# LCD TV **SERVICE MANUAL**

**CHASSIS : LJ01B**

**MODEL : 32LD420      32LD420-SA**

## **CAUTION**

BEFORE SERVICING THE CHASSIS,  
READ THE SAFETY PRECAUTIONS IN THIS MANUAL.

P/NO : MFL62886916 (1007-REV00)

Printed in Korea

# SAFETY PRECAUTIONS

## IMPORTANT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special safety-related characteristics. These parts are identified by  $\triangle$  in the Schematic Diagram and Exploded View.

It is essential that these special safety parts should be replaced with the same components as recommended in this manual to prevent Shock, Fire, or other Hazards.

Do not modify the original design without permission of manufacturer.

### General Guidance

An **isolation Transformer** should always be used during the servicing of a receiver whose chassis is not isolated from the AC power line. Use a transformer of adequate power rating as this protects the technician from accidents resulting in personal injury from electrical shocks.

It will also protect the receiver and its components from being damaged by accidental shorts of the circuitry that may be inadvertently introduced during the service operation.

If any fuse (or Fusible Resistor) in this TV receiver is blown, replace it with the specified.

When replacing a high wattage resistor (Oxide Metal Film Resistor, over 1 W), keep the resistor 10 mm away from PCB.

Keep wires away from high voltage or high temperature parts.

### Before returning the receiver to the customer,

always perform an **AC leakage current check** on the exposed metallic parts of the cabinet, such as antennas, terminals, etc., to be sure the set is safe to operate without damage of electrical shock.

### Leakage Current Cold Check(Antenna Cold Check)

With the instrument AC plug removed from AC source, connect an electrical jumper across the two AC plug prongs. Place the AC switch in the on position, connect one lead of ohm-meter to the AC plug prongs tied together and touch other ohm-meter lead in turn to each exposed metallic parts such as antenna terminals, phone jacks, etc.

If the exposed metallic part has a return path to the chassis, the measured resistance should be between  $1\text{ M}\Omega$  and  $5.2\text{ M}\Omega$ .

When the exposed metal has no return path to the chassis the reading must be infinite.

An other abnormality exists that must be corrected before the receiver is returned to the customer.

### Leakage Current Hot Check (See below Figure)

Plug the AC cord directly into the AC outlet.

#### **Do not use a line Isolation Transformer during this check.**

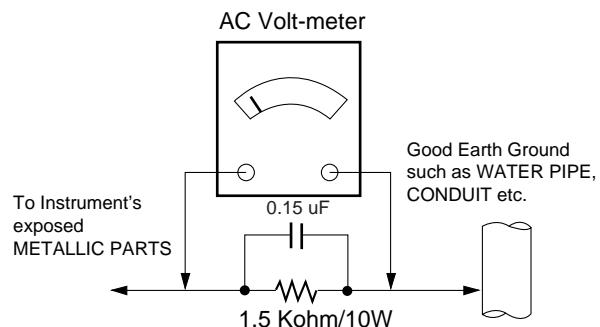

Connect 1.5 K / 10 watt resistor in parallel with a 0.15 uF capacitor between a known good earth ground (Water Pipe, Conduit, etc.) and the exposed metallic parts.

Measure the AC voltage across the resistor using AC voltmeter with 1000 ohms/volt or more sensitivity.

Reverse plug the AC cord into the AC outlet and repeat AC voltage measurements for each exposed metallic part. Any voltage measured must not exceed 0.75 volt RMS which corresponds to 0.5 mA.

In case any measurement is out of the limits specified, there is possibility of shock hazard and the set must be checked and repaired before it is returned to the customer.

### Leakage Current Hot Check circuit

When 25A is impressed between Earth and 2nd Ground for 1 second, Resistance must be less than  $0.1\text{ }\Omega$

\*Base on Adjustment standard

# SERVICING PRECAUTIONS

**CAUTION:** Before servicing receivers covered by this service manual and its supplements and addenda, read and follow the *SAFETY PRECAUTIONS* on page 3 of this publication.

**NOTE:** If unforeseen circumstances create conflict between the following servicing precautions and any of the safety precautions on page 3 of this publication, always follow the safety precautions.

Remember: Safety First.

## General Servicing Precautions

1. Always unplug the receiver AC power cord from the AC power source before:
  - a. Removing or reinstalling any component, circuit board module or any other receiver assembly.
  - b. Disconnecting or reconnecting any receiver electrical plug or other electrical connection.
  - c. Connecting a test substitute in parallel with an electrolytic capacitor in the receiver.
- CAUTION:** A wrong part substitution or incorrect polarity installation of electrolytic capacitors may result in an explosion hazard.
2. Test high voltage only by measuring it with an appropriate high voltage meter or other voltage measuring device (DVM, FETVOM, etc) equipped with a suitable high voltage probe.  
Do not test high voltage by "drawing an arc".
3. Do not spray chemicals on or near this receiver or any of its assemblies.
4. Unless specified otherwise in this service manual, clean electrical contacts only by applying the following mixture to the contacts with a pipe cleaner, cotton-tipped stick or comparable non-abrasive applicator; 10 % (by volume) Acetone and 90 % (by volume) isopropyl alcohol (90 % - 99 % strength)  
**CAUTION:** This is a flammable mixture.  
Unless specified otherwise in this service manual, lubrication of contacts is not required.
5. Do not defeat any plug/socket B+ voltage interlocks with which receivers covered by this service manual might be equipped.
6. Do not apply AC power to this instrument and/or any of its electrical assemblies unless all solid-state device heat sinks are correctly installed.
7. Always connect the test receiver ground lead to the receiver chassis ground before connecting the test receiver positive lead.  
Always remove the test receiver ground lead last.
8. *Use with this receiver only the test fixtures specified in this service manual.*  
**CAUTION:** Do not connect the test fixture ground strap to any heat sink in this receiver.

## Electrostatically Sensitive (ES) Devices

Some semiconductor (solid-state) devices can be damaged easily by static electricity. Such components commonly are called *Electrostatically Sensitive (ES) Devices*. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by static by static electricity.

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed to prevent potential shock reasons prior to applying power to the unit under test.

2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an anti-static type solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.
- CAUTION:** Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.
8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES device.)

## General Soldering Guidelines

1. Use a grounded-tip, low-wattage soldering iron and appropriate tip size and shape that will maintain tip temperature within the range of 500 °F to 600 °F.
2. Use an appropriate gauge of RMA resin-core solder composed of 60 parts tin/40 parts lead.
3. Keep the soldering iron tip clean and well tinned.
4. Thoroughly clean the surfaces to be soldered. Use a small wire-bristle (0.5 inch, or 1.25 cm) brush with a metal handle.  
Do not use freon-propelled spray-on cleaners.
5. Use the following unsoldering technique
  - a. Allow the soldering iron tip to reach normal temperature. (500 °F to 600 °F)
  - b. Heat the component lead until the solder melts.
  - c. Quickly draw the melted solder with an anti-static, suction-type solder removal device or with solder braid.  
**CAUTION:** Work quickly to avoid overheating the circuit board printed foil.
6. Use the following soldering technique.
  - a. Allow the soldering iron tip to reach a normal temperature (500 °F to 600 °F)
  - b. First, hold the soldering iron tip and solder the strand against the component lead until the solder melts.
  - c. Quickly move the soldering iron tip to the junction of the component lead and the printed circuit foil, and hold it there only until the solder flows onto and around both the component lead and the foil.  
**CAUTION:** Work quickly to avoid overheating the circuit board printed foil.
  - d. Closely inspect the solder area and remove any excess or splashed solder with a small wire-bristle brush.

## **IC Remove/Replacement**

Some chassis circuit boards have slotted holes (oblong) through which the IC leads are inserted and then bent flat against the circuit foil. When holes are the slotted type, the following technique should be used to remove and replace the IC. When working with boards using the familiar round hole, use the standard technique as outlined in paragraphs 5 and 6 above.

### **Removal**

1. Desolder and straighten each IC lead in one operation by gently prying up on the lead with the soldering iron tip as the solder melts.
2. Draw away the melted solder with an anti-static suction-type solder removal device (or with solder braid) before removing the IC.

### **Replacement**

1. Carefully insert the replacement IC in the circuit board.
2. Carefully bend each IC lead against the circuit foil pad and solder it.
3. Clean the soldered areas with a small wire-bristle brush.  
(It is not necessary to reapply acrylic coating to the areas).

## **"Small-Signal" Discrete Transistor**

### **Removal/Replacement**

1. Remove the defective transistor by clipping its leads as close as possible to the component body.
2. Bend into a "U" shape the end of each of three leads remaining on the circuit board.
3. Bend into a "U" shape the replacement transistor leads.
4. Connect the replacement transistor leads to the corresponding leads extending from the circuit board and crimp the "U" with long nose pliers to insure metal to metal contact then solder each connection.

## **Power Output, Transistor Device**

### **Removal/Replacement**

1. Heat and remove all solder from around the transistor leads.
2. Remove the heat sink mounting screw (if so equipped).
3. Carefully remove the transistor from the heat sink of the circuit board.
4. Insert new transistor in the circuit board.
5. Solder each transistor lead, and clip off excess lead.
6. Replace heat sink.

### **Diode Removal/Replacement**

1. Remove defective diode by clipping its leads as close as possible to diode body.
2. Bend the two remaining leads perpendicular y to the circuit board.
3. Observing diode polarity, wrap each lead of the new diode around the corresponding lead on the circuit board.
4. Securely crimp each connection and solder it.
5. Inspect (on the circuit board copper side) the solder joints of the two "original" leads. If they are not shiny, reheat them and if necessary, apply additional solder.

