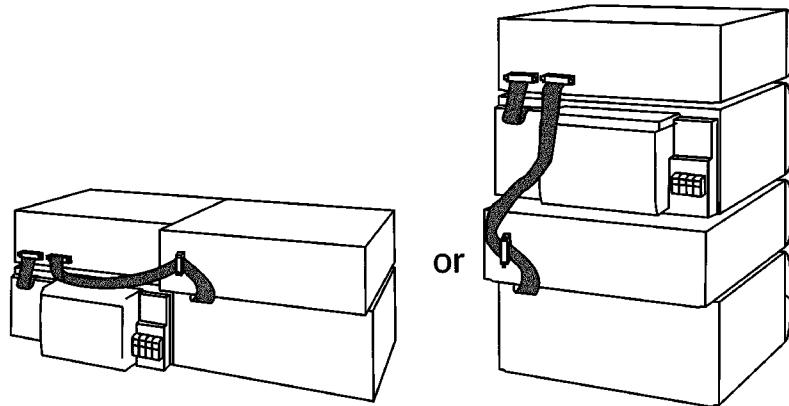

Fig. 6-1.

When the unit has to test and service alone, use the following method to supply power source.

1. Short the section between **W902A Pin 3** and **C740 (-) (GND)**. (Refer to Fig. 6-2.)
2. Connect this unit to an AC mains lead.
(This unit come to stand-by mode.)
3. Turn the unit ON.

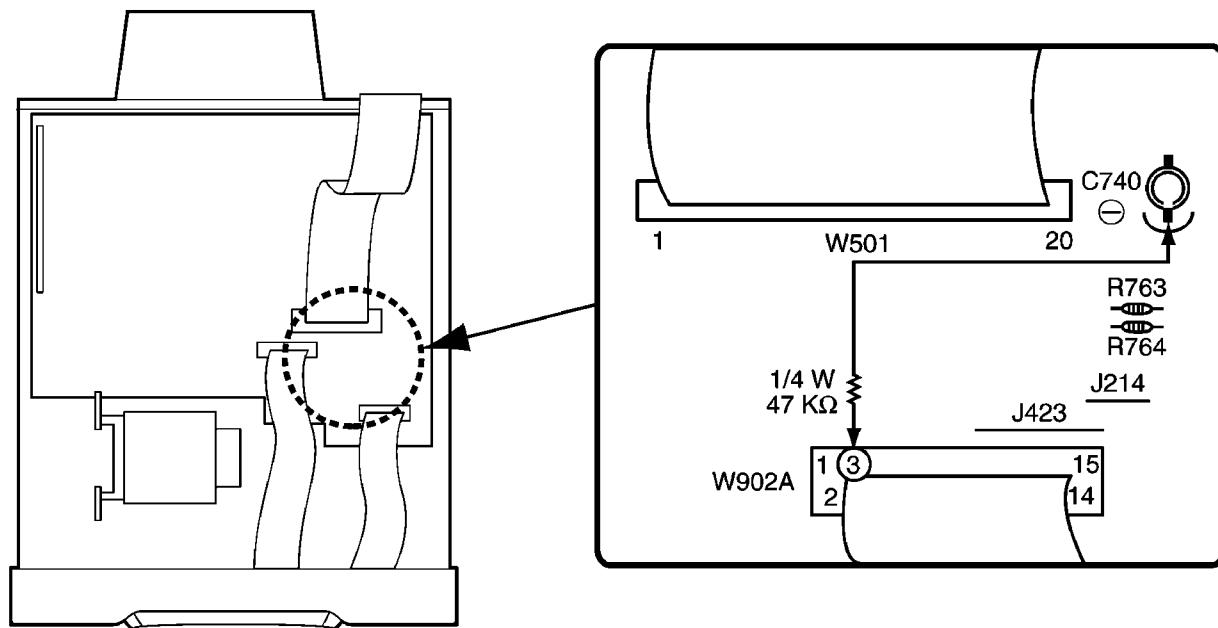

Fig. 6-2.

Notes:

Use only this method when checking the voltage etc..
In case of checking the operations, use the system connections to supply power source.

7 Self-Diagnostic Function

This unit is equipped with a self-diagnostic function which, in the event of a malfunction, automatically displays a code indicating the nature of the malfunction.

Use this self-diagnostic function when servicing the unit.

