LOCATION OF CONTROLS

PROTECTION CIRCUITRY

The protection circuitry may have operated if either of the following conditions is noticed:

- No sound is heard when the power is switched ON.
 - Sound stops during a performance.
- The function of this circuitry is to prevent circuitry damage if, for example, the positive and negative speaker connection wires are "shorted", or if speaker systems with an impedance less than the indicated rated impedance of this unit are used. If this occurs, follow the procedure outlined below:

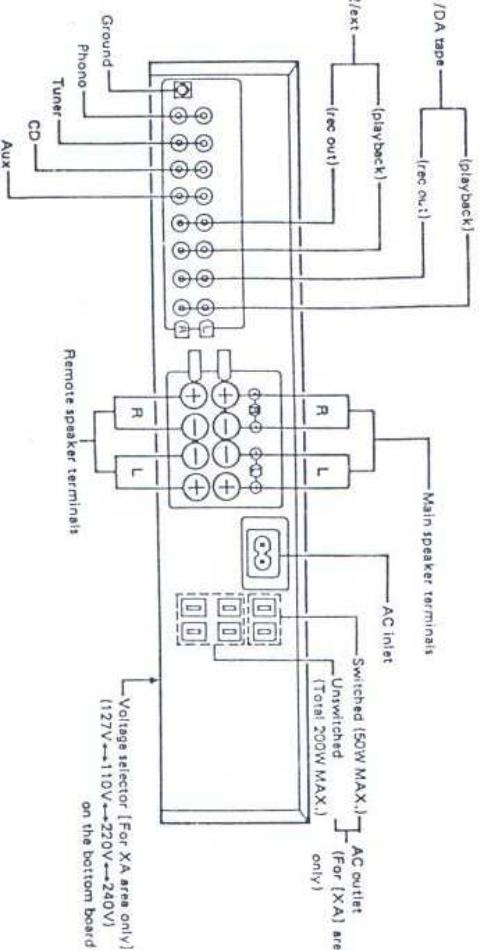

1. Switch OFF the power.
2. Determine the cause of the problem and correct it.
3. Switch ON the power once again.

Note:
When the protection circuitry functions, the unit will not operate unless the power is first switched OFF and then ON again.

BEFORE REPAIR AND ADJUSTMENT

- (1) Turn off the power supply. Using a 10Ω , 5W resistor, shortcircuit both ends of power supply capacitors (C503, C504, $5800\mu F$) in order to discharge the voltage.
- (2) Before turning the power supply on, after completion of repair, slowly apply the primary voltage by using a power supply voltage controller to make sure that the consumed current at 50/60 Hz in NO SIGNAL mode should be shown below with respect to supply voltage 110V/127V/220V/240V.

Power supply voltage	AC110V	AC127V	AC220V	AC240V
Consumed current	50/60Hz	260 ~ 380mA	230 ~ 350mA	110 ~ 230mA

[127V \leftrightarrow 110V \leftrightarrow 220V \leftrightarrow 240V]

on the bottom board

- The power supply for this unit varies depending upon the areas. Also, the parts used for power supply are different. So, refer to the circuit diagram and replacement parts list.
- [XA] area is provided with voltage selector and AC outlets.
- 240V (50/60Hz) for Australia and United Kingdom.
- 220V (50/60Hz) for Continental Europe.
- 110V/127V/220V/240V (50/60Hz) for other [XA] area.
- Phone input capacitance is about 100pF.

Suggestions

- If noise is very annoying while listening to an FM or AM broadcast, switch OFF the video disc player, compact-disc player and turntable.
- Switch OFF the video disc player power if noise is excessive while listening to an audio tape, compact disc or regular phone disc.

- Notes:**
- To record sounds from a compact disc, press the input selector marked "CD". The compact-disc-direct switch is for listening only; it cannot be used to select the compact disc as a recording source.
 - Do not press the left tape-monitor selector to the "tape 1/DA tape" position while two tape decks are being used for recording or while tape deck 2 is being used for recording. This will cause interruptions in the sound and change the recorded signal.