## **Fuse and Conventional Resistor**

### **Removal/Replacement**

1. Clip each fuse or resistor lead at top of the circuit board hollow stake.
2. Securely crimp the leads of replacement component around notch at stake top.
3. Solder the connections.

**CAUTION:** Maintain original spacing between the replaced component and adjacent components and the circuit board to prevent excessive component temperatures.

## **Circuit Board Foil Repair**

Excessive heat applied to the copper foil of any printed circuit board will weaken the adhesive that bonds the foil to the circuit board causing the foil to separate from or "lift-off" the board. The following guidelines and procedures should be followed whenever this condition is encountered.

### **At IC Connections**

To repair a defective copper pattern at IC connections use the following procedure to install a jumper wire on the copper pattern side of the circuit board. (Use this technique only on IC connections).

1. Carefully remove the damaged copper pattern with a sharp knife. (Remove only as much copper as absolutely necessary).
2. carefully scratch away the solder resist and acrylic coating (if used) from the end of the remaining copper pattern.
3. Bend a small "U" in one end of a small gauge jumper wire and carefully crimp it around the IC pin. Solder the IC connection.
4. Route the jumper wire along the path of the out-away copper pattern and let it overlap the previously scraped end of the good copper pattern. Solder the overlapped area and clip off any excess jumper wire.

### **At Other Connections**

Use the following technique to repair the defective copper pattern at connections other than IC Pins. This technique involves the installation of a jumper wire on the component side of the circuit board.

1. Remove the defective copper pattern with a sharp knife. Remove at least 1/4 inch of copper, to ensure that a hazardous condition will not exist if the jumper wire opens.
2. Trace along the copper pattern from both sides of the pattern break and locate the nearest component that is directly connected to the affected copper pattern.
3. Connect insulated 20-gauge jumper wire from the lead of the nearest component on one side of the pattern break to the lead of the nearest component on the other side.  
Carefully crimp and solder the connections.

**CAUTION:** Be sure the insulated jumper wire is dressed so the it does not touch components or sharp edges.

# SPECIFICATION

NOTE : Specifications and others are subject to change without notice for improvement.

## 1. Application range

This specification is applied to the LCD TV used LJ01A/B chassis.

## 2. Requirement for Test

Each part is tested as below without special appointment.

- 1) Temperature  
: 25 °C ± 5 °C (77 °F ± 9 °F), CST : 40 °C ± 5 °C
- 2) Relative Humidity : 65 % ± 10 %
- 3) Power Voltage  
: Standard input voltage (AC 100-240 V~ 50 / 60 Hz)  
\* Standard Voltage of each products is marked by models.
- 4) Specification and performance of each parts are followed each drawing and specification by part number in accordance with BOM.
- 5) The receiver must be operated for about 5 minutes prior to the adjustment.

## 3. Test method

- 1) Performance: LGE TV test method followed
- 2) Demanded other specification
  - Safety: CE, IEC specification
  - EMC:CE, IEC

# ADJUSTMENT INSTRUCTION

## 1. Application Range

This specification sheet is applied to all of the LCD TV with LJ01A/LJ01B/LJ01D/LJ01G chassis.

## 2. Designation

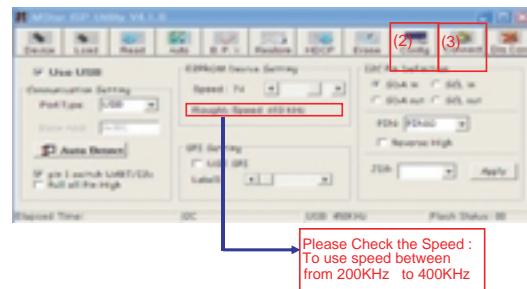

- 1) The adjustment is according to the order which is designated and which must be followed, according to the plan which can be changed only on agreeing.
- 2) Power Adjustment: Free Voltage
- 3) Magnetic Field Condition: Nil.
- 4) Input signal Unit: Product Specification Standard
- 5) Reserve after operation: Above 5 Minutes (Heat Run)  
Temperature : at 25 °C ± 5 °C  
Relative humidity : 65 % ± 10 %  
Input voltage : 100 ~ 220 V, 50/60 Hz
- 6) Adjustment equipments: Color Analyzer(CA-210 or CA-110), DDC Adjustment Jig equipment, Service remote control.
- 7) Push the "IN STOP" key - For memory initialization.

Case1 : Software version up

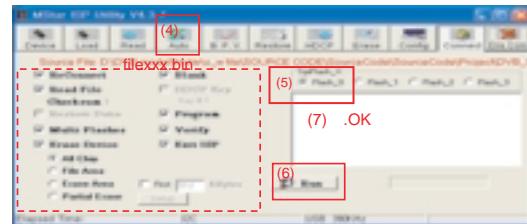

1. After downloading S/W by USB, TV set will reboot automatically
2. Push "In-stop" key
3. Push "Power on" key
4. Function inspection
5. After function inspection, Push "In-stop" key.

Case2 : Function check at the assembly line

1. When TV set is entering on the assembly line, Push "In-stop" key at first.
2. Push "Power on" key for turning it on.  
-> If you push "Power on" key, TV set will recover channel information by itself.
3. After function inspection, Push "In-stop" key.

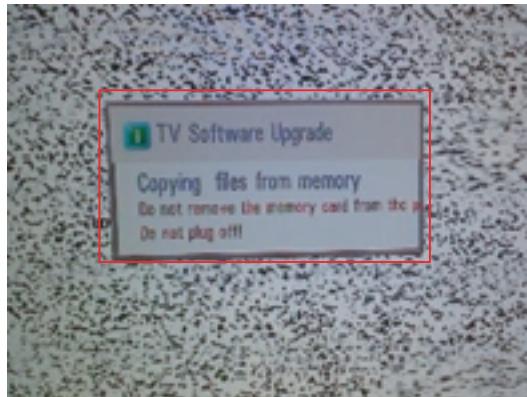

- 5) Click "Auto" tab and set as below
- 6) Click "Run".
- 7) After downloading, check "OK" message.

### \* USB DOWNLOAD

- 1) Put the USB Stick to the USB socket
- 2) Automatically detecting update file in USB Stick
  - If your downloaded program version in USB Stick is Low, it didn't work. But your downloaded version is High, USB data is automatically detecting
- 3) Show the message "Copying files from memory"

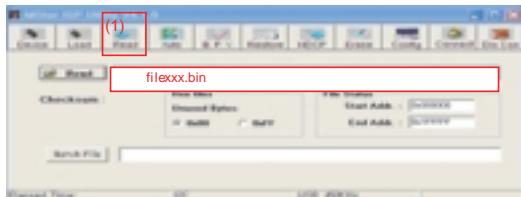

## 3. Main PCB check process

\* APC - After Manual-Insult, executing APC

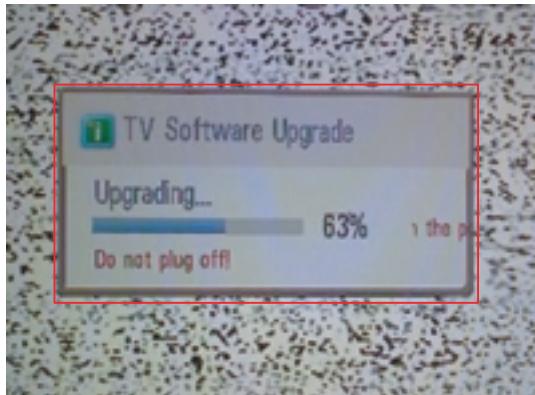

### \* Boot file Download

- 1) Execute ISP program "Mstar ISP Utility" and then click "Config" tab.

- 2) Set as below, and then click "Auto Detect" and check "OK" message  
If "Error" is displayed, Check connection between computer, jig, and set.
- 3) Click "Read" tab, and then load download file (XXXX.bin) by clicking "Read"
- 4) Click "Connect" tab. If "Can't" is displayed, check connection between computer, jig, and set.

4) Updating is staring.

- 5) Uploading completed, The TV will restart automatically.
- 6) If your TV is turned on, check your updated version and Tool option.(explain the Tool option, next stage)
  - \* If downloading version is more high than your TV have, TV can lost all channel data. In this case, you have to channel recover. if all channel data is cleared, you didn't have a DTV/ATV test on production line.

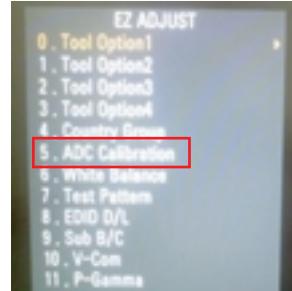

**\* After downloading, have to adjust Tool Option again.**

- 1) Push "IN-START" key in service remote control.
- 2) Select "Tool Option 1" and Push "OK" button.
- 3) Punch in the number. (Each model has their number)
- 4) Completed selecting Tool option.

### 3.1. ADC Process

#### (1) ADC

- Enter Service Mode by pushing "ADJ" key,
- Enter Internal ADC mode by pushing "G" key at "5. ADC Calibration"

<Caution> Using 'power on' button of the Adjustment R/C, power on TV.

\* ADC Calibration Protocol (RS232)

No	Item	CMD1	CMD2	Data0	
Enter Adjust Mode	Adjust 'Mode In'	A	A	0 0	When transfer the 'Mode In', Carry the command.
ADC adjust	ADC Adjust	A	D	1 0	Automatically adjustment (The use of a internal pattern)

Adjust Sequence

- aa 00 00 [Enter Adjust Mode]
  - xb 00 40 [Component1 Input (480i)]
  - ad 00 10 [Adjust 480i Comp1]
  - xb 00 60 [RGB Input (1024\*768)]
  - ad 00 10 [Adjust 1024\*768 RGB]
  - aa 00 90 End Adjust mode
- \* Required equipment : Adjustment R/C.