7.1. To display the malfunction code

- | | |
|--------------------------|---|
| U70 CD: | Automatically displays on the tuner/amplifier when a malfunction occurs. Refer to Fig. 7-1. |
| U70 DECK: | Automatically displays on the tuner/amplifier when a malfunction occurs. Refer to Fig. 7-1. |
| F61: | Automatically displays on the tuner/amplifier when a malfunction occurs. Refer to Fig. 7-1. |
| CD Changer
(SL-EH780) | Sound Processor
(SH-EH780) |

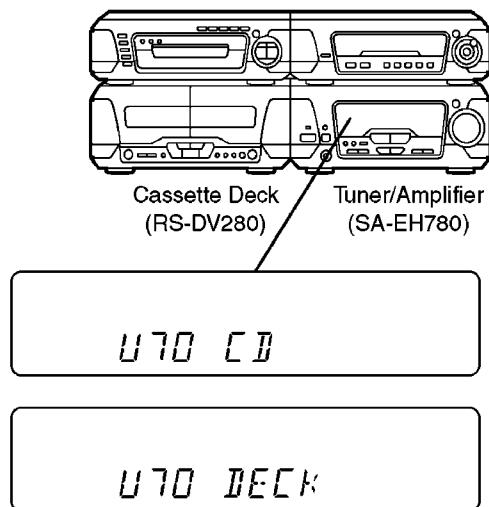

Fig. 7-1.

7.2. To return to the normal display

1. For U70 CD/U70 DECK

- Press an any operation button on the tuner/amplifier.
- To re-display the code, switch the power off (POWER STANDBY button), and then switch power back on again.

2. For F61

- If F61 is displayed, the power will automatically be switched off and the standby indicator will light up.
- F61 will be displayed for 3 seconds, and then the clock will be displayed.
- To re-display the code, switch the power on. F61 will be re-displayed, and then after 3 seconds the clock will be displayed and the power will automatically switch off.

7.3. Display contents

7.3.1. U70 CD/U70 DECK (displayed automatically)

• Problem or condition

A bus-line communications error has occurred as a result of the flat cables being inserted incorrectly, thus preventing the system from operating.

- If U70 is displayed on the tuner/amplifier, the tape deck or CD Changer cannot be operated by remote control.

• Correction Procedure

1. To check for correct insertion of flat cables.

- Insert each connectors until you hear a click.
- Insert the flat cables at the back of the unit in the order indicated. Refer to Fig. 7-2.

Make sure the white side of the cables is on your right side. Refer to Fig. 7-3.

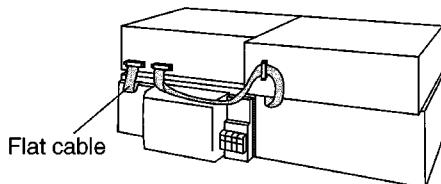

Fig. 7-2.

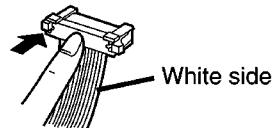

Fig. 7-3.

2. Breakage of flat cables. (Check and replace.)
3. If the problem is not corrected by items 1 and 2 above, this indicates a faulty IC.

SL-EH780:

IC451 (C2BBFD000256)

RS-DV280:

IC701 (M38503M2406F)

Check these ICs and replace.

7.3.2. F61

• Problem or condition

When the power switch is switched on, it automatically switches back off, making it impossible to switch power on.

• Correction procedure

Faulty Tuner/Amplifier (SA-EH780) output IC (IC601). (When a DC voltage is applied to speaker terminals.)

- Indicated voltage values are the standard values for the unit measured by the DC electronic circuit tester (high-impedance) with the chassis taken as standard. Therefore, there may exist some errors in the voltage values, depending on the internal impedance of the DC circuit tester.

No mark : Power ON (FM or AM)

• Important safety notice:

Components identified by △ mark have special characteristics important for safety.

Furthermore, special parts which have purposes of fire-retardant (resistors), high-quality sound (capacitors), low-noise (resistors), etc. are used.

When replacing any of components, be sure to use only manufacturer's specified parts shown in the parts list.

- The supply part number is described alone in the replacement parts list.

Caution!

IC and LSI are sensitive to static electricity.

Secondary trouble can be prevented by taking care during repair.

Cover the parts boxes made of plastics with aluminum foil.

Ground the soldering iron.

Put a conductive mat on the work table.

Do not touch the legs of IC or LSI with the fingers directly.
