FUNCTION DESCRIPTION

COMMANDS

A command is the first byte (b0 to b7) inputted to TT1628/TT1668 via the DIO Pin after STB Pin has changed from HIGH to LOW State. If for some reason the STB Pin is set to HIGH while data or commands are being transmitted, the serial communication is initialized, and the data/commands being transmitted are considered invalid.

B7	B6	COMMANDS
0	0	DISPLAY MODE SETTING COMMANDS
0	1	DATA SETTING COMMANDS
1	0	DISPLAY CONTROL COMMANDS
1	1	ADDRESS SETTING COMMANDS

1: DISPLAY MODE SETTING COMMANDS

TT1628/TT1668 provides four display mode settings as shown in the diagram below: As stated earlier a command is the first one byte (b0 to b7) transmitted to TT1628/TT1668 via the DIO Pin when STB is LOW. However, for these commands, the bit 3 to bit 6 (b2 to b5) are ignored, bit 7 & bit 8 (b6 to b7) are given a value of 0. The Display Mode Setting Commands determine the number of segments and grids to be used (10 to 13 segments, 7 to 4 grids). A display commands ON must be executed in order to resume display. If the same mode setting is selected, no command execution is take place, therefore, nothing happens.

When Power is turned ON, the 7-grid, 10-segment modes is selected.

MSB				LSB				
B7	B6	B5	B4	B3	B2	B1	B0	DISPLAY MODE
0	0	--	--	--	--	0	0	4 digits, 13 segments
0	0	--	--	--	--	0	1	5 digits, 12 segments
0	0	--	--	--	--	1	0	6 digits, 11 segments
0	0	--	--	--	--	1	1	7 digits, 10 segments

2: DATA SETTING COMMANDS

The Data Setting Commands executes the Data Write or Data Read Modes for TT1628/TT1668. The data Setting Command, the bits 5 and 6 (b4, b5) are ignored, bit 7 (b6) is given the value of 1 while bit 8 (b7) is given the value of 0.

Please refer to the diagram below.

When power is turned ON, bit 4 to bit 1 (b3 to b0) are given the value of 0.

MSB				LSB

B1:B0 : Data write & read mode settings:

- 0 0 : Write data to display mode
- 1 0 : Read key data

B2 : Data write & read mode settings:

- 0 : Increment address after data has been written

TT1628/TT1668 KEY MATRIX & KEY INPUT DATA STORAGE RAM

TT1628/TT1668 Key Matrix consists of 10 x 2 array as shown below:

Each data entered by each key is stored as follows and read by a READ Command, starting from the last significant bit. When the most significant bit of the data (b7) has been read, the least significant bit of the next data (b0) is read.

K1~~~~~K2		K1~~~~~K2	
SEG1/KS1		SEG2/KS2	X

3: ADDRESS SETTING COMMANDS

Address Setting Commands are used to set the address of the display memory. The address is considered valid if it has a value of 00_H to 0D_H. If the address is set to 0E_H or higher, the data is ignored until a valid address is set. When power is turned ON, the address is set at 00_H.

Please refer to the diagram below.

SCANNING AND DISPLAY TIMING

SERIAL COMMUNICATION FORMAT

The following diagram shows the TT1628/TT1668 serial communication format. The DIO Pin is an N-channel, open-drain output pin; therefore, it is highly recommended that an external pull-up resistor (1K Ω to 10K Ω) must be connected to DIO.

RECEPTION (DATA/COMMAND WRITE)

TRANSMISSION (DATA READ)

Where: t_{wait} (waiting time) $\geq 1\mu s$

It must be noted that when the data is read, the waiting time (t_{wait}) between the rise of the eighth clock that has set the command and the falling of the first clock that has read the data is greater or equal to 1 μs .

APPLICATIONS

Display memory is updated by incrementing addresses. Please refer to the following diagram.

Where:

Command 1: Display mode setting command

Command 2: Data setting command

Command 3: Address setting command

Data 1 to n: Transfer display data (14 bytes max.)

Command 4: Display control command

The following diagram shows the waveforms when updating specific addresses.

Where:

Command 2: Data setting command

Command 3: Address setting command

Data: Data display data

RECOMMENDED SOFTWARE FLOWCHART

1. Command 1: Display Mode Commands
2. Command 2: Data Setting Commands
3. Command 3: Address Setting Commands
4. Command 4: Display Control Commands
5. When IC power is applied for the first time, the content of the Display RAM is not defined;
Thus, it is strongly suggested that the contents of the Display RAM be cleared during the initial setting.