### 3.2. Function Check

\* Check display and sound

- Check Input and Signal items. (cf. work instructions)

- 1) TV
- 2) AV (SCART1/SCART2/ CVBS)
- 3) COMPONENT (480i)
- 4) RGB (PC : 1024 x 768 @ 60hz)
- 5) HDMI
- 6) PC Audio In

\* Display and Sound check is executed by Remote control.

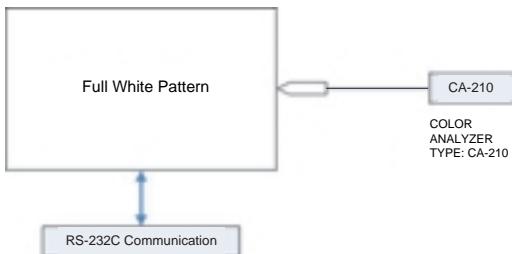

## 4. Total Assembly line process

### 4.1. Adjustment Preparation

- W/B Equipment condition  
CA210 : CH 9, Test signal : Inner pattern (85IRE)
- Above 5 minutes H/run in the inner pattern. ("power on" key of adjust remote control)

Cool	13,000	K	X=0.269( $\pm 0.002$ ) Y=0.273( $\pm 0.002$ )	<Test Signal> Inner pattern (216gray,85IRE)
Medium	9,300	K	X=0.285( $\pm 0.002$ ) Y=0.293( $\pm 0.002$ )	
Warm	6,500	K	X=0.313( $\pm 0.002$ ) Y=0.329( $\pm 0.002$ )	

- Connecting picture of the measuring instrument  
(On Automatic control)  
Inside PATTERN is used when W/B is controlled. Connect to auto controller or push Adjustment R/C POWER ON -> Enter the mode of White-Balance, the pattern will come out.

- Auto-control interface and directions
  - Adjust in the place where the influx of light like floodlight around is blocked. (illumination is less than 10 lux).
  - Adhere closely the Color Analyzer (CA210) to the module less than 10 cm distance, keep it with the surface of the Module and Color Analyzer's prove vertically.(80° ~ 100°).
  - Aging time
    - After aging start, keep the power on (no suspension of power supply) and heat-run over 5 minutes.
    - Using 'no signal' or 'full white pattern' or the others, check the back light on.

- Auto adjustment Map(RS-232C)

RS-232C COMMAND

[CMD ID DATA]

Wb	00	00	White Balance Start
Wb	00	ff	White Balance End

	RS-232C COMMAND			MIN	CENTER			MAX
	[CMD ID DATA]				Cool	Mid	Warm	
R Gain	jg	Ja	jd	00	172	192	192	192
G Gain	jh	Jb	je	00	172	192	192	192
B Gain	ji	Jc	jf	00	192	192	172	192
R Cut					64	64	64	128
G Cut					64	64	64	128
B Cut					64	64	64	128

<Caution>

Color Temperature : COOL, Medium, Warm.  
One of R Gain/G Gain/ B Gain should be kept on 0xC0, and adjust other two lower than C0.  
(when R/G/B Gain are all C0, it is the FULL Dynamic Range of Module)

\* Manual W/B process using adjusts Remote control.

- After enter Service Mode by pushing "ADJ" key,
- Enter White Balance by pushing "G" key at "6. White Balance".

\* After done all adjustments, Press "In-start" button and compare Tool option and Area option value with its BOM, if it is correctly same then unplug the AC cable. If it is not same, then correct it same with BOM and unplug AC cable. For correct it to the model's module from factory Jig model.

\* Push the "IN STOP" key after completing the function inspection. And Mechanical Power Switch must be set "ON".

### 4.2. DDC EDID Write (RGB 128Byte)

- Connect D-sub Signal Cable to D-sub Jack.
- Write EDID Data to EEPROM(24C02) by using DDC2B protocol.
- Check whether written EDID data is correct or not.
- \* For SVC main Assembly, EDID have to be downloaded to Insert Process in advance.

### 4.3. DDC EDID Write (HDMI 256Byte)

- Connect HDMI Signal Cable to HDMI Jack.
- Write EDID Data to EEPROM(24C02) by using DDC2B protocol.
- Check whether written EDID data is correct or not.
- \* For SVC main Assembly, EDID have to be downloaded to Insert Process in advance.

### 4.4. EDID DATA

1) All Data : HEXA Value

2) Changeable Data :

\*: Serial No : Controlled / Data:01

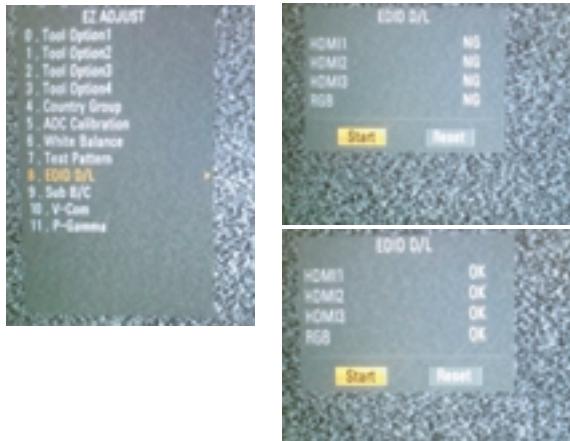

\*\*: Month : Controlled / Data:00

\*\*\*:Year : Controlled

\*\*\*\*:Check sum

## 4.5. Auto Download

- 1) Press Adj. key on the Adj. Remote control.
- 2) Select EDID D/L menu.
- 3) By pressing Enter key, EDID download will begin
- 4) If Download is successful, OK is display, but If Download if failure, NG is displayed.
- 5) If Download is failure, Re-try downloads.

\* Edid data and Model option download (RS232)

NO	Item	CMD1	CMD2	Data0	
Enter download Mode	Download 'Mode In'	A	A	0 0	When transfer the 'Mode In', Carry the command.
EDID data and Model option download	Download	A	E	00 10	Automatically Download (The use of a internal pattern)

## - Manual Download

- \* Caution
  - 1) Use the proper signal cable for EDID Download
    - Analog EDID : Pin3 exists
    - Digital EDID : Pin3 exists
  - 2) Never connect HDMI & D-sub Cable at the same time.
  - 3) Use the proper cables below for EDID Writing
  - 4) Download HDMI1, HDMI2, separately because HDMI1 is different from HDMI2

### - Adjust sequence

- Press the PIP key of the ADJ remote control.(This PIP key is hot key to enter the VCOM adjusting mode)
- (Or After enter Service Mode by pushing "ADJ" key, then Enter V-Com Adjust mode by pushing "G" key at "10. V-Com")
- As pushing the right or the left key on the remote control, and find the V-COM value which is no or minimized the Flicker. (If there is no flicker at default value, Press the exit key and finish the VCOM adjustment.)
- Push the "OK" key to store value. Then the message "Saving OK" is pop.
- Press the exit key to finish VCOM adjustment. (Visual Adjust and control the Voltage level)</li

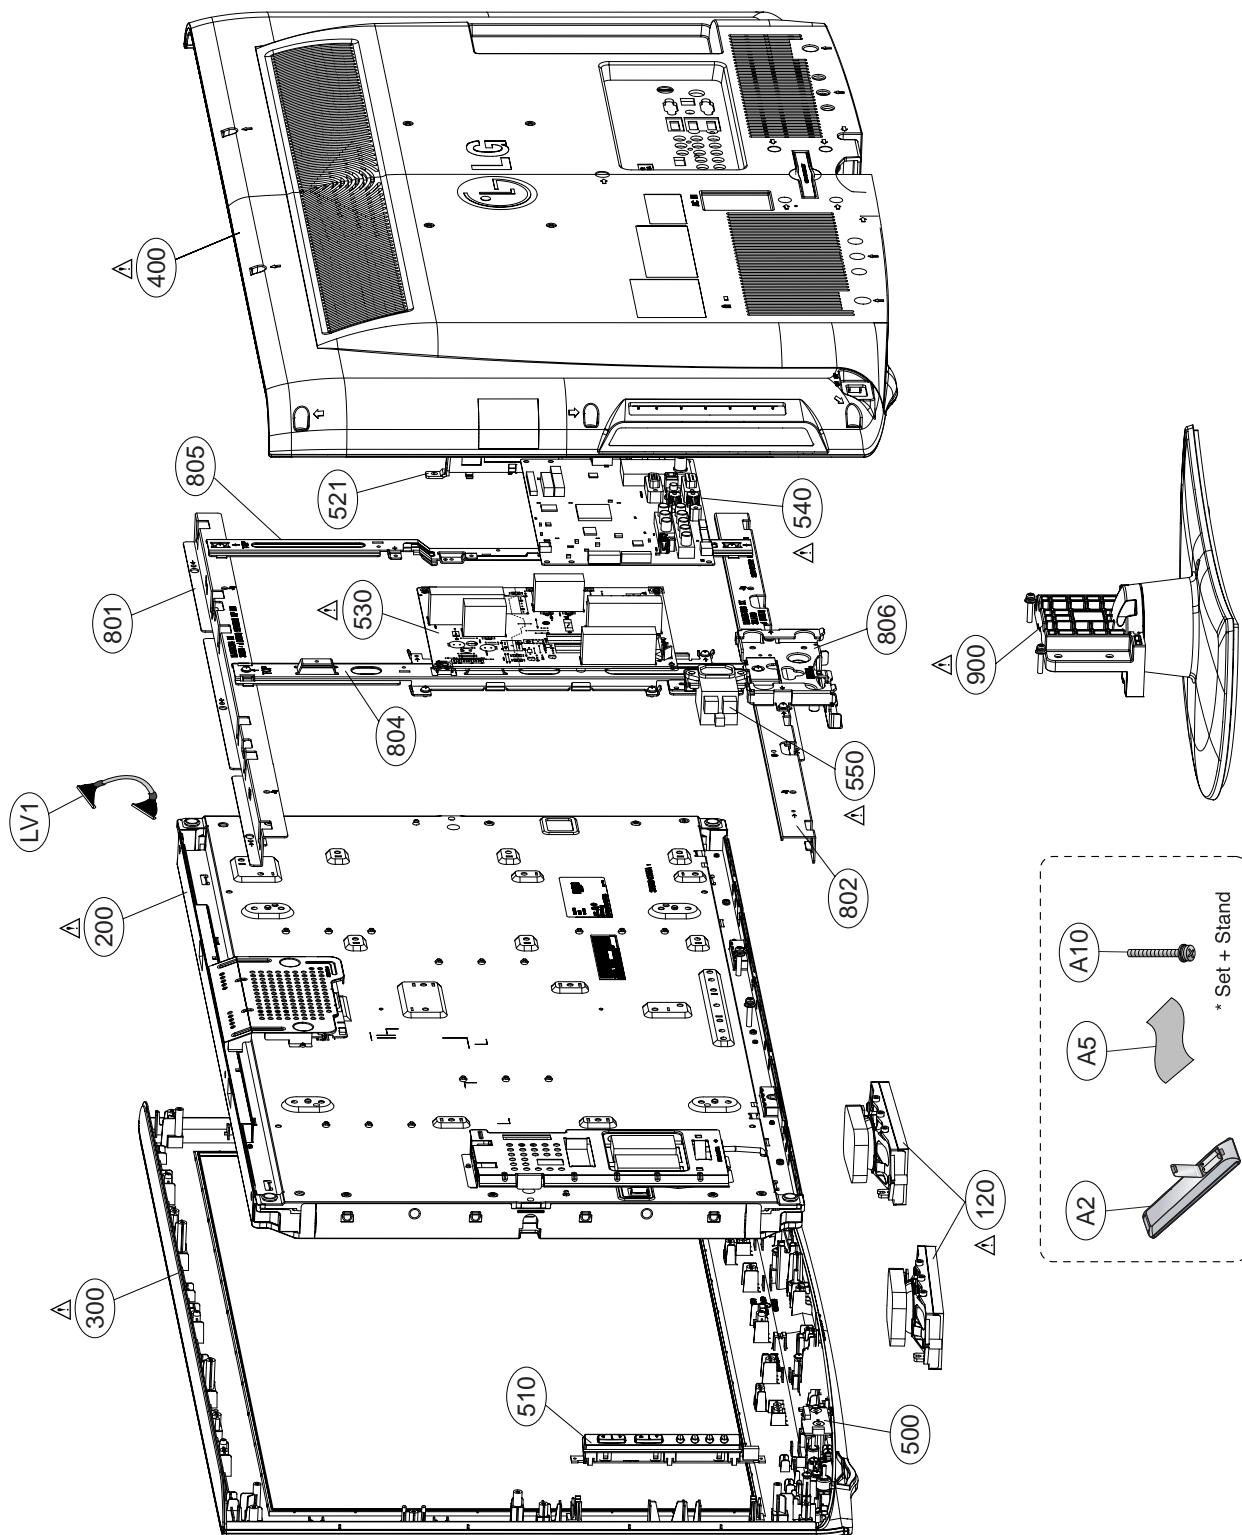

# BLOCK DIAGRAM

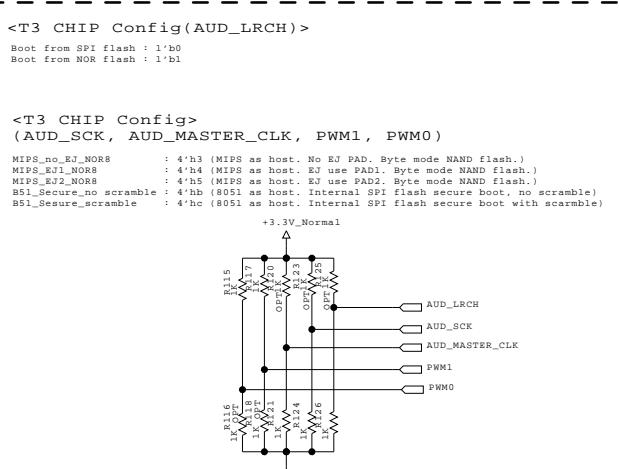

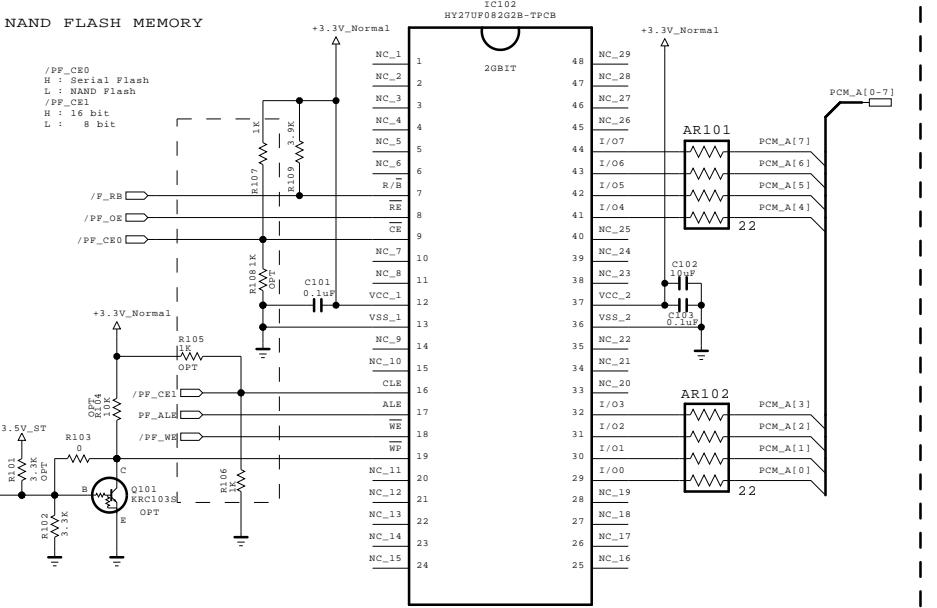

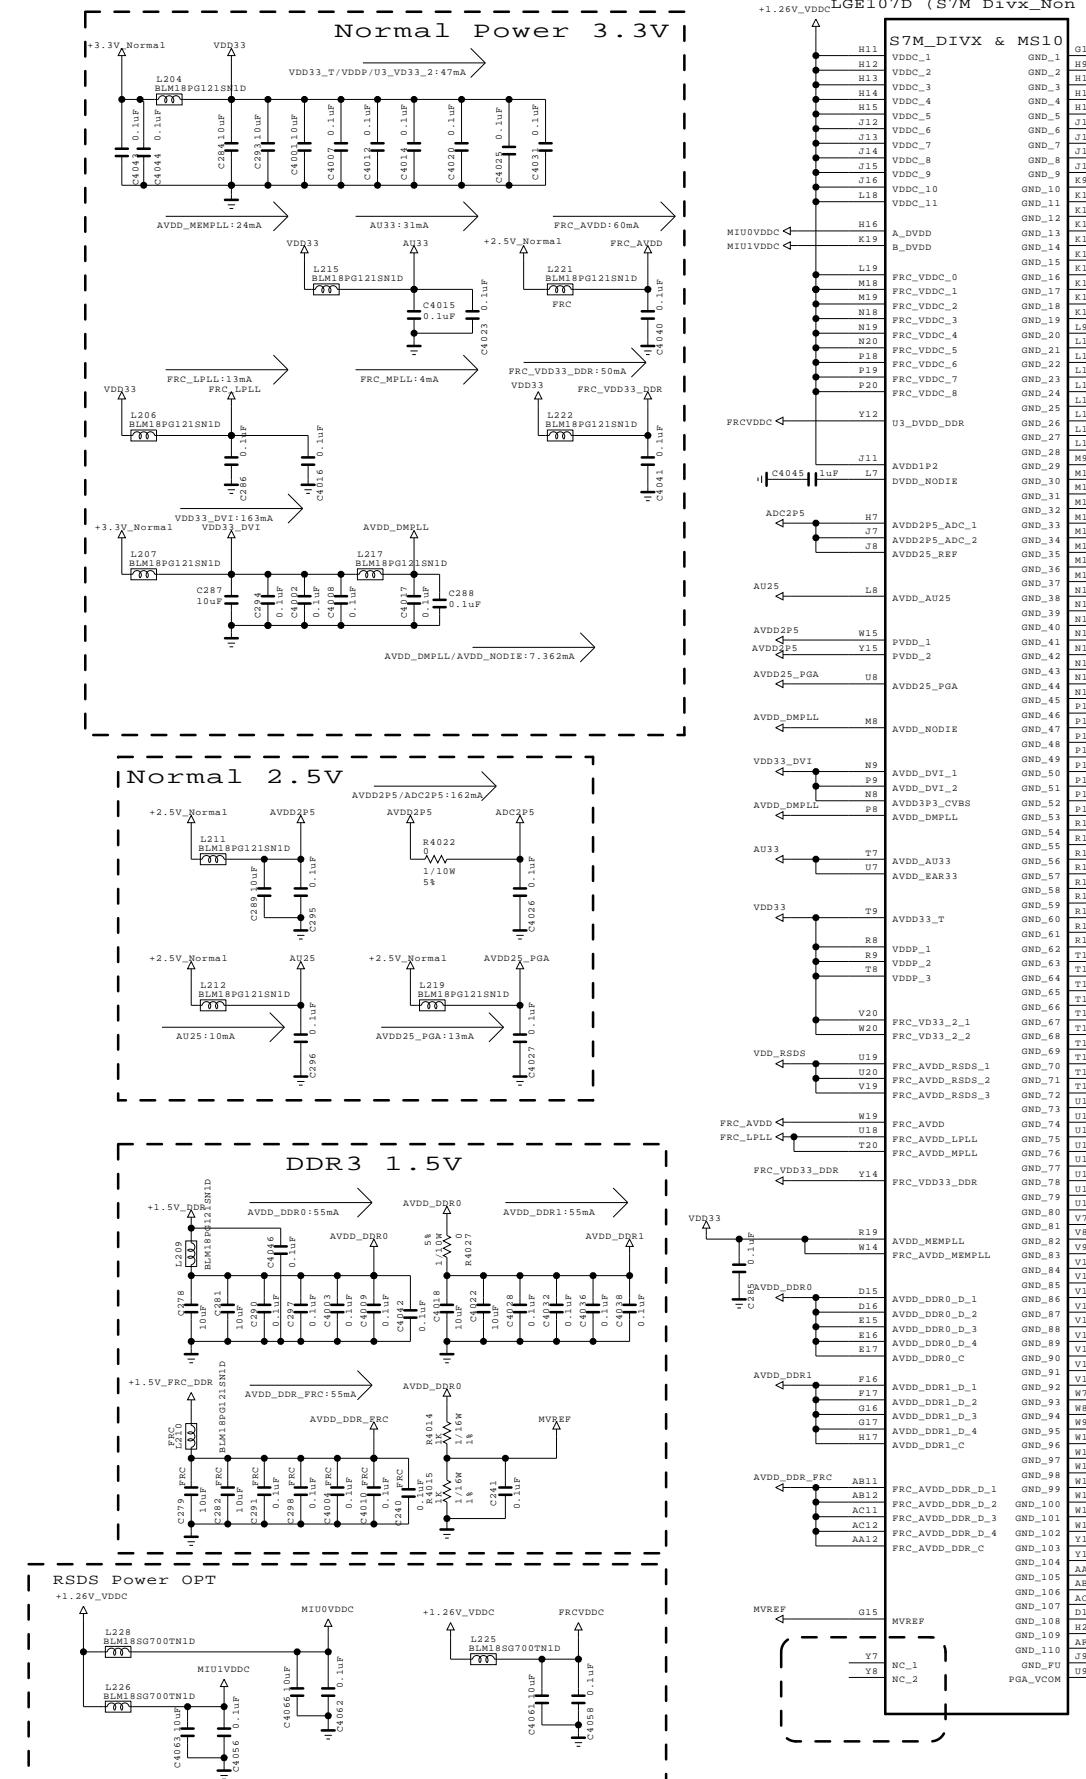

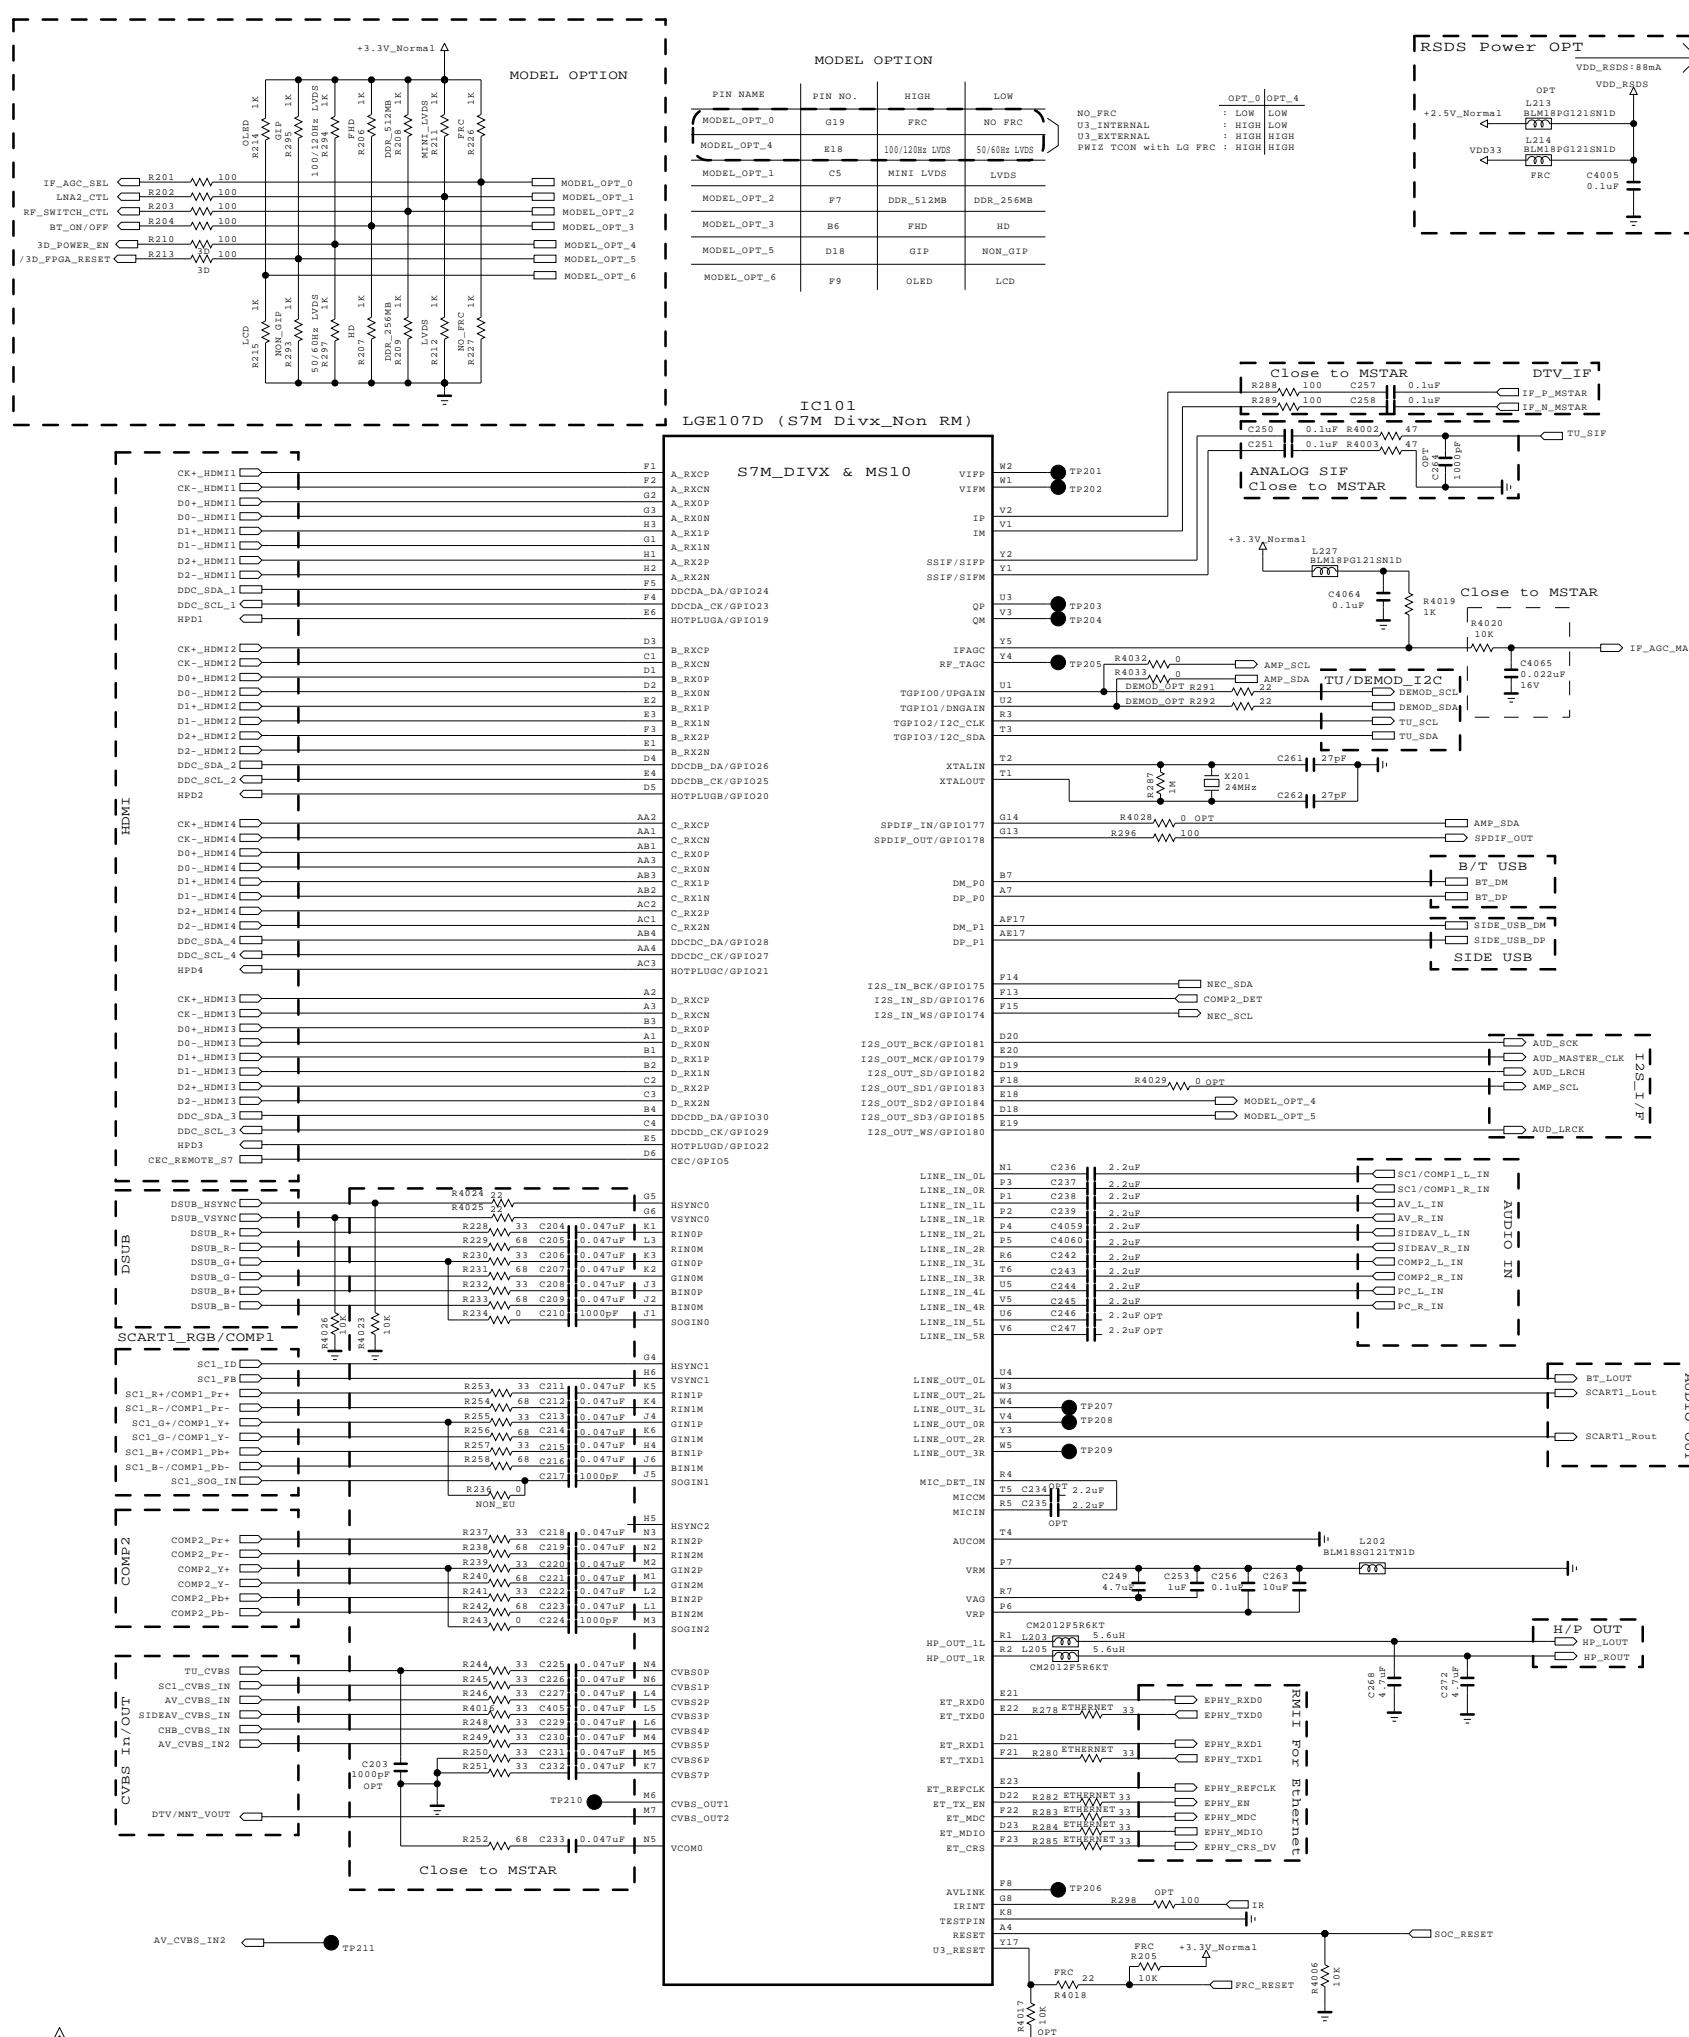

# EXPLODED VIEW

## IMPORTANT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special safety-related characteristics. These parts are identified by  $\triangle$  in the Schematic Diagram and EXPLODED VIEW.  
It is essential that these special safety parts should be replaced with the same components as recommended in this manual to prevent X-RADIATION, Shock, Fire, or other Hazards.  
Do not modify the original design without permission of manufacturer.

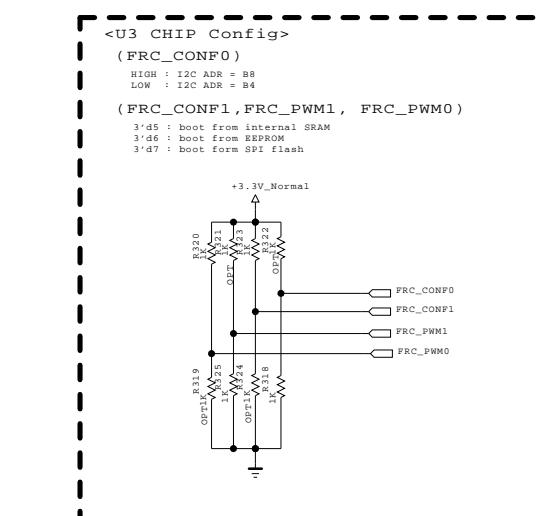

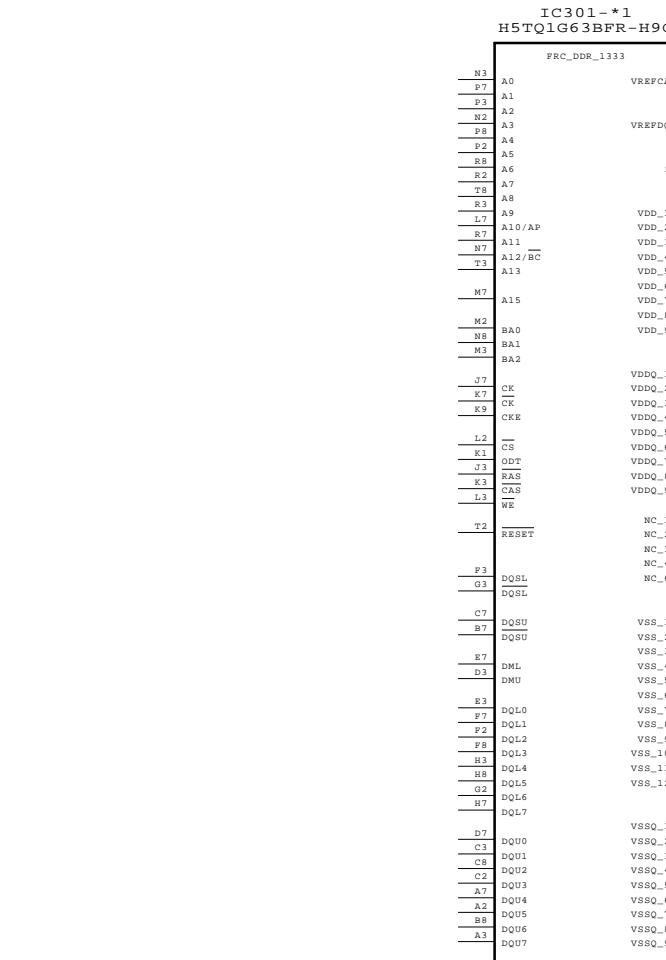

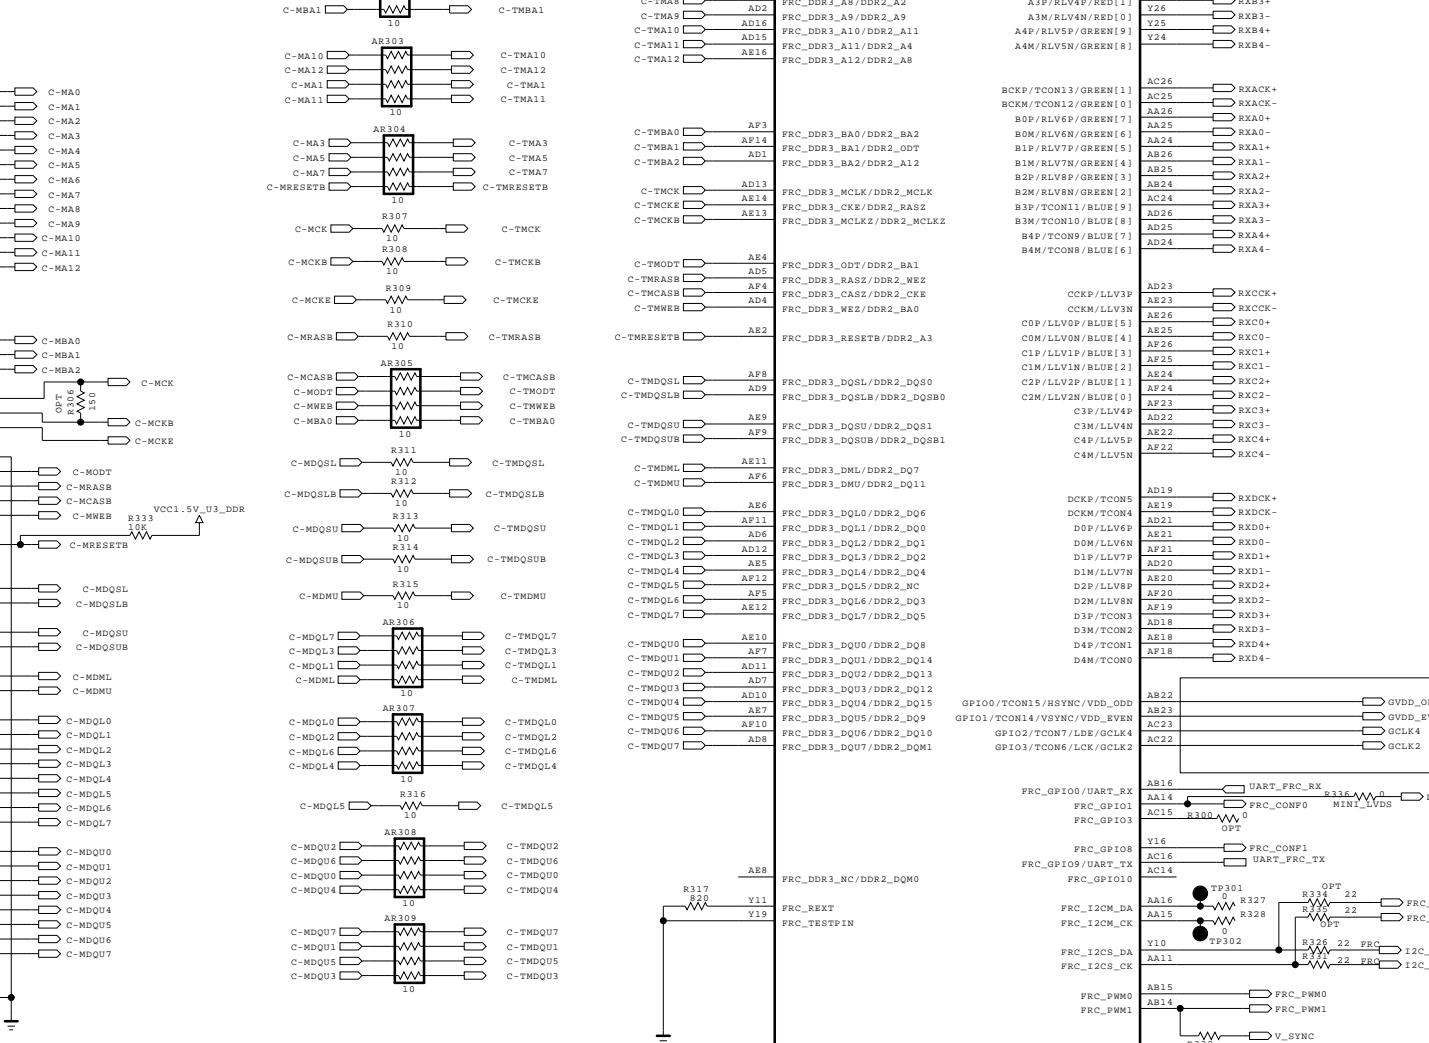

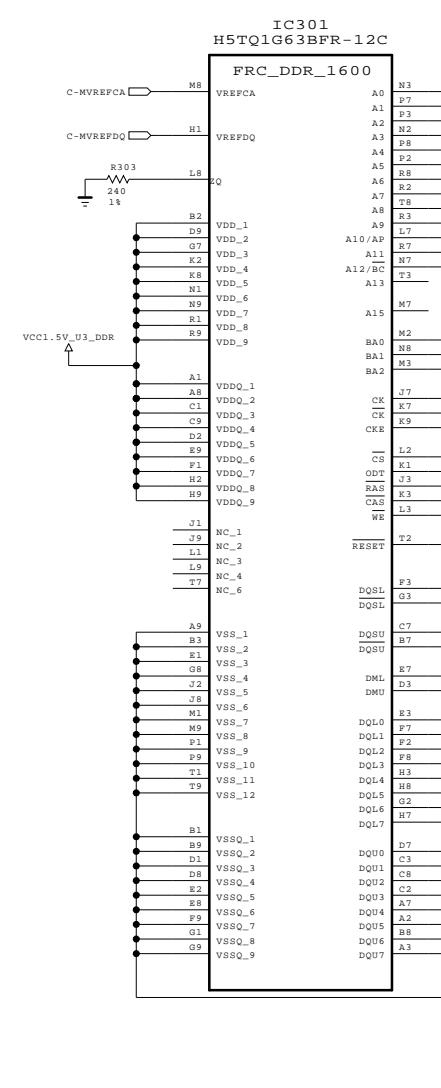

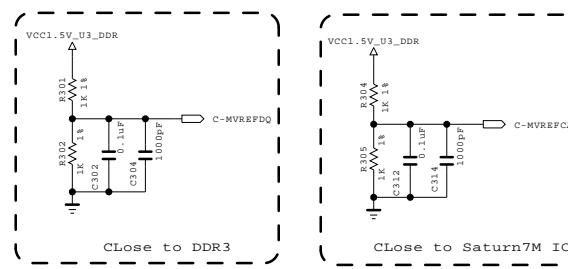

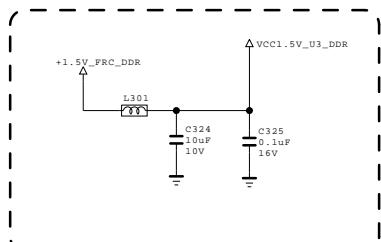

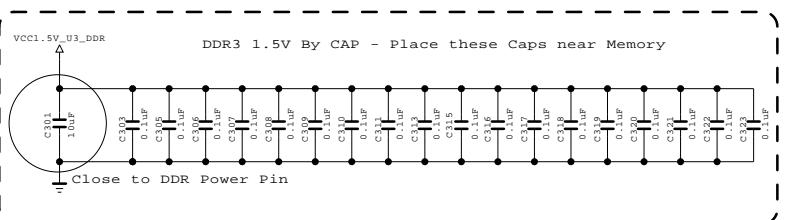

THE SYMBOL MARK OF THIS SCHEMATIC DIAGRAM INCORPORATES SPECIAL FEATURES IMPORTANT FOR PROTECTION FROM X-RADIATION, FIRE AND ELECTRICAL SHOCK HAZARDS, WHEN SERVICING IF IS ESSENTIAL THAT ONLY MANUFACTURES SPECIFIED PARTS BE USED FOR THE CRITICAL COMPONENTS IN THE SYMBOL MARK OF THE SCHEMATIC.

## [ HVDD Block

This diagram shows a detailed schematic of a circuit board, likely a logic board, with various components and signal paths. The board is bounded by a dashed rectangular frame.

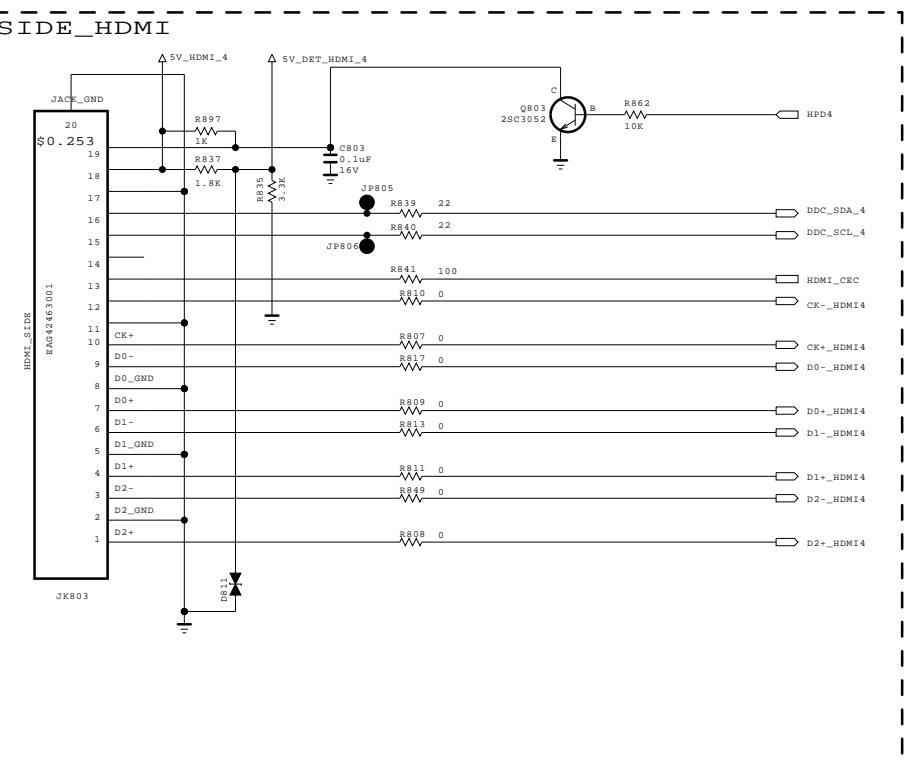

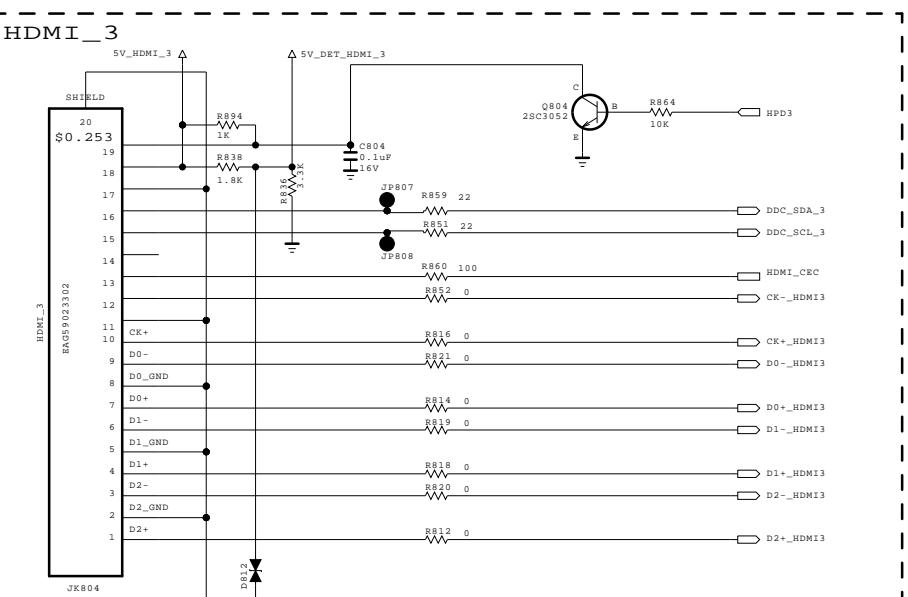

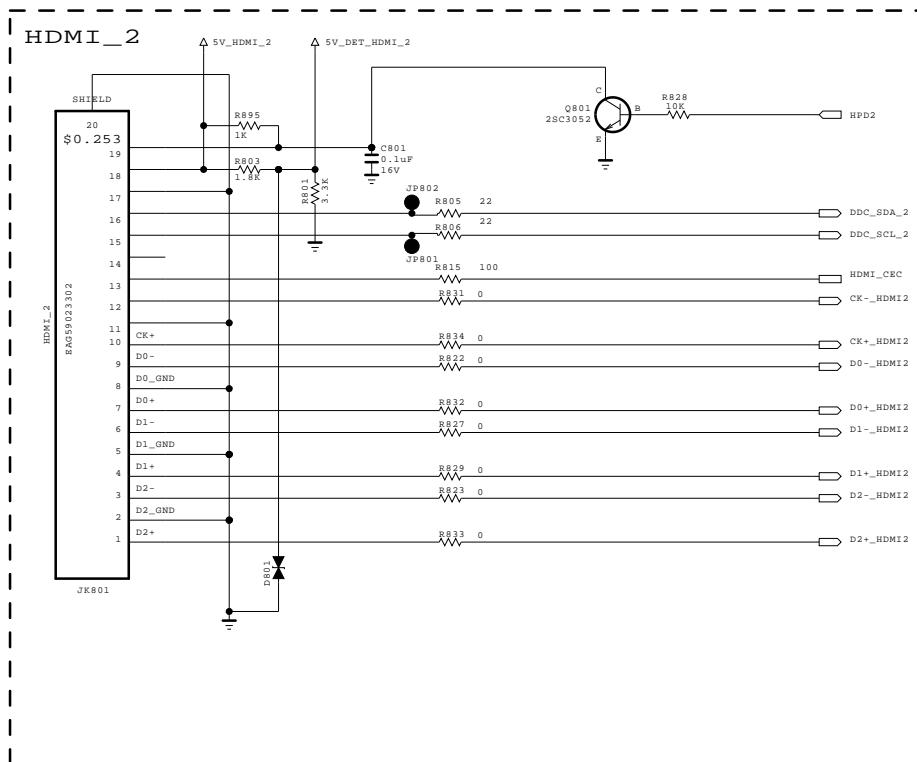

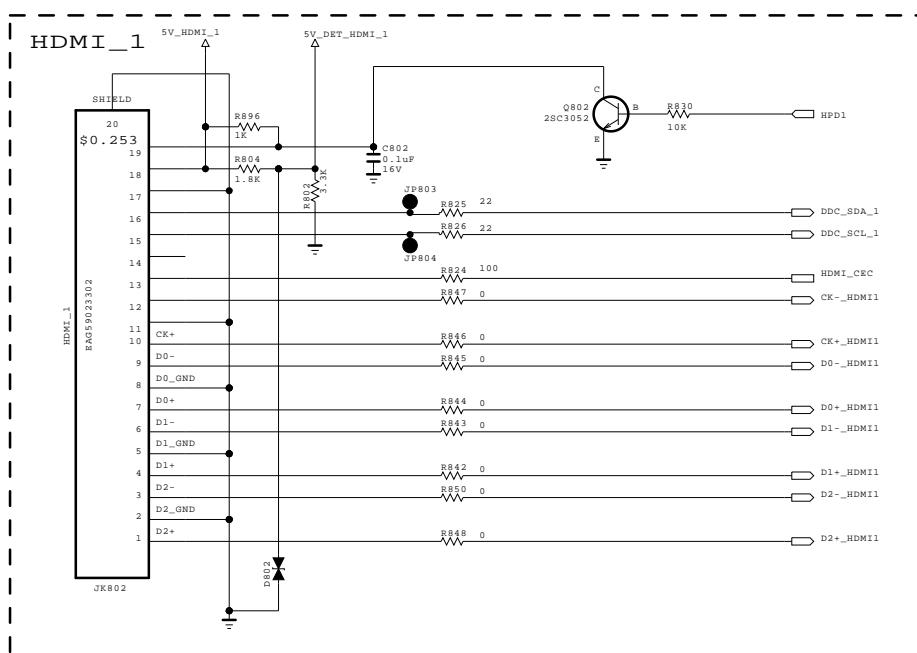

- Power and Ground:**
  - VCC\_LCM (+3.3V) is connected to R628 (3.3K), GIP, RXA3-, and C605 (15pF, 50V, NON\_GIP).
  - VGB (-25V) is connected to R614 (0), GIP, and VGI\_P.
  - VOL (-5V) is connected to R615 (0), GIP, and VGI\_N.
  - VGL (-5V) is connected to R617 (0), R645 (0), OPT, DISCHG, and VGL\_I.
  - RXD4- is connected to R660 (0), C665 (15pF, 50V), and POL.
  - GVDODD is connected to R653 (0), GIP, and GVDD\_ODD\_I.
  - GVEDD\_EVEN is connected to R646 (0), GIP, and GVDD\_EVEN\_I.
  - VCC\_LCM (+3.3V) is also connected to R667 (0), GIP, GCLK2, and GCLK2\_I.
  - VCC\_LCM (+3.3V) is connected to R668 (0), GIP, RXD3-, R685 (NON\_GIP), C667 (15pF, 50V, NON\_GIP), and GSP/GVST\_I.
  - VCC\_LCM (+3.3V) is connected to R669 (0), GIP, R671 (4.7K), GIP, C675 (15pF, 50V, NON\_GIP), and GOE/GCLK1\_I.
  - VCC\_LCM (+3.3V) is connected to R672 (0), GIP, R673 (3.3K), GIP, C676 (15pF, 50V, NON\_GIP), and GSC/GCLK3\_I.
  - VCC\_LCM (+3.3V) is connected to R674 (0), GIP, R675 (15pF, 50V, OPT), and GCLK4.
  - VCC\_LCM (+3.3V) is connected to R676 (0), GIP, R677 (15pF, 50V, OPT), and GCLK5\_I.
  - VCC\_LCM (+3.3V) is connected to R678 (0), GIP, R679 (15pF, 50V, OPT), and GCLK6\_I.
  - VCC\_LCM (+3.3V) is connected to R680 (0), GIP, R681 (3.3K), GIP, C680 (15pF, 50V, OPT), and H\_CONV.
- Signal Path Components:**
  - RXD3- is connected to R659 (0) and GSP\_R.
  - RXDCK is connected to R665 (0) and GSC/GCLK3\_I.
  - RXDCK is connected to R662 (0) and GVDODD.
  - RXA4- is connected to R664 (0) and GCLK4.
  - RXA4+ is connected to R666 (0) and GCLK5\_I.
  - RXA4+ is connected to R667 (0) and GCLK6\_I.
  - RXA3- is connected to R604 (10, NON\_GIP) and FLK.
  - RXA3- is connected to C605 (15pF, 50V, NON\_GIP).
  - RXD4- is connected to R660 (0).
  - RXD4- is connected to C665 (15pF, 50V).
  - GVDODD is connected to R653 (0).
  - GVEDD\_EVEN is connected to R646 (0).
  - GSP/GVST\_I is connected to R685 (NON\_GIP).
  - GSP/GVST\_I is connected to C667 (15pF, 50V, NON\_GIP).
  - GCLK2 is connected to R667 (0).
  - GCLK2 is connected to C670 (15pF, 50V, OPT).
  - GCLK4 is connected to R663 (0).
  - GCLK4 is connected to C673 (15pF, 50V, OPT).
  - GCLK5\_I is connected to R674 (0).
  - GCLK5\_I is connected to C674 (15pF, 50V, OPT).
  - GCLK6\_I is connected to R675 (0).
  - GCLK6\_I is connected to C675 (15pF, 50V, OPT).
  - H\_CONV is connected to R680 (0).
  - H\_CONV is connected to R681 (3.3K), GIP, and C680 (15pF, 50V, OPT).
  - GOE Masking is indicated by a dashed box around R673 (3.3K), GIP, C675 (15pF, 50V, NON\_GIP), and GCLK1\_I.
- Other Components:**
  - DS 17 1K is labeled on the left side.
  - MINI\_LVDS is labeled at the bottom right.
